FOREWORD

IN 1917 the Office of Education first published a compilation of the lists of institutions accredited by national, regional, and State accrediting agencies. A revision of this publication has been issued at approximately 4-year intervals. This edition is the eighth in the series, the last previous edition having been issued in 1944.

The purpose for which this bulletin is issued is to provide information to college and university officers, State department of education officials, and college and high-school students about accredited higher institutions. Increasingly Federal Government agencies are using the bulletin to aid in various phases of their work.

Periodic revisions of the bulletin are necessary to record changes that occur in the lists of accredited institutions, in the standards or criteria by which the agencies evaluate institutions, and in the agencies responsible for accrediting. Since the publication of the 1944 edition, recognized accrediting agencies have extended their activities into the fields of the technical institutes, Bible colleges, and schools and departments of public health.

The lists reproduced in this bulletin were those furnished by the accrediting agencies as of October 1948.

JOHN DALE RUSSELL,
Director, Division of Higher Education.

ACCREDITED HIGHER INSTITUTIONS

1948

INTRODUCTION

ACCREDITATION of institutions of higher education in the United States has for many years operated on three levels: national, regional, and State. On the national level the Association of American Universities has maintained a membership list of 32 universities in the United States.¹ The Association has long maintained an "approved" list of undergraduate colleges whose graduates were considered to be adequately prepared for pursuing graduate study in one of the member institutions. At its October 1948 meeting, the Association voted to abandon the practice of accrediting institutions according to standards set up by the Association. The list of member institutions and the "approved" list effective during 1948 are included in this bulletin.

Accreditation on the national level is also carried on by voluntary organizations in nearly every professional field. For each of the following there is at least one active, Nation-wide professional accrediting organization: Architecture, Bible, business, chemistry, dentistry, engineering, forestry, journalism, law, library science, medicine, music, nursing, optometry, osteopathy, pharmacy, public health, social work, teacher education, theology, and veterinary medicine. These organizations formulate criteria for professional education and publish lists of institutions whose programs are adjudged to be worthy of approval.

There are regional accrediting associations of the voluntary type covering every section of the country. These admit to membership only the institutions that maintain certain announced standards. There is considerable reciprocity in the acceptance of credits among regionally accredited colleges throughout the country, so that a student attending such an institution in one State, and maintaining a satisfactory record, may usually be accepted without loss of credits in an appropriate curriculum at an institution in another State outside the region.

The voluntary accrediting organizations, national and regional, have no legal control over institutions of higher education. They merely promulgate standards of quality or criteria of institutional excellence, and then admit to membership the institutions that meet those standards or criteria.

Most of the States in their governmental organization have set up some plan for the accrediting of institutions of higher education. In a

¹ Included also are two Canadian institutions: McGill University, Montreal, and the University of Toronto, Toronto.

few States an effective control is exercised over the initial establishment of institutions with respect to the availability of adequate resources and equipment, and no college is permitted to begin operations unless it has at least the minimum facilities. In a large number of States, institutions are approved or accredited by State authorities for the preparation of teachers or for education in other professions in which the State certificates or licenses practitioners. There is wide variation in practices among the States. This bulletin reports accreditation for teacher certification and for general purposes in accordance with information furnished by State departments of education.

State universities in most of the States have found it necessary to assume an evaluative function for the other institutions of higher education located within the same State. Their lists reflect practice with respect to acceptance of transfer credits more often than a formal accreditation. As in the case of the State departments of education, there is wide variety in the accreditation practices of State universities. In the tabulation beginning on page 5, accreditation by State universities is shown on three levels: (1) For unconditional admission to graduate school, (2) for full transfer credit, and (3) for partial transfer credit.

In recent years there has been extensive criticism of accreditation, particularly with reference to the increasing number of accrediting agencies and the tendency to accredit individual departmental fields of study in addition to professional schools and colleges. New accrediting agencies, however, are still being organized and are requesting recognition. In the spring of 1948, the Office of Education, in consultation with the Committee on Accrediting Procedures of the American Council on Education, prepared a statement on "Criteria for Recognition of Accrediting Agencies" which will be followed in additions to future issues of this bulletin. The statement follows:

Criteria for Recognition of Accrediting Agencies by the Office of Education

(Prepared in consultation with the Committee on Accrediting Procedures of the American Council on Education)

- I. The accrediting agency should have published criteria for recognizing institutions, and a published list of recognized institutions.
- II. Among other criteria for recognition of institutions, the agency should include:
 - A. A student body beyond twelfth-grade level;
 - B. A faculty with advanced training sufficient for a postsecondary-school program;
 - C. Financial resources sufficient to provide a stable basis for operation;
 - D. Institution legally authorized within its own State to provide a program of higher education;
 - E. Institution's program shall be in operation for long enough time to permit a reasonably critical judgment of its program;
 - F. The minimum length of a program for recognition shall be at least 2 academic years beyond the high school.

- III. Admission to the accredited list should be based on a visit to and a report concerning the institution by competent examiners.
- IV. The agency should have an adequate and systematic means of checking up on those institutions it has recognized, to see that they continue to maintain programs of satisfactory quality.
- V. To be recognized an agency should have been in operation for at least 3 years since the time of its first published list of institutions.
- VI. In principle the Office of Education should recognize only one accrediting agency in any given professional field.

ORGANIZATION OF THIS BULLETIN

This bulletin is divided into two parts. Part I contains a compilation of universities, colleges, junior colleges, and teacher-training institutions accredited by the Association of American Universities, by the regional associations, and by State agencies.

Part II contains lists of professional and technical schools, some or all of the units of which are accredited by or hold membership in the appropriate organization. Accreditation of undergraduate engineering curricula is given in tabular form. Accreditation of the technical institute type of program by the Engineers' Council for Professional Development is presented as a list with accredited curricula indicated.

The American Association of Colleges for Teacher Education is the result of a merger in 1948 of the American Association of Teachers Colleges, the National Association of Colleges and Departments of Education, and the National Association of Teacher Education Institutions in Metropolitan Districts. The new Association adopted the standards of the American Association of Teachers Colleges. The member list appears in Part II.

PART I

Universities, Colleges, Junior Colleges, Teachers Colleges, and Normal Schools Accredited by National and Regional Associations, State Universities, and State Departments of Education

IN EDITIONS of this bulletin issued prior to 1944, the list of institutions accredited by each agency was accompanied by a statement of the standards of accrediting used by that agency. In the 1944 edition the statements of standards were omitted and the accredited lists compiled into a single list. In the present bulletin the single list is used with symbols under different column headings to indicate the agency or agencies by which each institution is accredited. Because of the present length of the association standards, they have been omitted from this edition. Persons interested in obtaining copies of the standards of the several associations may do so by writing to the secretary of the individual association (see pages 60 and 61). Names of the accrediting associations, areas covered, and the effective dates of the lists furnished follow immediately after the tabulation.

Universities, colleges, junior colleges, teachers colleges, and normal schools accredited by national and regional associations, State universities, and State departments of education

Explanation of symbols:

x—Accredited

x-j—Institution offers a 4-year curriculum, but is accredited as a junior college.

x-B—Accredited as Class B.

x-p—Provisionally accredited.

Jr. following the name and address of an institution indicates that the institution is a junior (2-year) college.

**preceding the name and address of an institution indicates that the institution is attended predominantly by Negroes.
