O'Reilly Media, Inc.介绍

O'Reilly Media, Inc.是世界上在 UNIX、X、Internet 和其他开放系统图书领域具有领导地位的出版公司，同时是联机出版的先锋。

从最畅销的《The Whole Internet User's Guide & Catalog》（被纽约公共图书馆评为二十世纪最重要的 50 本书之一）到 GNN（最早的 Internet 门户和商业网站），再到 WebSite（第一个桌面 PC 的 Web 服务器软件），O'Reilly Media, Inc.一直处于 Internet 发展的最前沿。

许多书店的反馈表明，O'Reilly Media, Inc.是最稳定的计算机图书出版商——每一本书都一版再版。与大多数计算机图书出版商相比，O'Reilly Media, Inc.具有深厚的计算机专业背景，这使得 O'Reilly Media, Inc.形成了一个非常不同于其他出版商的出版方针。O'Reilly Media, Inc.所有的编辑人员以前都是程序员，或者是顶尖级的技术专家。O'Reilly Media, Inc.还有许多固定的作者群体——他们本身是相关领域的技术专家、咨询专家，而现在编写著作，O'Reilly Media, Inc.依靠他们及时地推出图书。因为 O'Reilly Media, Inc.紧密地与计算机业界联系着，所以 O'Reilly Media, Inc.知道市场上真正需要什么图书。

出版说明

随着计算机技术的成熟和广泛应用,人类正在步入一个技术迅猛发展的新时期。计算机技术的发展给人们的工业生产、商业活动和日常生活都带来了巨大的影响。然而,计算机领域的技术更新速度之快也是众所周知的,为了帮助国内技术人员在第一时间了解国外最新的技术,东南大学出版社和美国 O'Reilly Meida, Inc.达成协议,将陆续引进该公司的代表前沿技术或者在某专项领域享有盛名的著作,以影印版或者简体中文版的形式呈献给读者。其中,影印版书籍力求与国外图书“同步”出版,并且“原汁原味”展现给读者。

我们真诚地希望,所引进的书籍能对国内相关行业的技术人员、科研机构的研究人员和高校师生的学习和工作有所帮助,对国内计算机技术的发展有所促进。也衷心期望读者提出宝贵的意见和建议。

最新出版的影印版图书,包括:

- 《Web 2.0 策划指南》(影印版)
- 《JavaScript: The Good Parts》(影印版)
- 《学习 ActionScript 3.0》(影印版)
- 《深入浅出 C#》(影印版)

Foreword

Since coming to Adobe, I've spent a great deal of time supporting the release of Adobe AIR. To help developers get up to speed on the new technology, the On AIR Bus Tour visited 18 cities across the United States and a similar AIR tour crisscrossed Europe. Over the course of those many miles and months, we reached a huge number of developers and did our best to help get them started building their own AIR applications.

The community has responded. As of this writing there are over 25,000,000 installs of Adobe AIR and a steady stream of new applications being released. With Adobe AIR 1.5, developers now have access to all of the amazing new features in Flash Player 10, including native 3D support, dynamic sound generation, and Pixel Bender.

To harness this new power, however, developers need learning resources. Although novice developers can get up to speed using the articles and tutorials at the Adobe AIR Developer Center (<http://www.adobe.com/devnet/air>) as well as a few introductory books, intermediate and advanced developers have been largely on their own. There hasn't been a more advanced resource that focuses on providing solutions and code snippets for real-world AIR development—until now. This is why I'm so excited about the *Adobe AIR 1.5 Cookbook*. I've always been a fan of the O'Reilly cookbook series.

Many aspects of this book make it a great reference. To begin with, *Adobe AIR 1.5 Cookbook* is the first book to cover Adobe AIR 1.5, so you can be sure that you will have an up-to-date reference. You couldn't ask for a better group of authors to help teach you the ins and outs of AIR development. An active member of the Flash community, David Tucker has created great video training on AIR for Lynda.com. A frequent speaker on the conference circuit, Marco Casario is an authority on all things Flash, Flex, and AIR. Koen De Weggheleire is a highly energetic Flash Platform expert from Belgium who is also extremely active in the community. Rich Tretola has been involved with AIR from the beginning and is a recognized Flex expert.

Packed with advice from such a trusted team, *Adobe AIR 1.5 Cookbook* will find a permanent home beside my keyboard whenever I'm doing any AIR development.

—Lee Brimelow
Platform Evangelist
Adobe Systems, Inc.

Author Bios

David Tucker is a software engineer with Universal Mind (<http://www.universalmind.com>) and is located in Savannah, Georgia. David's current focus is developing the next generation of rich Internet applications with Adobe AIR, Flex, and Flash. David is the author of the *AIR for Flash Developers* video training series (Lynda.com, 2008). David has worked on a variety of development platforms including ColdFusion and PHP. When David does not have a computer in front of him, he is probably playing guitar. David writes regularly at <http://www.insideria.com>, and his blog can be found at <http://www.davidthucker.net>.

Marco Casario is the founder and CTO of Comtaste (<http://www.comtaste.com>), a company dedicated to exploring new frontiers in rich Internet applications in the enterprise field. He's an Adobe Community Expert, an Adobe Master Instructor for Flex, and a professional speaker at international conferences like Adobe MAX, Flash on the Beach, 360Flex, FITC, AJAXWorld, and Web 2.0 Expo. Marco is the author of *Flex Solutions: Essential Techniques for Flex 3 Developers* (friends of ED, 2007) and *The Essential Guide to AIR with Flash* (friends of ED, 2008), as well as a coauthor of *Advanced AIR Applications* (friends of ED, 2009). He runs his well-known personal blog at <http://casario.blogs.com>.

Koen De Weggheleire is a faculty member of the Technical University of West-Flanders (HOWEST) where he teaches Flash Platform solutions (Flash, Flex, and AIR) with a smile. As the Adobe User Group manager for Belgium (<http://www.adobeusergroup.be>) and Adobe Community Expert for Flash, Koen is heavily addicted to the community; he inspires the community by his blog at <http://www.newmovieclip.com> and by speaking at several events (Adobe MAX, FITC, 360 Flex, Flashbelt, Flash in the Can, and Flash on the Beach). Koen also is a coauthor of *Foundation Flex for Developers* (friends of ED, 2007). When there is still some time left, you can find Koen at his company, Happy-Banana, together with Wouter Verweirder doing Flash Platform consultancy on advanced, award-winning rich Internet applications. When Koen is not talking ActionScript, you can find him producing music, collecting goodies, eating pizza, or renovating his 100-year-old house.

Rich Tretola currently is the rich applications technical lead at Herff Jones. An award-winning Flex developer, he is the lead author of *Professional Flex 2* (Wrox, 2007) and the sole author of *Beginning AIR* (Wrox, 2008). Rich has been building Internet applications for more than 10 years and has worked with Flex since the original Royale beta version of Flex in 2003. Other than Flex, Rich builds applications using ColdFusion, Flash, and Java. Rich is highly regarded within the Flex community as an expert in RIA and is also an Adobe Community Expert. He runs a popular Flex and AIR blog at <http://everythingflex.com>, is the community manager of <http://insideria.com>, and was also a speaker at the Adobe MAX 2007 conference in Chicago. Rich will be speaking at MAX 2008 in San Francisco. For a nontechnical escape, Rich is also a co-owner of a company that manufactures chocolate bars located on Maui named WowWee Maui.

Technical Editor Bios

Ikezi Kamanu is a senior technical consultant at Adobe Systems and longtime RIA enthusiast, with more than 10 years of experience with Adobe technologies. His career in software and multimedia development has been centered on rich, innovative user experiences and overall cool factor. An aspiring “efficiency architect,” Ikezi can be seen near his New York home studying checkout counter queues, taxi patterns, or favorable flight routes for his next great escape. His website is <http://www.efficiencyarchitect.com>.

Aaron Brownlee is a senior technical consultant for Adobe Systems and makes his home in Oakland, California. He started doing web development in 1997, spent a decade orienting objects using Java, and currently dazzles the clients of Adobe Consulting using Flex and AIR. When not causing his MacBook to overheat, he enjoys family, bicycles, and motorcycles. His blog can be found at <http://blogs.adobe.com/viab>.

Peter Elst is an Adobe Community Expert, is a certified instructor, and is active in the Adobe User Group Belgium. As a freelance Flash Platform consultant and respected member of the online community, Peter has spoken at various international industry events and has published his work in leading journals. Most recently, Peter was lead author of *Object-Oriented ActionScript 3.0* (friends of ED, 2007).

Community Contributor Bios

Luca Mezzalira is an Italian Adobe Certified Expert and Adobe Certified Instructor for Flash and Flash Lite. Luca is the owner of M.art3, the first Italian Flash Platform agency that works exclusively on Flex, Flash, AIR, and Flash Lite. M.art3 is based in Padova near Venice, Italy. Luca works with national and international companies on many types of projects utilizing the Flash Platform, from mobile devices to touch screens. He also created a training project, called Let's Course, with other Italian companies that organize courses and important events in Italy. In May 2008, Luca became a consultant for Adobe Italy on the Flash Platform. He writes for national and international technical magazines, and he is a staff member of actionscript.it, the Italian

Adobe User Group. In addition, Luca is a speaker for national and international conferences and community events.

Marin Todorov is a software engineer with experience in building web applications and desktop software going back to the mid-90s. Professionally as a developer and manager, he has utilized various technologies, mostly focusing on the server programming side of the Web. In addition to his career as a developer, he has also been an associate university teacher, and he has written many technical articles and published a book about Perl. Marin started using Flash with version 4 and has been developing desktop software in Adobe AIR ever since its early betas. In his free time, Marin fancies composing music and studying languages.

Jeff Tapper has over a decade of experience developing Internet applications for many clients, including Condé Nast, IBM, and Morgan Stanley. He is an Adobe Certified Instructor for all of their Flex, ColdFusion, and AIR development courses. Jeff has worked as an author on ten books, including *Flex 3: Training from the Source* (Adobe Press, 2008) and *Breaking Out of the Web Browser with Adobe AIR* (New Riders Press, 2008). He sits on the editorial board of Flex Developer's Journal. Jeff is a senior consultant at Digital Primates IT Consulting Group.

Matt Poole is a freelance Flash platform consultant and developer working in London, United Kingdom and is active in the London Flex and Flash Platform user groups. Matt has consulted on making the most of breaking Flash Platform features in the social networking and online gambling arenas, and has more recently been involved in the high profile BBC iPlayer.

Greg Jastrab is a Flex/Flash/AIR developer working at SmartLogic Solutions, LLC, in Baltimore, Maryland. He has been using Flash since Flash 5 and Flex since 1.5. When not coding, Greg enjoys playing poker, guitar, video games, and relaxing with his wife and dog.

Ryan Stewart is a Platform Evangelist for Adobe and lives in Seattle, Washington. He has been doing Flex development for almost five years and has a passion for all things rich Internet application. He has had speaking engagements at industry conferences like Adobe MAX, Web 2.0 Expo, and Web Design World. He also has an industry-leading blog on ZDNet, where he covers all aspects of the RIA space. In his free time, he hikes, goes mountaineering, and codes.

Preface

AIR is a powerful application runtime that lets developers build cross-platform desktop applications in multiple development environments: Flex, Flash, and JavaScript. AIR applications have all the features you would expect from a web application, but in addition, they provide functionality you would expect from a desktop application, including file system access, network monitoring, and an embedded database.

The *Adobe AIR 1.5 Cookbook* exists to help you solve problems. It is not here to explain everything about AIR but rather to be a guide and reference during your AIR development. Like every developer, you will inevitably encounter roadblocks during development, and this book will help you get over the hump.

The challenge in writing this book was to adequately discuss as much of the AIR APIs as possible for each of the three development environments: Flash, Flex, and JavaScript. Because of this, we have chosen to tackle specific areas of AIR development that we think are useful for developers. This book is meant to provide answers for beginning, intermediate, and advanced AIR developers.

AIR 1.5

This book introduces the newest version of the runtime, AIR 1.5. This is the fourth production release of AIR. This new version adds some great tools to the developer's toolset. In addition to many bug fixes, this version includes several new features:

- Support for Flash Player 10: The biggest addition to AIR 1.5 is the support for the new functionality in Flash Player 10 including 3D support, a new type engine, Pixel Bender filter integration, new Sound APIs, and much more.
- SquirrelFish JavaScript interpreter: The new SquirrelFish JavaScript interpreter from the WebKit project provides extremely fast JavaScript execution within AIR.

For more information on the SquirrelFish JavaScript interpreter, visit the WebKit blog here: <http://webkit.org/blog/189/announcing-squirrelfish/>.

- Encrypted SQLite database support: Previously the only way to store encrypted data within the AIR API was to utilize the encrypted local store. Now AIR allows you to store structured relational data inside a SQLite database with AES encryption.
- Extended language support: In addition to the languages that were supported in AIR 1.1, the new release of AIR supports Swedish, Dutch, Czech, Turkish, and Polish.

In this book, you will learn about many of the new features that are included with AIR 1.5.

Flash Player 10 Support

Although we cover the new areas of the AIR API, many of the features within Flash Player 10 are specific to a certain development environment. If you are interested in learning more about 3D support, the new type engine, or the new Sound APIs, be sure to check out the documentation for your development environment (whether Flex or Flash).

Bonus Chapter Online: Developing Mashup AIR Applications

We wanted to strike a balance between providing single solutions for problems and also helping developers build AIR applications for the first time. Because of this, we have provided an additional chapter online that will walk you through the process of creating four different mashup applications with Adobe AIR utilizing the solutions found in this book. This chapter should assist anyone new to AIR in developing a complete application. Go to <http://www.oreilly.com/catalog/9780596522506> to read the bonus chapter.

Who This Book Is For

The *Adobe AIR 1.5 Cookbook* is for intermediate developers who already have an understanding of their specific development environment. That means Flash and Flex developers need to already have a good understanding of ActionScript 3. It also means that JavaScript developers need to have a working knowledge of the language. We have tried to provide background information where it is needed, but without a core understanding of your development environment, many solutions may not make sense.

Every recipe in this book contains code for each development environment. This means that if we are presenting a solution for the File API, we'll provide both the ActionScript and JavaScript solutions. It also means that if we are discussing how to edit the application descriptor file, we will cover how to manually edit the XML file for Flex and JavaScript AIR applications as well as how to use the graphical tool provided in Flash.

Who This Book Is Not For

This book is not for developers who are new to ActionScript 3 or JavaScript. You will need to understand one of these languages. If you are new to Flex, you may want to read *Programming Flex 3* by Joey Lott and Chafic Kazoun (O'Reilly, 2008), and if you are new to ActionScript 3, you may want to check out *Learning ActionScript 3* by Rick Shupe and Zevan Rosser (O'Reilly, 2007). If you are new to JavaScript, you may want to read *Learning JavaScript* by Shelley Powers (O'Reilly, 2006). However, if you are familiar with ActionScript 3 or JavaScript but you have not worked with AIR previously, there is ample material to get you started developing your first application here within the book.

How This Book Is Organized

This book is a collection of recipes intended to be a reference that you can use in your AIR development. Each recipe in this book is a stand-alone solution. However, where needed, the recipe might reference other recipes in the book to provide additional information that may be needed to solve the problem. Our hope is that this book can be a valuable resource in your development by providing quick and easy-to-understand solutions to common problems you may encounter.

This book is essentially divided into four content groupings:

Chapter 1–Chapter 2 give you basic information about how to develop AIR applications in the different development environments as well as how to configure an AIR application's settings.

Chapter 3–Chapter 15 provide solutions for working with the APIs that are included with AIR. This includes the file system, a network monitoring framework, the embedded SQLite database, and much more.

Chapter 16–Chapter 17 give you the information needed to distribute and update your application. This includes using the AIR Update Framework and using the install badges.

The **online chapter** provides information needed to create mashup applications utilizing popular public APIs available to developers.

As mentioned earlier, each chapter provides information for each of the development environments.

Conventions Used in This Book

The following typographical conventions are used in this book:

Menu options

Menu options are shown using the → character, such as File→Open.

Italic

Italic indicates new terms, URLs, email addresses, filenames, and file extensions.

Constant width

This is used for program listings, as well as within paragraphs, to refer to program elements such as variable or function names, databases, data types, environment variables, statements, and keywords.

Constant width bold

This shows commands or other text that should be typed literally by you.

Constant width italic

This shows text that should be replaced with user-supplied values or by values determined by context.

This Book's Example Files

You can download the example files for this book from this location:

<http://www.oreilly.com/catalog/9780596522506>

Where necessary, multiple code samples are provided for each recipe to correspond with the different development environments. Each sample will be separated into a folder for the specific environment. Each application should include the needed code for your environment as well as an application descriptor file.

Using the Code Examples

This book is here to help you get your job done. In general, you may use the code in this book in your programs and documentation. You do not need to contact us for permission unless you're reproducing a significant portion of the code. For example, writing a program that uses several chunks of code from this book does not require permission. In addition, answering a question by citing this book and quoting example code does not require permission. However, selling or distributing a CD-ROM of examples from O'Reilly books does require permission. Incorporating a significant amount of example code from this book into your product's documentation does require permission.

We appreciate, but do not require, attribution. An attribution usually includes the title, author, publisher, and ISBN. For example: "*Adobe AIR 1.5 Cookbook* by David Tucker, Marco Casario, Koen De Weggheleire, and Rich Tretola. Copyright © 2009 David Tucker, Marco Casario, Koen DeWeggheleire, and Rich Tretola 978-0-596-522506."

If you think your use of code examples falls outside fair use or the permission given here, feel free to contact us at permissions@oreilly.com.

How to Use This Book

Development rarely happens in a vacuum. In today's world, email, Twitter, blog posts, co-workers, friends, and colleagues all play a vital role in helping you solve development problems. Consider this book yet another resource at your disposal to help you solve the development problems you will encounter. The content is arranged in such a way that solutions should be easy to find and easy to understand. However, this book does have a big advantage: it is available anytime of the day or night.

The Adobe AIR Cookbook Cook-Off

O'Reilly sponsored the Adobe AIR Cookbook Cook-Off, a chance for developers to submit recipes and win prizes. Many of the top entries have been included in this book, and the winning entry from Greg Jastrab can be found at Recipe 9-13. This contest was open to developers in the United States. Greg's entry was chosen by a group of experts in the RIA development community. Congratulations, Greg!

O'Reilly Cookbooks

Looking for the right ingredients to solve a programming problem? Look no further than O'Reilly Cookbooks. Each cookbook contains hundreds of programming recipes and includes hundreds of scripts, programs, and command sequences you can use to solve specific problems.

The recipes you'll find in an O'Reilly Cookbook follow a simple formula:

Problem

Each problem addressed in an O'Reilly Cookbook is clearly stated, specific, and practical.

Solution

The solution is easy to understand and implement.

Discussion

The discussion clarifies and explains the context for the problem and the solution. It also contains sample code to show you how to get the job done. Best of all, all the sample code you see in an O'Reilly Cookbook can be downloaded from the book's website: <http://www.oreilly.com/catalog/9780596522506>.

To learn more about the O'Reilly Cookbook series or to find other Cookbooks that are up your alley, visit <http://cookbooks.oreilly.com>.

Safari® Books Online

When you see a Safari® Books Online icon on the cover of your favorite technology book, that means the book is available online through the O'Reilly Network Safari Bookshelf.

Safari offers a solution that's better than e-books. It's a virtual library that lets you easily search thousands of top tech books, cut and paste code samples, download chapters, and find quick answers when you need the most accurate, current information. Try it for free at <http://safari.oreilly.com>.

How to Contact Us

Please address comments and questions concerning this book to the publisher:

Acknowledgments

While four of us get to share the cover of the book, we all know that none of this would have been possible if it had not been for the hard work of many people behind the scenes.

I certainly would like to thank everyone at O'Reilly who made this book possible. Steve Weiss gave each of us an opportunity on this book, and his input and guidance has been essential. Dennis Fitzgerald guided most of the development of the book, and his wisdom of this entire process was certainly needed. Also, special thanks are due to Linda Laflamme, Molly Sharp, and Kim Wimpsett, who worked tirelessly to be sure the book was ready on time and in good form. Their work in coordinating the editing effort with authors across two continents and multiple time zones is a testament to their organization, hard work, and skill. In addition, I want to thank Michael Koch, Amy Wong, and Ed Sullivan at Adobe for making the collaboration so easy.

While the authors have contributed some great solutions in this book, the technical editors contributed a great deal of insight and knowledge into making the recipes easy to understand and follow. The work of Ikezi Kamanu, Aaron Brownlee, and Peter Elst

was essential in developing the final recipes. They provided insight into every aspect of the recipes including the code content, the code structure, the wording of solutions, and the structure of the chapters. This book is significantly better because of their input.

From David

This book was truly a collaborative effort between Marco, Rich, Koen, and me. I have learned something from each of them, and I am extremely grateful to have such a great group of coauthors for this book.

I want to thank Steve Weiss for giving me the opportunity to write this book. Steve has been someone who I learned a great deal from, and he has opened many doors for me that would have taken me decades to open by myself. In addition, I want to thank Michael Koch at Adobe for giving me many opportunities to contribute to the Adobe AIR Developer Center. Many highlights in my career were initially brought about by the opportunities he gave me to write. In addition, Rich Tretola has provided a great example to me of how to positively contribute to the developer community in many different ways. Also, I want to thank Jill Parks and Sam Skinner whose wisdom served me well during my time at Georgia Tech, when the book was just in its conceptual stage.

Finally, I have several people to thank in my family: Brian and Kevin for providing a great example to follow, Mom for always providing encouragement, Dad for exemplifying hard work and integrity, and Shannon for being an amazingly patient and supportive wife during the writing of this book. Most of all, to Jesus, who blesses Shannon and me beyond what we deserve, even with suffering, so we could learn to love Him more.

From Marco

My contribution to this book wouldn't be possible without David Tucker, who gave me the possibility to collaborate with him on this awesome book, and of course without the support of the O'Reilly team, specifically, Steve Weiss and Dennis Fitzgerald. I'm amazed by the hard work done by the reviewers of this book. Thanks.

Finally, I would like to thank my girlfriend, Katia, for her patience with all the weekend hours spent on this book in the past months.

I dedicate this book to my mother who taught me to constantly challenge myself yet remain balanced.

From Koen

I really want to thank the dedicated people at O'Reilly for their professional help and guidance. I also want to thank my coauthors—David, Marco, and Rich—for the incredible amount of work they have put into this book to make it the best.

Of course, I also want to thank my colleagues, friends, and family for being supportive and for understanding why I sometimes didn't have enough time for them.

I learned a lot from the community, and I still do, but I am very happy that I can give something back. You know...it's all about giving back to the community!

Happy coding!

From Rich

Special thanks for the hard work of my coauthors—David, Marco, and Koen—and also Steve Weiss for asking me to be part of this book.

I would also like to thank my wife and best friend, Kim, and my daughters, Skye and Coral.
