TABLE OF CONTENTS

OPENING SESSION

P. MELCHIOR / Welcome Address of the Director of the Royal Observatory, Belgium	3
J. DOMMANGET / General Introductory Lecture	5

FIRST SESSION CATALOGUING WIDE PAIRS

M. G. FRACASTORO / The Concept of Star Multiplicity and its Historical Evolution	11
W. J. LUYTEN / Wide Double Stars with Common Proper Motion	17
C. E. WORLEY / Wide Pairs in the Washington Double Star Catalogue (WDS)	21
J. DOMMANGET / The Contribution of the Hipparcos Mission and of the CCDM Catalogue to the Study of Wide Systems	23
E. OBLAK / A Photometric Catalogue of Visual and Multiple Stellar Systems	31
YAN LIN-SHAN / A General Catalogue of Ephemerides and Apparent Orbits for Visual Binaries	39

SECOND SESSION WIDE NEARBY BINARIES

W. GLIESE and H. JAHREISS / The Third Catalogue of Nearby Stars with Special Emphasis on Wide Binaries	49
-----------------------------------------------------------------------------------------------------------	----

A. R. UPGREN / The Search for Wide Pairs Among Nearby Stars	57
S. DÉBARBAT and F. CHOLLET / A Plea for Better Astrophysical and Astrometric Data in Case of Double Stars of Peculiar Interest	61

THIRD SESSION
WIDE COMPONENTS IN MULTIPLE SYSTEMS

A. POVEDA / Distant Companions in Double and Multiple Stars	67
G. N. SALUKVADZE and G. SH. JAVAKHISHVILI / Trapezium-Type Wide Systems	79
A. I. YATSENKO / The Kinematics of Trapezium-Type Systems	85
T. J. HERCZEG / A Survey of the Third Components in Spectroscopic and Eclipsing Systems	89
L. BORRIELLO / Imaging Approach to Multiple Star Recognition: The Algorithm, the Results	97
C. WAELKENS and P. LAMPENS / Physical Parameters of the Massive Multiple System Eta Orionis	99
J. P. ANOSOVA / A Search and Classification of Multiple Systems in the General Field	103

FOURTH SESSION
OBSERVATIONS OF WIDE PAIRS AND THEIR RESULTS

H. A. ABT / Visual Binary Separations as Functions of Primary Types, Ages and Locations	111
K. D. RAKOS and O. G. FRANZ / Photoelectric Observations of CPM Stars in the BVRI System	123
T. MAZEH and D. W. LATHAM / On the Wide Binaries in Selected Area	131
J.-L. HALBWACHS / Studies of a Sample of CPM Stars	139
O. J. EGGEN / Wide Binaries and Old Disk Population Groups	145
N. WIETH-KNUDSEN / Orbit Determination from a Short Arc Through the Coefficients of Power Series in Time	153
H. H. BERNSTEIN, R. HERING, and H. G. WALTER / Astrometric Parameters of Visual Double Stars Derived from Simulated Hipparcos Measurements	161

POSTER SESSION

J. DOMMANGET / Tentative Comments about the Meeting	169
J. DOMMANGET / The Space Arrangement of the Orbital Planes of the Visual Double Stars	171
L. O. LODEN / A Possible Connection between Wide Binaries and Open Clusters	177
A. A. KISSELEV and O. V. KIYAEVA / New Orbits of Four Visual Double Stars by the Method of Apparent Motion Parameters (AMP)	181

M. L. BOUGEARD / Are Double Star Observations The Most Suspicious Ones in the Paris Astrolabe Programme?	185
J. A. DOCOBO and J. F. LING / Visual Double Stars in Professional Spanish Astronomy: Past, present and Future Projects	191
J. A. DOCOBO, A. ELIPE, and A. ABAD / A Method for Calculating the Orbits of Interferometer/Spectroscopic Binaries from Combined data	195
R. B. CULVER and P. A. IANNA / The Frequency of Wide Binaries Among the Southern Barium Stars	199
M. FROESCHLE and C. MEYER / Observation et Résolution du Système Triple η Virginis par la Méthode des Occultations	203
R. PANNUNZIO and R. MORBIDELLI / The Researches at Torino on Wide Double Stars	207
S. WEICHINGER and K. D. RAKOS / Precise Radial Velocity Measurements of Visual Binary Stars	211
M. SCARDIA / Mesures Photographiques d'Étoiles Doubles Visuelles Larges	213
M. SCARDIA / Positions Précises d'Étoiles Doubles Visuelles Larges	215
S. SIREGAR / Software for Calculating Orbit and Mass of Visual Binaries	217
E. W. WEISS / VRI Photometry of Late Dwarf Common Proper Motion Stars	223
D. SINACHOPOULOS, H. NICKLAS, and M. GEFFERT / CCD Suitable for Double Star Astrometry	227
H. ZINNECKER, A. CHELLI, L. CARRASCO, I. CRUZZ-GONZALES, and C. PERRIER / Infrared Companions to Pre-main Sequence Stars	231
J. P. ANOSOVA and V. V. Orlov / Dynamical Evolution of Triple Systems (Scientific Film)	233

FIFTH SESSION
STATISTICAL STUDIES ON WIDE PAIRS

J. L. HALBWACHS / Statistical Studies on Wide Pairs	237
S. VERESHCHAGIN, Z. KRAICHEVA, E. POPOVA, A. TUTUKOV, and L. YUNGELSON / Statistical Study of Visual Binaries	245
P. BROSCHE and D. SINACHOPOULOS / The Optical Fraction of a Hipparcos Sample of Wide Binaries	255
H. HENSBERGE, A. JONGENEELLEN, and R. LE POOLE / Wide Binaries in a Hipparcos Sample Centered Around $b = 0^\circ$, $l^\circ = 300^\circ$	259

SIXTH SESSION
ORIGIN AND EVOLUTION OF WIDE PAIRS

I. WASSERMAN / Theoretical Models for Wide Binary Evolution	267
M. D. WEINBERG / What Can We Learn from Studies of Wide Binary Statistics	277
D. VALLS-GABAUD / Evidence of Mass Loss in Visual Binary Stars	289
Z. KOPAL / Concluding Remarks	305

OPENING SESSION

Word of welcome by the Chairman of the Scientific Organizing Committee, Dr. J. Dommangé

First of all I have the great pleasure to convey to all of you all wishes for a successful meeting from the General Secretary of the IAU, J. P. Swings and from the Assistant General Secretary, D. McNally.

I have also to fulfill a particularly agreeable duty in informing you that the Scientific Organizing Committee at its meeting of yesterday, has unanimously decided to dedicate the present colloquium to our always active colleague here present:

W. J. LUYTEN

who devoted so much of his scientific activity and researches to wide systems. Professor Luyten is so well known that I cannot recall here all what he did not only for double star astronomy, but also more generally for proper motion surveys and white dwarf discoveries.

May I thus immediately ask you, Professor Luyten, to accept this expression of our gratitude.

W. J. Luyten expresses his thanks as it follows:

Je suis profondément touché de l'honneur que vous me faites spécialement parce que pour moi découvrir des naines blanches et des étoiles doubles à mouvement propre commun était une occupation extrêmement agréable, et je vous remercie du fond de mon coeur.

Ik ben diep ontroerd door de eer die gij mij bewezen hebt speciaal juist omdat het ontdekken van witte dwergen en wijde dubbelsterren een van de aangenaamste werkzaamheden is die ik ooit gehad heb en ik zeg U daarom dank uit de grond van mijn hart.

I am profoundly touched by the honor you have conferred upon me especially because the discovery of white dwarfs and wide doubles has always been one of my most pleasant research work, and I therefore want to thank you from all my heart.

WELCOME ADDRESS

P. Melchior

Director of the Royal Observatory of Belgium

It is a privilege for me to address this Colloquium and a great satisfaction to express our gratitude to the Ministers of Education of Belgium, to our National Fund for Scientific Research and, the Unisys Company for the appreciable support given for the practical organization of this Symposium.

We interpret this support as a recognition that, despite the well known difficulties of our epoch, pure scientific research is appreciated by our national authorities.

I then wish to thank this audience of foreign astronomers coming from 17 different countries for their participation, which will let us benefit, during the next five days, from the invaluable contribution of their high level of scientific competence and professional experience in the study of binary stars.

I would like to say that we are proud indeed that, for the second time, the International Astronomical Union has chosen Brussels to have a Symposium organized on binary stars.

The first one was in 1966 with the title 'On the Evolution of Double Stars'. To-day the subject is on 'Wide Components in Double and Multiple Stars'.

In the introduction of the 1966 Symposium, my predecessor the late Professor Velghe reminded in some detail the historical place taken by binary stars studies in the programmes of activity of the Royal Observatory of Belgium.

This started almost exactly one hundred years ago with the measurements by Niesten and Stuyvaert. Most famous have then been the contributions of Van Biesbroeck in the beginning of this century and, since 1935, those of Arend, whom we were especially happy to meet here.

I consider the organization here of a second Colloquium on the same topic as a testimony of the good health of scientific activity in our Royal Observatory. These researches of binary stars have not simply been maintained just like a long tradition by Jean Dommangé, the head of Department of Astrometry and Celestial Mechanics, but which is the most essential, has been efficiently developed in new directions and improved in quality.

Your presence here, dear colleagues, is a priceless encouragement for the Royal Observatory to persevere and to maintain this activity which we all know is of considerable meaning for fundamental astronomy, celestial mechanics, stellar evolution and cosmology.

As it is essentially at the initiative of J. Dommangé that the objectives and the Programme of the present Colloquium have been defined, I will let him now introduce your sessions in his capacity of Chairman of the Scientific Organizing Committee.

But before doing that I wish to express also our thanks to his colleagues of the Local Organizing Committee for their efficient work of preparation.

The Colloquium is yours. I have no doubt that it will be very fruitful.
