ABSTRACT

There has been a continuing controversy in second language pedagogy over whether and how grammar should be taught in the ESL (English as a Foreign Language) context, implicitly or explicitly. This thesis has explored whether and to what extent learner generated elaboration moves, either explicitly triggered by the elaborative interrogations (Pressley et al., 1987) or implicitly embedded in a “propositional cluster” task (Rutherford, 1987) within the focus-on-form scheme (Long, 1991) may affect learning L2 (second language) English morphological rules. Data in the form of pre-, post-and delayed post-tests’ scores on three morphological rules (third person singular, “-ing” participle and “-ed” participle) were collected from 171 non-English majors from one Chinese university, complemented by the data of learners’ elaborations in form and/or in meaning and also the researcher’s on-going diary and observations notes. The results showed an interactive effect between the complexity of rules (De Keyser, 2005) and the elaboration demands, among which the explicit learning, represented by the learner-generated form or/and meaning elaborations, had an obvious advantage over the teacher fully-controlled explicit teaching and also over implicit learning when the rule “-ed” participle was difficult for the learners. In addition to examining the features of the three target rules on learning, the analysis mainly focused on the effect of elaborations, either by teachers or learners, either in form or in meaning, on grammar learning in terms of the role of learners’ prior knowledge in SLA. The effect of learners’ learner generated elaborations on learning the morphological rules were discussed in terms of the role of formulaic knowledge (N. Ellis, 1996), linguistic knowledge (De Keyser, 2003) and semanticity of rules (Anderson & Reder, 1979; Van Patten, 1996). The findings have shown a dynamic learning process with both conscious and unconscious processes (N. Ellis, 2005) and also have confirmed the possibility and efficiency of generalizing the elaboration model (Anderson, 1983a, 1983b) in SLA.

Although the study has certain limitations, it does suggest that syllabus designers and teachers in SLA should take serious account of the role of learners’ prior knowledge in learning, thereby optimizing instruction in a non-obtrusive manner (Doughty, 2003) while providing chances to maximize the process of learner-generated elaborations, that is the cognitive engagement of the learner in the learning process.

从认知角度解读以学生为中心的二语学习

提 要

在第二语言教学中长期存在着一个关于语法教学的争论，即我们是否应该教授学生语法和如何教授语法，是隐性教授还是显性教授。本命题从认知语言学的角度详细地分析、论证了成人学生自我学习语言的可能性。通过比较隐性的任务法、显性的提问法以及教师完全讲解对学生学习三条英语语法的影响，本命题旨在探索以学生为中心的自我推敲方法对英语学习是否有着长期的影响。对 171 个非英语专业大学生的前试、后试及延迟性后试的测试结果和其他描述数据的分析显示：

- (1) 和教师完全讲解方法相比，学生自我推敲方法对学习三条语法有着明显的作用；
- (2) 和隐性的推敲方法相比，显性的推敲方法对学习“-ed”分词有着明显的作用；
- (3) 学习模式和语法的复杂性有着交互作用。

对该研究结果的分析表明：学生的已有知识，不论是语音的、语法的还是词汇的知识对语言学习都有着十分重要的作用。尽管该研究有着一定的局限性，但它已清楚地表明：教师在教学中应该认真考虑、利用学生的已有知识，尽可能地让学生完全融入语言学习的过程中。

CHAPTER ONE

PURPOSE OF THE STUDY

The “better” processing is that which generates more elaborations of the input that can be interpreted at retrieval.

— Anderson and Reder (1979, p. 390)

Conscious and unconscious processes are dynamically involved together in every cognitive task and in every learning episode.

— N. Ellis (2005, p. 340)

1.1 RESEARCH BACKGROUND

I taught English to University students in China for eight years. Over this time, I was often puzzled by various questions that students asked, especially when they asked about any short-cuts or any effective ways in learning English. Both my students and I were very upset when we felt their achievements in learning English were below expectations, despite the fact that they “had spent the majority of their study time on English”. Therefore, I often wondered whether it was possible to teach students in a more effective way. Inspired by my personal experience to begin this research, I intended to see whether it is possible to introduce more effective approaches into traditional ESL (English as a Second Language) classrooms in China.

1.1.1 ESL Background in China

In China, teaching English as a second language has a long history. Since 1979, when China adopted the policy of reformation and opening, Chinese have become increasingly aware of the need to improve their foreign language abilities, particularly in regard to English, because this language is used widely across nations. For companies looking to recruit staff, a high level of English proficiency is a desirable attribute in prospective employees. Therefore, in order to meet
