Preface

Soon after I wrote the first edition of *Educational Psychology*, I had the good fortune to return to a middle school classroom teaching geography to two sections of sixth, seventh, and eighth graders. On my first day back in a K-12 setting, I was quickly reminded of how exciting and energizing the process of teaching growing children can be. This experience confirmed once again what I have always known—that the principles of educational psychology have clear relevance to the decisions a classroom teacher must make on an ongoing basis. How children and adolescents learn and think, how they change as they grow and develop, why they do the things they do, how they are often very different from one another—our understanding of all these things has innumerable implications for classroom practice and, ultimately, for the lives of the next generation.

I have been teaching educational psychology since 1974, and I have loved every minute of it. Because I want the field of educational psychology to captivate you the way it has captivated me, I have tried to make the book interesting, meaningful, and thought-provoking as well as informative. I have a definite philosophy about how future teachers can best learn and apply educational psychology—a philosophy that has guided me as I have written all three editions of this book. More specifically, I believe that you can construct a more accurate and useful understanding of the principles of educational psychology when you:

- Focus on core principles of the discipline
- Relate the principles to your own learning and behavior
- Mentally “process” the principles in an effective manner
- Consider numerous classroom applications of the principles

As I will show you in a moment, I have incorporated numerous features into the book that will encourage you to do all of these things. I hope that you will learn a great deal from what educational psychology has to offer, not only about the students you will be teaching but also about yourself—a human being who continues to learn and develop even now.

Features of the Book

Focusing on Core Principles

Rather than superficially explore every aspect of educational psychology, I have chosen to offer in-depth treatment of the fundamental concepts and principles that have broad applicability to classroom practice. If I myself couldn't imagine how a concept or principle could be of use to a teacher, I left it out. I have highlighted many of the key principles in the *Principles/Assumptions* tables that appear throughout the book.

▲ FOCUSING ON PRINCIPLES

Throughout the text, principles and core concepts are identified, discussed in depth, and then summarized for you in *Principles/Assumptions* tables. Each table includes educational implications and concrete examples.

TABLE 1 Principles/Assumptions		
ASSUMPTION	EDUCATIONAL IMPLICATION	EXAMPLE
Influence of cognitive structure	Encourage students to think about class material in ways that will help them remember it.	When introducing the concept terminal, ask students to identify numerous examples.
Self-efficacy about what is learned	Help students identify the most important things to know to learn. Also help them understand why these things are important.	Give students questions that they should try to answer at the end of the lesson. Include questions that ask them to apply what they just learned to a new problem.
Conceptual change	Provide experiences that will help students make sense of the topics they are studying.	When studying Newton's first law, the teacher asks students to get together in small groups to discuss why Newton's second law is necessary to understand the behavior of objects. They regularly return to acknowledge that he is the father of modern physics.
Use of prior knowledge and belief	Relate new ideas to what students already know and believe about the world.	When introducing the vocabulary word orbit to students, ask them to think of the orbit of a planet around the sun. Then ask them to think of the orbit of a satellite around the earth.
Active involvement in learning	Plan classroom activities that get students actively thinking about and using classroom subject matter.	To help students understand latitude and longitude, ask them to think of the world of latitude and longitude as a grid of latitude/longitude coordinates that they obtain on the Internet.

Relating Principles to Your Own Learning and Behavior

A central goal of this text is to help you discover more about yourself as a thinker and learner. If you can understand how you *yourself* learn, you will be in a better position to understand how your students learn and, as a result, to help them learn more effectively. Throughout the book, I've provided many exercises to help you discover important points firsthand and thereby construct a more complete, meaningful understanding of psychological principles of learning, development, motivation, and behavior. Appearing as *Experiencing Firsthand* features, these exercises are in some ways similar to the "hands-on" activities that can help students learn in elementary and secondary classrooms. But because I ask you to use your mind rather than your hands, you might more accurately think of them as "head-on" experiences.

EXPERIENCING FIRSTHAND

Numerous exercises embedded in the text allow you to experience firsthand some of the concepts and principles we examine. The understanding you gain from these experiences will enable you not only to see more vividly how psychology principles operate, but also to use these principles more effectively in your own classroom teaching.

218 CHAPTER 4

We can solve the candle problem more easily if we enclose it as a "frame" problem than if we try to solve it as a "candle" problem. There are often different ways of encoding the same problem in memory, and these ways of representing the problem in memory—and your focus of encoding—may promote your problem-solving success.

Experiencing Firsthand: The Candle Problem

You are in a room with a bulletin board fixed to the wall about four feet above the floor. Your task is to mount a candle upright in front of the bulletin board. You do not want the candle touching the bulletin board, because the candle's flame over the top of the bulletin board would melt the wax. You need to play the candle about 10 centimeters away from the wall. You can use the following materials:

- small candle
- metal knitting needle
- string
- box of tacks
- box of matches
- rope (six plastic ruler)

See whether you can solve the problem before you read further.

As it turns out, the ruler and knitting needle are useless in solving the candle problem if you try to pass the candle through the knitting needle; you will probably break the candle if you try to balance the candle on the rope, as will probably fall down. The correct solution is to tack the string to the bulletin board with tacks and then attach the candle to the top of the box with either a tack or a wire nail. Many people do not consider this solution, however, because they focus on the box only as a container of tacks, thereby overlooking its potential use as a candle stand. When we reframe a problem in a particular way that excludes potential solutions, we are the victims of a **mental set**.

You may know from your own experience, many students have trouble solving mathematical word problems. One reason is that they often have difficulty encoding a problem in terms of the operation (e.g., addition or subtraction) required (e.g., Mayer, 1992). When students have limited knowledge about a certain topic (e.g., limited conceptual understanding of mathematics), they are likely to encode a problem in terms of the topic on the basis of superficial problem characteristics (e.g., keywords). In the example of Schifield & Terrence (1982) (see example), I encourage being taught as a classroom school that the word *left* in a problem tells you that subtraction is called for. Teaching "left" problem as a subtraction problem works well in some instances, such as this one:

John has 100 dollars. He gives 25 dollars to his friend. How much money does he have left?

But it is inappropriate to collect instances, such as this one:

She was sleeping. She spent \$5 on food. How much money does she have left?

She had \$20. How much money does she have left?

Adapted from Thacker, 1978.

“Processing” Principles Effectively

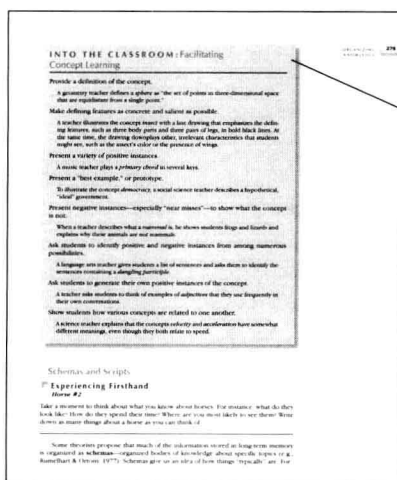

Research tells us that many students, including many at the college level, use relatively ineffective strategies for reading, studying, and learning. But research also tells us that students *can acquire* effective strategies and that when they begin to use such strategies, they find themselves successfully learning and remembering what they read and hear.

One important principle of learning is that people learn and remember new information more effectively when they relate it to what they already know—a process called *meaningful learning*. I will ask you to reflect on your own knowledge and experiences at the beginning of each chapter and in *Thinking About What You Know* features at various other spots throughout the book. In addition, some of the margin notes designated with a  symbol will ask you to consider personal experiences or to recall ideas discussed in previous chapters.

Another effective strategy is *organization*—making connections among the various pieces of information that you’re learning; the *Compare/Contrast* tables that appear throughout the book will help you organize some of the key ideas in each chapter. Still another learning strategy is *elaboration*—expanding on information as you study it, drawing inferences, thinking of new examples, making predictions, and so on. Many of the  questions in the margin will encourage you to elaborate on concepts and principles as I describe them. The  notes in the margin can help you with both organization and elaboration: They may show you how you can connect the material you are reading with ideas presented in later chapters, or they may provide additional, “elaborative” information about those ideas.

Taking Principles Into the Classroom

Throughout the text, I consistently apply psychological concepts and principles to classroom practice. Some of these applications are summarized and illustrated in *Into the Classroom* features and *Students in Inclusive Settings* tables; many others are highlighted with a  in the margin. Furthermore, the  questions will sometimes ask you to consider possible applications in your own specific circumstances as a teacher.

INTO THE CLASSROOM

At least twice in every chapter, teaching strategies are collected and presented together in *Into the Classroom* features. Applying the textbook’s content, these features provide practical teaching strategies and concrete examples from a variety of subject areas and grade levels.

DIVERSITY AND INCLUSION

Each chapter contains a section that examines pertinent issues of diversity and exceptionality. In addition, practical and applied teaching strategies are described in tables that can help you work with *Students in Inclusive Settings*.

As an unlearning Students with Special Needs

We will see evidence of diversity in constructive processes in our students with special educational needs. In addition, students with learning disabilities use constructive processes to manage from stress that they face (Fitzgerald, 1995; J. P. Wilson, 1991). Students with emotional and behavioral disorders use constructive conceptualizations of perceptions of social situations (Hogler, 1998). For example, they might see an act of anger as an instrument of power or fear, an emotion that was unlearned (Table 7.2). Table 7.2 also presents patterns that researchers have found in the constructive processes of students with special needs. It also presents suggestions for helping these students acquire appropriate messages from academic and social situations.

TABLE 7.2 STUDENTS IN INCLUSIVE SETTINGS

Processing Knowledge Construction in Students with Special Educational Needs

STUDENT WITH SPECIAL NEEDS	CHARACTERISTICS THAT MAY BE EVIDENT IN THEIR KNOWLEDGE	CHARACTERISTICS THAT MAY BE EVIDENT IN THEIR BEHAVIOR
Students with learning disabilities	Possible holes in students' knowledge base that may limit meaningful understanding of some classroom topics Occasional content or interpretive misperceptions of peers Occasional misperceptions of social situations	Overuse the same to which students have prior knowledge about a topic, instead of what they do know about the topic Socially maladaptive conceptualizations of power Content misperceptions Present alternative conceptualizations of others' behaviors
Students with emotional and behavioral disorders	Frequent misperceptions of social situations	Present alternative interpretations of others' behaviors and identify suitable sources of action based on the most reasonable interpretation of a given situation
Students with general delays in cognitive and social functioning	Smaller knowledge base from which to draw Difficulty connecting an accurate interpretation when information is ambiguous or incomplete	Assess little if any prior knowledge about topics unless you have someone to help you Social isolation of what they do know about a topic Present information clearly and straightforwardly
Students with limited or no opportunities to interact with the outside world	Limited knowledge base to which students can relate No information, due to fewer opportunities to interact with the outside world	Provide the background information (e.g., field trip) that students need to make sense of classroom subject matter
Students with advanced cognitive development	Larger knowledge base from which to draw Rapid concept learning Create conceptual understanding of cause-effect relationships Greater ability to infer inferences	Accept challenging tasks that enable students to develop and use their advanced understanding of topics Ask thought-provoking questions that encourage critical thinking

In addition, every chapter begins and ends with *case studies*. The case study at the beginning of each chapter presents an example of one or more students dealing with a particular classroom learning task. As we proceed through the chapter, we will continually relate our discussion back to this case, helping you connect chapter content to a classroom context. The case study at the end of each chapter focuses on teachers and teaching; it will help you apply ideas you have encountered in the chapter and make instructional decisions based on what you have learned.

CASE STUDIES

Each chapter opens with a case that is referred to throughout the chapter, helping you tie psychological principles to the authentic context of the classroom. Chapters also end with *case studies* that give you an opportunity to apply what you have learned to teaching decisions.

As we noted before, all of our students—those with special needs and those without—will construct their own unique interpretations of the ideas and events that we construct in the classroom. Many of their interpretations, though perhaps different from one another, may be equally valid and appropriate. But others may not be—due to a simple, butch that they can't see, that their learning may be less than that of some, or that a concept is being to pick a fight—our students may not understand the world around them in ways that are likely to be productive over the long run.

CASE STUDY: Earth-Shaking Summaries

Ms. Jewell spends the last half hour of her seventh-grade geography class describing how earthquakes occur. She introduces the theory of plate tectonics—the notion that the earth's crust is made up of many separate pieces (plates) that are upon a layer of hot, molten rock (the mantle). She explains that plates occasionally slide and rub against each other, making the immediate area shake and leaving faults in the earth's crust.

Her students have listened intently throughout her explanation. When she asks, she asks whether there are any questions. Hearing that there are none, she says, "Great! I'll just give you all a summary. What I'd like you to do now is to take out a piece of paper and write a paragraph answering the question, Why do we have earthquakes?" She has read in a professional journal that asking students to summarize what they've learned often helps them to remember it better later on, and the biggest reason that she has assigned it is as another way to encourage communication.

Ms. Jewell collects students' papers as they leave for their next class. As she glances quickly through the stack, she is distressed by what she sees. Some of her students have provided a relatively complete and accurate description of plate tectonics. But the responses of others are vague enough to make her wonder about how thoroughly they understood her explanation. Here are two examples.

Frank: "The earth's crust shifts around and makes an up and down motion. Earthquakes happen when really big plates on the earth move around."

And three of her students clearly have made little sense of the lesson:

Address: "Students use technology to understand how earthquakes happen. They use computers and stuff."

Ron: "When does an earthquake, people's plates were wanted the lesson."

Jonathan: "Earthquakes aren't anybody's fault. They just happen."

Ms. Jewell sighs, clearly discouraged by the feedback she just gave about her lesson: "I guess I still have a lot to learn about teaching this stuff," she concludes.

- Why do Ms. Jewell not comment that Frank and Mitchell have answered the question? What critical aspects of the lesson did each boy miss in his response?
- What pieces of information from the lesson did Address, Ron, and Jonathan apparently use when answering Ms. Jewell's question? Can you explain their responses using the concept of knowledge construction?
- What instructional strategies might Ms. Jewell have used to help her students gain a more complete understanding of plate tectonics?

QUESTIONS

- In what ways are both message and retrieval construction in action?
- How do learners regulate their knowledge?
- Why do students sometimes acquire more misconceptions about the world, and how do such beliefs affect their learning?
- What strategies can we use to help students construct accurate and useful knowledge about classroom topics?
- What strategies can we use to encourage students to correct any misconceptions they have about the world? In other words, how can we promote conceptual change?
- How are learning processes likely to be different in students with diverse backgrounds and needs?

CASE STUDY: Pulling It All Together

Rita is a fourth grader who attends school in Michigan. Her class has recently had a unit on Michigan's state history. Rita still knows little about American history, so she really did not do so well on the test. She is disappointed because she got ground in history. Rita responds eagerly to an interviewer's question about the New World.

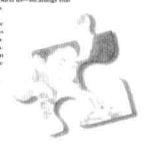

Interviewer: One country in the part of the world called America. Is one name America was called the New World? Do you know why it was called the New World?

Rita: Yeah. We learned this in social studies.

Interviewer: What did you learn?

After you read a conversation with someone like Rita, you may wonder how she got there. Her perhaps you were able to hear her was trying to do well. You realized I could see it, a guesser and feel it, it will know about the topic under discussion. The stimuli around us—message that our interviewee gave us.

more cognitive, simple, process, mental, leaves. From one to a new process in the. All address these.

Changes in the Third Edition

Although most of the content in the second edition remains in the third, I have made several changes to reflect current trends in educational psychology and educational practice. Among the most significant changes to this revision are: the addition of three new chapters, including Learning in the Content Areas, Promoting Learning Through Student Interactions, and Students with Special Educational Needs; new and expanded topics; and a reorganization of Part 3.

New Chapter on “Learning in the Content Areas”

Chapter 9 applies principles of cognitive psychology to learning reading, writing, mathematics, science, and social studies. Four general themes—constructive processes, the influence of prior knowledge, metacognition, and developmental differences—and many content-specific teaching strategies appear throughout the chapter.

New Chapter on “Promoting Learning Through Student Interactions”

Discussion of instructional strategies has been expanded to two chapters, and Chapter 14 is now devoted exclusively to describing interactive approaches to instruction including: communities of learners, class discussions, reciprocal teaching, cooperative learning, and peer tutoring.

New Chapter on “Students with Special Educational Needs”

Chapter 5 describes recent trends in special education and presents numerous strategies for teachers who work in inclusive classrooms. (The “Students in Inclusive Settings” tables that appeared in each chapter of the second edition remain in the third edition as well.)

New and Expanded Topics

The third edition includes new sections on contemporary applications of Vygotsky’s ideas; theoretical perspectives on language development; heredity, environment, and group differences in intelligence; how procedural knowledge is learned; critical thinking; setting events; behavioral momentum; positive behavioral support; self-regulated learning; lesson plans; direct instruction; and working effectively with parents. Discussions of other topics have, of course, been updated in keeping with recent developments in theory and research.

Reorganization of Part 3

Topics related to planning for instruction—identifying instructional goals, conducting task analyses, and developing lesson plans—now appear at the beginning of Chapter 13 (“Choosing Instructional Strategies”) and pave the way for the discussion of instructional strategies. Chapter 15 is now devoted entirely to the topic of “Creating and Maintaining a Productive Classroom Environment.”

Supplementary Materials

Numerous supplements to the textbook are available to enhance your learning and development as a teacher.

Student Study Guide. The *Student Study Guide* provides many support mechanisms to help you learn and study more effectively. These include focus questions to consider as you read the text, a chapter glossary, application exercises to give you practice in applying concepts and principles of educational psychology to classroom settings, answers to selected margin notes, sample test questions, and several supplementary readings.

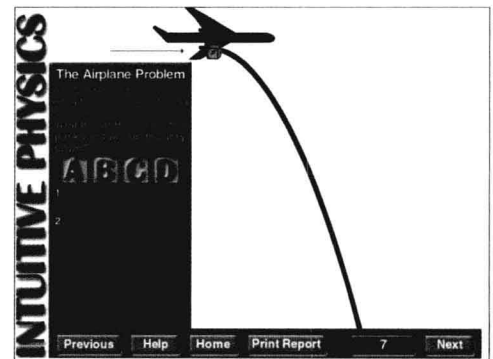

Simulations in Educational Psychology and Research (Compact Disk). A compact disk accompanies the third edition of the textbook. This CD contains four activities that resemble actual research studies in educational psychology: “The Pendulum Experiment” (to be used with either Chapter 2 or Chapter 9); “Assessing Moral Reasoning” (to be used with Chapter 3); “Bartlett’s Ghosts” (to be used with Chapter 7); and “Intuitive Physics” (to be used with Chapter 7, 8, or 9). As you use the CD, you will find yourself “participating” in the activities in much the same way that students in the original research studies did; the CD will ask you to respond to various situations and then give you feedback about your responses. The CD will also help you connect the activity with educational practice.

SIMULATION EXERCISES

CD-ROM icons in the text margins indicate places where one of the simulation exercises on the CD *Simulations in Educational Psychology and Research* is relevant to chapter content. Through these simulation exercises, you will be able to explore learning experiences related to Piaget’s developmental stages, misconceptions and conceptual change, schemas and the construction of meaning, and Kohlberg’s stages of moral development.

Companion Website. You can find the Website for *Educational Psychology: Developing Learners* at www.prenhall.com/ormrod. For each chapter of the book, the Website presents Key Questions that identify the chapter’s central issues, a chapter glossary, key terms linked to Internet destinations, and a quick self-test (multiple-choice and essay questions that let you self-assess what you’ve learned). The Website also provides Syllabus Manager™, which your instructor may use to post and occasionally update the course syllabus, as well as an interactive “Message Board” through which you and your classmates can engage in discussions about chapter content.

Videotapes and MultiMedia Guide. Videos are a highly effective means of visually demonstrating concepts and principles in educational psychology. The eight videotapes that accompany this textbook portray a wide variety of teachers, students, and classrooms in action. Six videos present numerous case studies in many content domains and at a variety of grades levels. Two additional videos are: “A Private Universe” (which examines learner misconceptions in science) and Constance Kamii’s “Double-Column Addition: A Teacher Uses Piaget’s Theory” (which depicts a constructivist approach to teaching mathematics). Opportunities to react to these videos in class discussions will further enhance your ability to think analytically and identify good teaching practices. Your instructor will have a *MultiMedia Guide* to help guide and enrich your interpretation and understanding of what you see in the videos.

Instructor's Manual. Available to your instructor are suggestions for learning activities, additional “head-on” exercises, supplementary lectures, case study analyses, discussion topics, group activities, and additional media resources. These have been carefully selected to provide opportunities to support, enrich, and expand on what you read in the textbook.

Transparencies. The transparencies that your instructor may use in class will include tables and classroom exercises similar to those found in your textbook. These transparencies are designed to help you understand, organize, and remember the concepts and principles you are studying.

PowerPoint Slides and Supplementary Lectures and Activities. Your instructor may use a CD-ROM that includes PowerPoint versions of the transparencies, supplementary lectures, and activities that appear in the *Instructor's Manual*.

Test Bank. Many instructors use the test questions that accompany this textbook. Some items (lower-level questions) will simply ask you to identify or explain concepts and principles you have learned. But many others (higher-level questions) will ask you to apply those same concepts and principles to specific classroom situations—that is, to actual student behaviors and teaching strategies. The lower-level questions assess your basic knowledge of educational psychology. But ultimately, it is the higher-level questions that will assess your ability to use principles of educational psychology in your own teaching practice.

Acknowledgments

Although I am listed as the sole author of this textbook, I have been fortunate to have had a great deal of assistance in writing it. First and foremost, I must thank my editor, Kevin Davis, whose ideas, insights, and clear commitment to the field of educational psychology have provided much of the driving force behind my writing and productivity. Kevin is a task master, make no mistake about it, and he always insists that I stretch my talents to the limit. Yet he also provides the guidance (scaffolding) I need to achieve things that initially seem so impossible. After spending countless hours working with Kevin, I can say that he is not only my editor but also my friend.

I am equally indebted to Linda Montgomery, developmental editor for the third edition, whose extensive experience as both an elementary school teacher and an editor have greatly enriched the quality of this edition. Linda's creativity, commitment to excellence, and ongoing support have always been there for me when I've needed them most. I must thank Linda Peterson as well; as developmental editor for both the first and second editions, she helped define much of the pedagogy of the book. Her continuing insistence on *application, application, application!* kept my focus on the things that future teachers really need to know.

Others at Merrill/Prentice Hall have also contributed in important ways. Copy editor Sue Snyder has gone through my manuscript with a fine-toothed comb and teased out many little places where the text wasn't quite right. Photography editor Nancy Ritz has located many photographs that have given life to the words on the page. And Julie Peters, as production editor for all three editions, has flawlessly coordinated and overseen the entire process of transforming a manuscript into a book—an incredibly complicated task that, in my mind, should far exceed any normal human being's working memory capacity.

In addition, many colleagues across the country have given the book a balance of perspectives that no single author could possibly do on her own. Drs. Margie Garanzini-Daiber and Peggy Cohen provided some of the ideas for the *Students in Inclusive Settings* tables. Dr. Ann Turnball offered many helpful suggestions for enhancing my discussions of students with special needs. Many other individuals have strengthened the final product considerably by reviewing one or more versions of the book.

Reviewers for the first and second editions were Margaret D. Anderson, SUNY—Cortland; Timothy A. Bender, Southwest Missouri State University; Stephen L. Benton, Kansas State University; Kathryn J. Biacindo, California State University—Fresno; Barbara Bishop, Eastern New Mexico University; Karen L. Block, University of Pittsburgh; Robert Braswell, Winthrop College; Randy L. Brown, University of Central Oklahoma; Kay S. Bull, Oklahoma State University; Margaret W. Cohen, University of Missouri—St. Louis; Roberta Corrigan, University of Wisconsin—Milwaukee; Richard D. Craig, Towson State University; José Cruz, Jr., The Ohio State University; Peggy Dettmer, Kansas State University; Joan Dixon, Gonzaga University; Leland K. Doebler, University of Montevallo; Joanne B. Engel, Oregon State University; Kathy Farber, Bowling Green State University; William R. Fisk, Clemson University; Roberta J. Garza, Pan American University—Brownsville; Cheryl Greenberg, University of North Carolina—Greensboro; Richard Hamilton, University of Houston; Arthur Hernandez, University of Texas—San Antonio; Frederick C. Howe, Buffalo State College; Dinah Jackson, University of Northern Colorado; Janina M. Jolley, Clarion University of Pennsylvania; Caroline Kaczala, Cleveland State University; CarolAnne M. Kardash, University of Missouri—Columbia; Nancy F. Knapp, University of Georgia; Mary Lou Koran, University of Florida; Randy Lennon, University of Northern Colorado; Pamela Manners, Troy State University; Hermine H. Marshall, San Francisco State University; Teresa McDevitt, University of Northern Colorado; Sharon McNeely, Northeastern Illinois University; Michael Meloth, University of Colorado—Boulder; Janet Moursund, University of Oregon; Gary A. Negin, California State University; Judy Pierce, Western Kentucky University; James R. Pullen, Central Missouri State University; Gary F. Render, University of Wyoming; Robert S. Ristow, Western Illinois University; Gregg Schraw, University of Nebraska—Lincoln; Dale H. Schunk, Purdue University; Mark Seng, University of Texas; Johnna Shapiro, University of California—Davis; Harry L. Steger, Boise State University; Julianne C. Turner, University of Notre Dame; Alice A. Walker, SUNY—Cortland; Mary Wellman, Rhode Island College; and Jane A. Wolfle, Bowling Green State University.

Coming on board for the third edition were these reviewers: Joyce Alexander, Indiana University; J. C. Barton, Tennessee Technical University; Phyllis Blumenfeld, University of Michigan; M. Arthur Garmon, Western Michigan University; Arthur Hernandez, University of Texas, San Antonio; Mary Lou Koran, University of Florida; Victoria Fleming, Miami University of Ohio; Jennifer Mistretta Hampston, Youngstown State University; Pamela Manners, Troy State University; Bruce P. Mortenson, Louisiana State University; Joe Olmi, The University of Southern Mississippi; Helen Osana, University of Missouri, Columbia; Gregory Schraw, University of Nebraska, Lincoln; Dale H. Schunk, Purdue University; Bruce Torff, Hofstra University; Ann Turnbull, University of Kansas; Glenn E. Snelbecker, Temple University (ancillary material to text); and Karen Zabrocky, Georgia State University.

Last but certainly not least, I must thank my husband and children, who have been ever so patient as I have spent countless hours either buried in my books and journals or else glued to my computer. Without their continuing support and patience, this book would never have seen the light of day.

J. E. O.

Brief Contents

Chapter 1	Educational Psychology and Teacher Decision Making.....	2
PART 1 UNDERSTANDING STUDENT DEVELOPMENT AND DIVERSITY		
Chapter 2	Cognitive and Linguistic Development.....	24
Chapter 3	Personal, Social, and Moral Development.....	74
Chapter 4	Individual and Group Differences.....	118
Chapter 5	Students with Special Educational Needs.....	166
PART 2 UNDERSTANDING HOW STUDENTS LEARN		
Chapter 6	Learning and Cognitive Processes.....	218
Chapter 7	Knowledge Construction.....	264
Chapter 8	Higher-Level Thinking Skills.....	296
Chapter 9	Learning in the Content Areas.....	342
Chapter 10	Behaviorist Views of Learning.....	394
Chapter 11	Social Cognitive Views of Learning.....	434
Chapter 12	Motivating Students to Learn.....	470
PART 3 UNDERSTANDING INSTRUCTIONAL PROCESSES		
Chapter 13	Choosing Instructional Strategies.....	516
Chapter 14	Promoting Learning Through Student Interactions.....	566
Chapter 15	Creating and Maintaining a Productive Classroom Environment.....	596
Chapter 16	Assessing Student Learning.....	632
Appendix A	The Seven Themes of the Book.....	A-1
Appendix B	Describing Relationships with Correlation Coefficients.....	B-1
Appendix C	Interpreting Standardized Test Scores.....	C-1
Glossary	G-1
References	R-1
Name Index	N-1
Subject Index	S-1

Contents

CHAPTER 1

Educational Psychology and Teacher Decision Making	2
Case Study: More than Meets the Eye	4
Oops—A Pretest	4
Answer Key for the OOPS	5
Drawing Conclusions from Psychological and Educational Research	7
Descriptive Studies	8
Correlational Studies	8
Experimental Studies	9
An Example: Research on Visual-Spatial Thinking	9
Drawing Conclusions from Research: A Cautionary Note	11
Deriving Principles and Theories	12
Using Principles and Theories to Make Classroom Decisions	14
Developing as a Teacher	15
Looking Ahead to the Following Chapters ...	17
The Big Picture: Common Themes Throughout the Book	18
Considering Student Diversity	20
Studying Educational Psychology More Effectively	21
Case Study: More Harm than Good?	22
Summing Up	23
Key Concepts	23

PART 1

Understanding Student Development and Diversity

CHAPTER 2

Cognitive and Linguistic Development	24
Case Study: Economic Activities	25
Basic Principles of Human Development	26

Role of the Brain in Development	28
Piaget's Theory of Cognitive Development	29
Piaget's Basic Assumptions	29
Piaget's Stages of Cognitive Development	32
Current Perspectives on Piaget's Theory	40
Vygotsky's Theory of Cognitive Development	43
Vygotsky's Basic Assumptions	43
Contemporary Applications of Vygotsky's Ideas	46
An Information Processing View of Cognitive Development	50
Attention	50
Learning Strategies	51
Knowledge Base	52
Metacognition	53
Comparing Piaget, Vygotsky, and Information Processing Theory	55
Linguistic Development	58
Theoretical Perspectives on Language Development	59
Trends in Language Development	59
Learning a Second Language	64
Considering Diversity in Cognitive and Linguistic Development	66
Accommodating Students with Special Needs	67
The Big Picture: Recurring Themes in Cognitive and Linguistic Development	68
Case Study: In the Eye of the Beholder	70
Summing Up	71
Key Concepts	72

CHAPTER 3

Personal, Social, and Moral Development	74
Case Study: The Bad Apple	75
How the Environment Influences Personal, Social, and Moral Development	76
Personal Development	76
How Parents Influence Their Children's Personal Development	77
Self-Concept and Self-Esteem	79
Developmental Differences in Personality	84

Social Development89
Socialization89
Peer Relationships90
Fostering Social Skills93
Promoting Social Interaction Among Diverse Groups94
Moral and Prosocial Development96
How Emotions Reflect Moral Development97
Development of Moral Reasoning: Kohlberg's Theory98
Gender Differences in Moral Reasoning: Gilligan's Theory103
Development of Perspective Taking: Selman's Theory104
Development of Prosocial Behavior: Eisenberg's Theory106
Integrating the Stages of Moral Reasoning, Perspective Taking, and Prosocial Behavior107
Promoting Moral Development in the Classroom108
Considering Diversity in Personal, Social, and Moral Development111
Accommodating Students with Special Needs113
The Big Picture: Recurring Themes in Personal, Social, and Moral Development113
Case Study: A Discussion of Runaway Slaves116
Summing Up116
Key Concepts117

CHAPTER 4

Individual and Group Differences118
Case Study: Hidden Treasure119
Keeping Individual and Group Differences in Perspective120
Intelligence121
Measuring Intelligence122
How Theorists Conceptualize Intelligence125
Heredity, Environment, and Group Differences131
Being Optimistic About Students' Potential132
Creativity133

Fostering Creativity in the Classroom134
Ethnic Differences136
The Problem of Cultural Mismatch137
Examples of Ethnic Diversity138
Creating a More Multicultural Classroom Environment142
Gender Differences146
Origins of Gender Differences148
Socioeconomic Differences151
Factors Interfering with School Success151
Working with Homeless Students152
Fostering Resilience153
Building on Students' Strengths153
Students at Risk153
Characteristics of Students at Risk154
Why Some Students Drop Out155
Helping Students at Risk Stay in School155
Teacher Expectations158
Effects of Teacher Expectations158
Guarding Against Unwarranted Expectations159
Taking Individual and Group Differences into Account160
Accommodating Students with Special Needs160
Case Study: The Active and the Passive163
Summing Up164
Key Concepts165

CHAPTER 5

Students with Special Educational Needs166
Case Study: Four Students168
Inclusion: Educating All Students in General Education Classrooms168
An Historical Overview of the Inclusion Movement169
Public Law 94-142: The Individuals with Disabilities Education Act (IDEA)169
Is Inclusion in the Best Interest of Students?172
The Current Conception of Inclusion175
General Categories of Students with Special Needs176
Using People-First Language177
An Overall Organizational Scheme177

Students with Specific Cognitive or Academic Difficulties	179
<i>Learning Disabilities</i>	179
<i>Attention-Deficit Hyperactivity Disorder (ADHD)</i>	183
<i>Speech and Communication Disorders</i>	185
<i>General Recommendations for Students with Specific Cognitive or Academic Difficulties</i>	187
Students with Social or Behavioral Problems	187
<i>Emotional and Behavioral Disorders</i>	188
<i>Autism</i>	190
<i>General Recommendations for Students with Social or Behavioral Problems</i>	192
Students with General Delays in Cognitive and Social Functioning.....	193
<i>Mental Retardation</i>	194
Students with Physical and Sensory Challenges	198
<i>Physical and Health Impairments</i>	198
<i>Visual Impairments</i>	201
<i>Hearing Loss</i>	202
<i>Severe and Multiple Disabilities</i>	204
<i>General Recommendations for Students with Physical and Sensory Challenges</i>	205
Students with Advanced Cognitive Development	206
<i>Giftedness</i>	207
Considering Diversity When Identifying and Addressing Special Needs.....	211
The Big Picture: Helping All Students with Special Needs	212
Case Study: Quiet Amy	216
Summing Up	216
Key Concepts	217

PART 2

Understanding How Students Learn

CHAPTER 6

Learning and Cognitive Processes	218
Case Study: Darren's Day at School	220
Looking at Learning from Different Perspectives	221
<i>Learning as a Change in Behavior</i>	221
<i>Learning as a Change in Mental Associations</i>	222

<i>Keeping an Open Mind About Theories of Learning</i>	223
Basic Assumptions of Cognitive Psychology	224
Basic Terminology in Cognitive Psychology	227
<i>Memory</i>	227
<i>Storage</i>	227
<i>Encoding</i>	228
<i>Retrieval</i>	229
A Model of Human Memory	229
<i>The Nature of the Sensory Register</i>	229
<i>Moving Information to Working Memory: The Role of Attention</i>	230
<i>The Nature of Working (Short-Term) Memory</i>	232
<i>Moving Information to Long-Term Memory: Connecting New Information with Prior Knowledge</i>	233
<i>The Nature of Long-Term Memory</i>	234
<i>Critiquing the Three-Component Model</i>	235
Long-Term Memory Storage.....	236
<i>The Various Forms of Knowledge</i>	236
<i>How Declarative Knowledge Is Learned</i>	237
<i>How Procedural Knowledge Is Learned</i>	246
<i>Prior Knowledge and Working Memory in Long-Term Memory Storage</i>	247
<i>Using Mnemonics in the Absence of Relevant Prior Knowledge</i>	248
Long-Term Memory Retrieval.....	250
<i>The Nature of Long-Term Memory Retrieval</i>	251
<i>Factors Affecting Retrieval</i>	252
<i>Why People Sometimes "Forget"</i>	254
Giving Students Time to Process: Effects of Increasing Wait Time.....	257
Accommodating Diversity in Cognitive Processes.....	259
<i>Facilitating Cognitive Processing in Students with Special Needs</i>	260
Case Study: How Time Flies	262
Summing Up	262
Key Concepts	263

CHAPTER 7

Knowledge Construction	264
Case Study: Pulling It All Together	265
Constructive Processes in Learning and Memory.....	266

<i>Construction in Storage</i>	266
<i>Construction in Retrieval</i>	268
<i>Knowledge Construction: An Individual Activity and a Social Process</i>	269
Organizing Knowledge.....	270
<i>Concepts</i>	270
<i>Schemas and Scripts</i>	275
<i>Personal Theories</i>	277
When Knowledge Construction Goes Awry: Origins and Effects of Misconceptions.....	279
Promoting Effective Knowledge Construction.....	281
<i>Providing Opportunities for Experimentation</i>	282
<i>Presenting the Ideas of Others</i>	282
<i>Emphasizing Conceptual Understanding</i>	282
<i>Promoting Dialogue</i>	284
<i>Using Authentic Activities</i>	285
Promoting Conceptual Change.....	286
<i>Identifying Existing Misconceptions Before Instruction Begins</i>	288
<i>Convincing Students That Existing Beliefs Are Inadequate</i>	289
<i>Motivating Students to Learn Correct Explanations</i>	290
<i>Monitoring for Persistent Misconceptions</i>	290
Considering Diversity in Constructive Processes.....	292
<i>Accommodating Students with Special Needs</i>	293
Case Study: Earth-Shaking Summaries.....	294
Summing Up.....	295
Key Concepts.....	295

CHAPTER 8

Higher-Level Thinking Skills.....	296
Case Study: A Question of Speed.....	297
The Nature of Higher-Level Thinking.....	298
Transfer.....	299
<i>Basic Concepts in Transfer</i>	300
<i>Factors Affecting Transfer</i>	301
<i>Theories of Transfer</i>	305
Problem Solving.....	307
<i>Basic Concepts in Problem Solving</i>	308
<i>Cognitive Factors Affecting Problem Solving</i>	312

Critical Thinking.....	319
Metacognition and Study Strategies.....	321
<i>Effective Study Strategies</i>	323
<i>Factors That Affect Strategy Use</i>	332
Considering Diversity in Higher-Level Thinking Processes.....	335
<i>Accommodating Students with Special Needs</i>	337
The Big Picture: Promoting Higher-Level Thinking in the Classroom.....	338
Case Study: Checks and Balances.....	339
Summing Up.....	340
Key Concepts.....	341

CHAPTER 9

Learning in the Content Areas.....	342
Case Study: The Birth of a Nation.....	343
Applying General Principles to Teaching Classroom Subject Matter.....	344
Reading.....	345
<i>Emergent Literacy</i>	346
<i>The Nature of Skilled Reading</i>	346
<i>Developmental Changes in Reading</i>	350
<i>General Strategies for Teaching Reading</i>	350
Writing.....	352
<i>The Nature of Skilled Writing</i>	352
<i>Writing as a Facilitator of Learning</i>	359
<i>Developmental Changes in Writing</i>	359
<i>General Strategies for Teaching Writing</i>	360
Mathematics.....	362
<i>The Nature of Mathematical Reasoning</i>	362
<i>Developmental Changes in Mathematical Understanding</i>	370
<i>General Strategies for Teaching Mathematics</i>	370
Science.....	371
<i>The Nature of Scientific Reasoning</i>	372
<i>Developmental Changes in Science</i>	377
<i>General Strategies for Teaching Science</i>	377
Social Studies.....	380
<i>The Nature of Historical Knowledge and Thinking</i>	380
<i>The Nature of Geographic Knowledge and Thinking</i>	382

<i>Developmental Changes in Thinking About History and Geography</i>	384
<i>General Strategies for Teaching Social Studies</i>	385
Taking Student Diversity into Account	386
<i>Accommodating Students with Special Needs</i>	387
The Big Picture: Revisiting the Four General Principles	387
Case Study: All Charged Up	391
Summing Up	392
Key Concepts	393

CHAPTER 10

Behaviorist Views of Learning	394
Case Study: The Attention Getter	395
Basic Assumptions of Behaviorism	396
Classical Conditioning	398
<i>Classical Conditioning of Emotional Responses</i>	400
<i>Generalization</i>	401
<i>Extinction</i>	402
Operant Conditioning	402
<i>Contrasting Classical and Operant Conditioning</i>	404
<i>Three Essential Conditions for Operant Conditioning</i>	404
Reinforcement in the Classroom	405
<i>Primary Versus Secondary Reinforcers</i>	406
<i>Positive Versus Negative Reinforcement</i>	407
<i>Using Reinforcement Effectively</i>	410
Shaping New Behaviors	412
Effects of Antecedent Stimuli and Responses	414
<i>Generalization</i>	414
<i>Discrimination</i>	415
<i>Cueing</i>	415
<i>Setting Events</i>	415
<i>Behavioral Momentum</i>	415
Reducing and Eliminating Undesirable Behaviors	417
<i>Extinction</i>	417
<i>Cueing Inappropriate Behaviors</i>	418
<i>Reinforcing Incompatible Behaviors</i>	418
<i>Punishment</i>	419
Maintaining Desirable Behaviors Over the Long Run	424

<i>Promoting Intrinsic Reinforcement</i>	425
<i>Using Intermittent Reinforcement</i>	425
Addressing Especially Difficult Classroom Behaviors	426
<i>Applied Behavior Analysis</i>	426
<i>Positive Behavioral Support</i>	427
Potential Limitations of Behaviorist Techniques.....	428
Considering Diversity in Student Behaviors	429
<i>Accommodating Students with Special Needs</i>	429
Case Study: Hostile Helen	431
Summing Up	431
Key Concepts	432

CHAPTER 11

Social Cognitive Views of Learning	434
Case Study: Parlez-Vous Français?	435
Basic Assumptions of Social Cognitive Theory.....	436
The Social Cognitive View of Reinforcement and Punishment.....	438
<i>Expectations</i>	438
<i>Vicarious Experiences</i>	439
<i>Cognitive Processing</i>	440
<i>Choice of Behavior</i>	440
<i>Nonoccurrence of Expected Consequences</i>	441
Modeling.....	442
<i>How Modeling Affects Behavior</i>	444
<i>Characteristics of Effective Models</i>	445
<i>Helping Students Learn from Models</i>	447
Self-Efficacy	450
<i>How Self-Efficacy Affects Behavior</i>	450
<i>Factors in the Development of Self-Efficacy</i>	451
Self-Regulation	453
<i>Components of Self-Regulated Behavior</i>	455
<i>Self-Regulated Learning</i>	459
<i>Self-Regulated Problem Solving</i>	460
Reciprocal Causation	462
Considering Diversity from a Social Cognitive Perspective	465
<i>Using Diverse Models to Promote Success and Self-Efficacy</i>	465
