## EDITOR'S INTRODUCTION

A symposium "to develop, and make recommendations concerning, a national program for systematic evaluation, selection, possible abstracting and/or translation, republication, and dissemination of Russian and East European linguistic literature – with special emphasis on research materials in mathematical linguistics and information processing – for use of the American scholarly community" was held under the auspices of the Indiana University Research Center in Anthropology, Folklore, and Linguistics, on December 2–3, 1960, under a grant from the National Science Foundation. This meeting resulted in a number of formal recommendations which were then referred for further discussion and detailed planning to members of a standing committee established by the conference as a whole. Since 1960, this committee has undergone several alterations both in name and in composition, reflecting a series of changes from a regionally circumscribed approach to one less concerned with specific applications than refashioned to explore implications of the problems of information flow – including storage, retrieval, dissemination, in brief, systems design – in the field of general linguistics. The group is now called the Committee on Linguistic Information. International in membership, it currently functions under the auspices of the Center for Applied Linguistics of the Modern Language Association of America (Charles A. Ferguson succeeded Thomas A. Sebeok as its Chairman, beginning 1963).

The Committee, at its initial meeting, March 6, 1961, discussed a range of agenda including the following recommendation of the original conferees: "... that a series of annual volumes be commissioned to assess the current state of linguistic activity in all fields and all countries in the area with which we are concerned". The undersigned was selected to serve as over-all Editor of the series, which came to be entitled *Current Trends in Linguistics*, and which will continue to be published under the imprint of Mouton & Co.

It was further agreed that the first volume should be devoted to Soviet and East European linguistics. It is intended that future volumes appear at intervals of approximately two years. The second volume, to be published in 1965, will cover East Asian linguistics; it is already in preparation. The third volume – to be consolidated on the basis of twenty-eight lectures which will be delivered in connection with the 1964 Linguistic Institute, at Indiana University – will feature seven topics in general linguistics, each representing an important recent development in linguistic theory or

practice. The fourth and subsequent volumes will revert to the pattern exemplified in the first two, that is, they will assemble parallel materials concerning current trends in linguistics relating to South and South East Asia, the Middle East and Africa, Central and South America, Oceania, and the like.

The present work was designed in consultation with members of our Committee on Linguistic Information and, of course, the three Associate Editors of Vol. I. The Assistant Editor assumed particular responsibility for technical considerations of style (although it must be emphasized that we did not seek absolute uniformity: on the contrary, we encouraged our contributors to write their respective chapters to suit their individual taste on the one hand, and the requirements of their topic on the other). Several manuscripts in need of restatement in English were also assigned to the Assistant Editor, who accomplished this difficult task much to the benefit of the articles in question.

In addition to her other duties, involving extensive correspondence and proofreading, the Assistant to the Editor compiled the Biographical Notes, Linguistic Index, and the Index of Names.

It was originally intended that a further section be included supplying biographical details concerning Soviet and East European linguists, but it was later decided to incorporate the information we were able to gather in the Roster of Linguists being compiled by the Center for Applied Linguistics. Pertinent inquiries may be addressed there.

Part Two was also to have included a chapter on linguistics in Rumania. Regrettably, the colleague invited to furnish this was forced to withdraw at a juncture when it proved too late for us to secure the collaboration of another specialist.

The project was financed by a grant (G19468) from the National Science Foundation to the Indiana University Research Center in Anthropology, Folklore, and Linguistics. This assistance is acknowledged with pleasure. The Editor also wishes to express his gratitude to the twenty-two contributors, his editorial associates, and the staff of Mouton & Co., for their splendid cooperation.

Vienna, July 1, 1963

Thomas A. Sebeok

# PHONEMICS\*

MORRIS HALLE

## I. INTRODUCTION

Soviet phonology has been dominated by three major schools. They are the Leningrad school, whose theories and practice bear considerable resemblance to American post-Bloomfieldian linguistics; the Moscow school, which in many ways parallels Sapir's approach to phonology; and the school based on the phonological theories of R. I. Avanesov, which are an attempt to bridge the gap that separates the Moscow and Leningrad schools. In spite of its many striking resemblances to Western phonology, the roots of Russian phonology are indigenous rather than imported. In fact, it might even be argued that Western and Russian phonology are two parallel developments of ideas originated by the Polish linguist Jan Baudouin de Courtenay during his long tenure as professor in various Russian universities.<sup>1</sup>

In his earlier, Kazań period Baudouin de Courtenay was primarily interested in morphophonemic alternations, which he regarded as the central mechanism of sound change; and morphophonemic alternations have remained the primary concern of the Moscow school, though unlike Baudouin the Moscow school focuses mainly on the synchronic, rather than the diachronic manifestations of these alternations.

While psychological and epistemological problems did not play a particularly important role in Baudouin's early work, they occupy the center of the stage in his later studies. In these studies, he tried to answer the question of the reality of the phoneme by developing the well-known theory of the "psycho-phoneme", which became the cornerstone of the work of Baudouin's student, L. Ščerba, the actual founder of the Leningrad school. For Ščerba and his present-day followers, as for Baudouin in his St. Petersburg period, the phonemes of a language are a small subset of the infinite variety of speech sounds that are emitted in speaking; they are those specific varieties of sound of which speakers and hearers are consciously aware. In

\* The major portion of this essay was written in the fall of 1960 when I was a fellow at the Center for Advanced Study in the Behavioral Sciences, Stanford, California. During that period I also held a fellowship from the J. S. Guggenheim Memorial Foundation. I am grateful to both institutions for their generous support.

<sup>1</sup> Cf. R. Jakobson, "Kazánska szkoła polskiej lingwistyki i jej miejsce w światowym rozwoju fonologii", *Bulletin de la Société polonaise de la linguistique* 19.1-34 (1960).

essence, then, this is the theory of the "broad" transcription, and the study of phonetic detail has been one of the primary concerns of the Leningrad school, as it has been the main interest of Daniel Jones in London and of much of post-Bloomfieldian linguistics in the United States.

In an attempt to neutralize the contradictions between the antithetical positions of the Moscow and Leningrad schools, R. I. Avanesov, originally an adherent of the Moscow school, has in recent years outlined a new position on phonology. His views owe a great deal to proposals discussed at length in the early days of the Prague circle. These proposals are combined by Avanesov in an original manner into a coherent theory which contains a number of new and interesting departures. I regard as especially important the fact that in Avanesov's theory considerations of economy or descriptive simplicity play a significant role in selecting one solution from among possible alternatives.

Since my interest is scientific rather than sociological or historical, I have omitted from consideration phonological doctrines, no matter how well publicized, that lack scientific merit or that have not been developed to a point where a judgment as to their scientific merit can be made. I do not discuss, therefore, such episodes as the Marr school or Stalin's extraordinary intervention in the discussion on linguistics, in spite of their fateful importance for the social history of linguistics in the Soviet Union.

I have made a conscious effort to present the various positions in the best possible light and to support them with what seemed to me the strongest, most convincing arguments. I see little use in concentrating on unessential flaws or outright errors in the writings of the proponents of the views to be surveyed, for I regard my task as understanding the theories of Soviet phonologists rather than scoring points in a debate. In line with this, I have chosen to base my survey on the most clearly formulated, unexceptionable statements that I could discover in the literature. Quite often this has made me forego quoting the works of the major figures in favor of less widely known scholars. Thus, in discussing the views of the Leningrad school I follow Gvozdev more often than I do Ščerba, while my survey of the Moscow school is almost wholly based on a fairly recent paper by Reformatskij, rather than on the historically more important writings of Jakovlev, Avanesov, and Sidorov.

The order in which the various schools are discussed below is governed by considerations for ease of presentation and in no way reflects the historical or scientific priorities of the schools. The survey begins with the Leningrad school since it approaches the classical problems of phonology in the most straightforward fashion. The views of Avanesov are considered next, for these were advanced specifically in order to show the connections between the concerns of the Leningrad and Moscow schools. The views of the Moscow school are then surveyed in the concluding chapter.

No serious attempt was made to discuss in detail the manner in which Soviet developments are related to analogous developments elsewhere. In spite of the
