The Important Projects by Invited and Imported Investment in Yun County

Project No: Y002

Name: Yellow Ginger Further Development

Content: A newly - built factory for refining double selenium and progesterone from yellow ginger in Raw Seed Farm.

The background of this project:

The farm lies to the east of the city with National Road 209 through its center. It has convenient highway traffic, with a sufficient water supply. In the farm, the Tanjiawan Reservoir can hold 11 million cubic metres of water, and there is also 80 mu of spare land for building factories. With the increase of farmers' market awareness and the quickened steps of industrial structure adjustments in the countryside, the farm has planted 5,000 mu of yellow ginger. The total area of yellow ginger planting reaches 120,000 mu in the whole county. So there are adequate raw materials and broad market prospects for a double selenium and progesterone refining factory.

Investment budgetary estimate:

A total investment of 40 million yuan

Economic returns assessment:

The annual profit of 10 million yuan and a 4-year period of investment recovery.

The Important Projects by Invited and Imported Investment in Yun County

Project No: Y006

Name: The Process and Development of the Ten-thousand-ton Starch Series.

Content: Further development of sweet potato starch products.

The background of this project:

Yunyang Meipu Starch Limited Company, which lies in Quanwan Village, Meipu Town, was set up in 2000. It is an enterprise that mainly produces and processes sweet potato starch, starch vermicelli and so on. It is run by the town government. The factory covers an area of 8,000 square metres, of which 3,000 square metres is for production and 250 square metres for storage. There are 6 sets of main productive installations, which can process fresh sweet potatoes 10,000 tons and produce starch 3,000 tons and Vermicelli 250 tons. However, this cannot meet the processing demand of the local town and the town around. In addition, a great part of the products remain at the primary phase of processing agricultural products and by-products. There is large development space.
