圣淘沙湾 72 号住宅

72 Sentosa Cove.

This is a home that can endure the tropics with minimal environmental impact, by tapping on available resources. Each level caters to various social and entertainment needs while also accommodating each family member's individual need for solitude.

Achieving space maximization and privacy were also factored into this design, in view of the house's proximity to neighboring units. As a result, the internal spaces face inward into a multifunctional courtyard which acts as circulation pivot and light well, while also serving as a visual focal point. Dense foliage also provides a natural means for additional privacy.

The building's slimmer east and west facades are a contrast to the wide-open north and south ones. This regulates natural lighting and wind ventilation for efficient thermal circulation. A pitched roof, with a series of repeating slopes, also generates additional skylight openings.

And let's not forget that this is first and foremost a home for an active couple and their kids. For this, a lap pool and training room ensure their fitness needs are adequately taken care of.

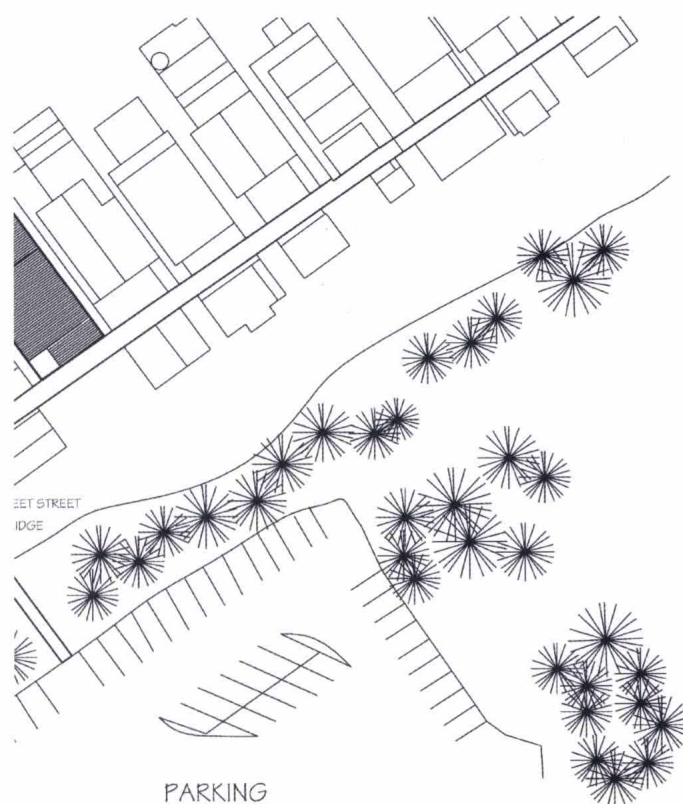

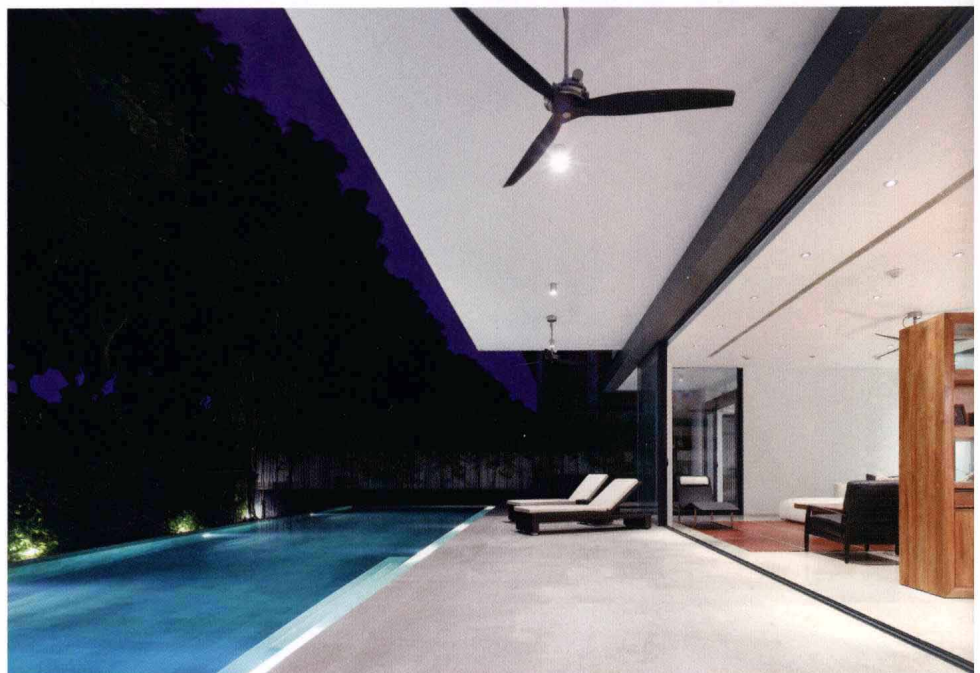

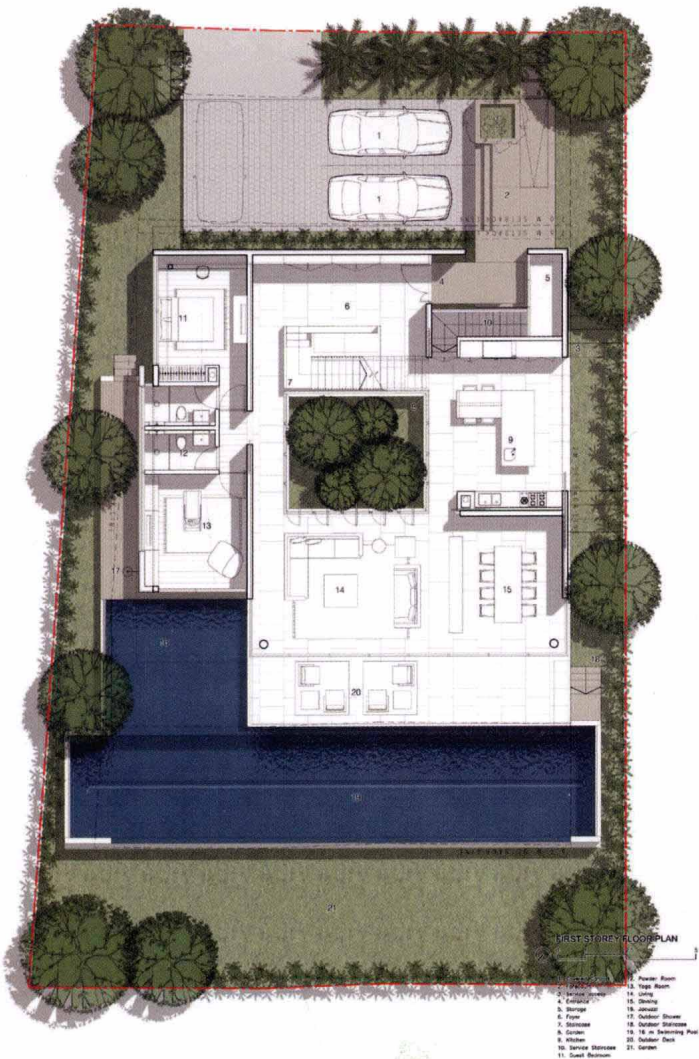

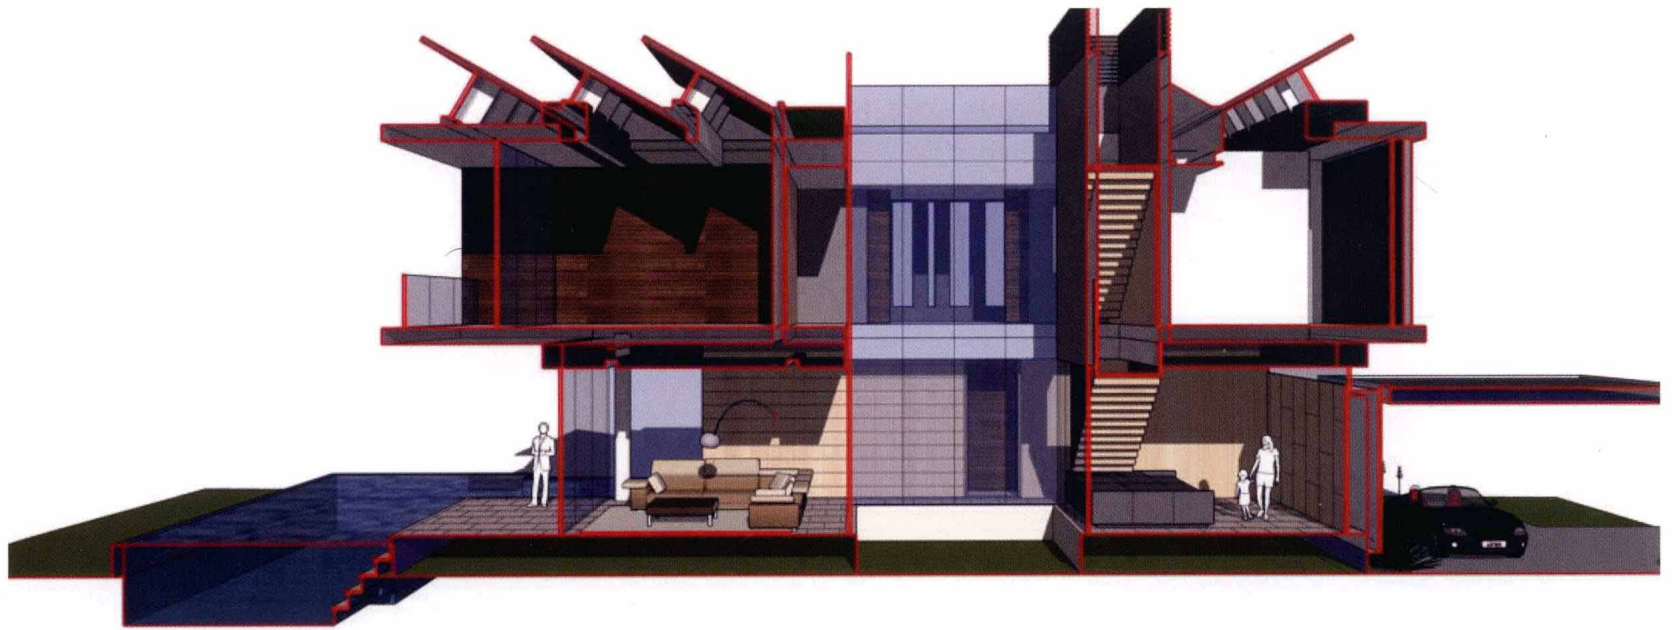

该住宅设计利用现有资源，以在最大程度上减少对环境的影响，同时适应热带气候。建筑各层适应不同的社交与娱乐需要并满足各家庭成员独处的需求。

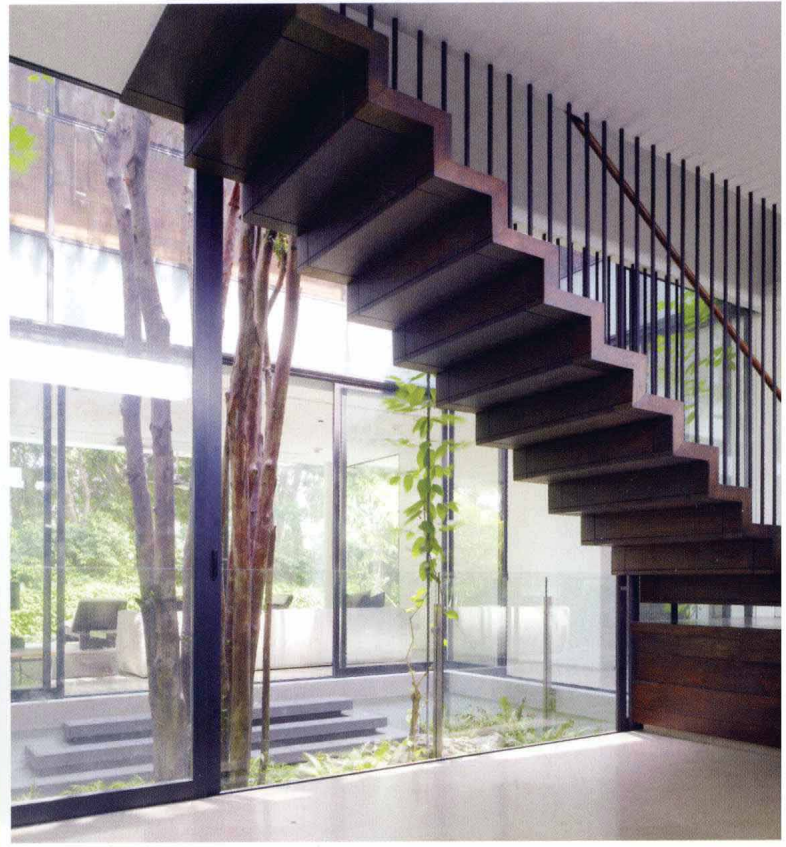

由于住宅与临近房屋的距离非常近，设计上特别考虑到空间利用的最大化与隐私保护。因此，内部空间的开口一律朝向多功能的内庭院。该庭院既是中心与采光天井，也是视觉焦点。同时浓密的树叶成为保护隐私的天然屏障。

建筑细长的东西立面同宽阔的南北立面形成反差。此设计可调节自然光照与通风，实现有效的热循环。斜屋顶上一系列重复的斜面建筑结构形成了附加的天窗。

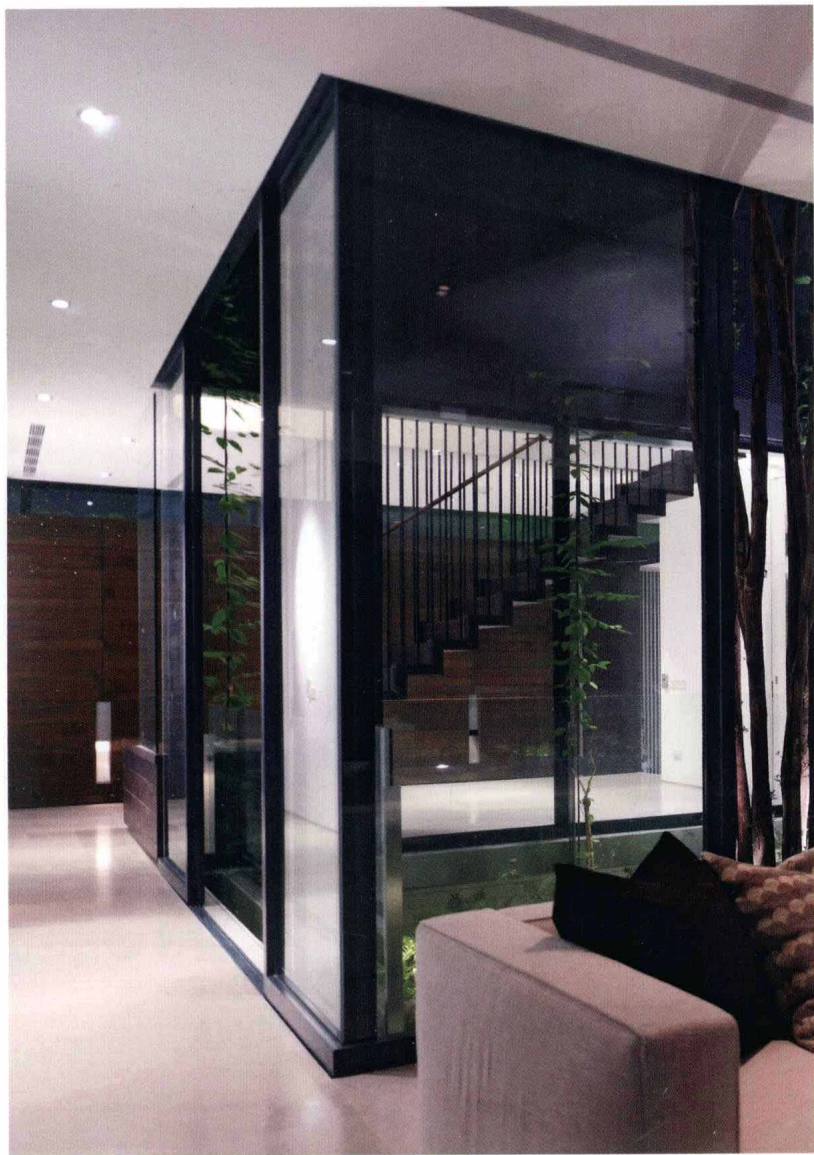

然而设计的首要目的是为一对活跃的夫妇及其小孩打造一个温馨的家。设计师为此特别打造了泳池及健身房，以满足住户的健身需求。

3 Mews 住宅

3 Mews House.

Set in an industrial area of dublin city centre, these three mews dwellings appear from the street as a mysterious, robust and impenetrable mass. The cantilevered upper section is a composition of powder coated metal industrial flooring planks, arranged in varying widths to create a rhythm and have been periodically doubled in depth creating a moire or interference pattern.

Views of foliage and tree tops coming through and over the front screen hint at what lies beyond and it is only as you pass through the metal exterior that the warm light filled heart of the building is exposed. The interior of each dwelling is an experience of colour, light and shadow.

Sustainable elements such as a grey water harvesting system and a boiler linked to an air to water heat pump have been incorporated into the design of each dwelling to maximise the use of renewable energy. All external courtyards drain to this grey water harvesting system located below the upper courtyard to the rear of each dwelling. This harvested grey water is used to feed the irrigation systems to all courtyard planting, WC's and washing machines.
