About the Author

Todd Stauffer is a full-time freelance writer based in Colorado Springs, CO. He's written non stop since graduation from Texas A&M University, where he studied English Literature and Management Information Systems. Since that time, he's been an advertising copywriter, magazine columnist, and magazine editor, all in computing fields.

Todd is currently the Internet columnist for *Peak Computing Magazine*, and host of the Peak Computing Radio Hour on 740AM in Colorado. He's the author of *HTML By Example*, *Creating Your Own AOL Web Pages*, *Using the Internet with Your Mac*, *Using Your Mac*, *Easy AOL*, *Using PageMill 2*, and, co-author of a number of other titles, all published by Que. In his spare time, he thinks of new and interesting ways to fund his health insurance and write-off exotic vacations as tax-deductible. He has no cats, although other people's cats are always bothering him.

Todd can be reached via e-mail at **tstauffer@aol.com** or through his personal Web site at **<http://members.aol.com/tstauffer/>**.

Acknowledgments

This book's first edition was written by Neil Randall, and much of his work remains. He wrote an excellent text that only needed some slight revisions and updates for the latest and greatest on the Web. I owe him a debt for making this project so easy.

Special thanks go to everyone at Que who helped me on a tight schedule. Cheryl Willoughby, acquisitions manager, did her usual calm and collected job of helping me manage to stay sane, eat regularly, and, eventually, get words on a page. Philip Westcott, acquisitions editor, handled the day-to-day flawlessly. Thanks also the Mark Cierzniak for keeping the contents on track.

The rest of the Que staff is invaluable in any project, including production editor Heather Urschel, and technical editor Bill Bruns.

Thanks one more time to the folks at *Peak Computing Magazine* and the *Colorado-Springs Gazette-Telegraph* for giving me the regular checks, encouragement, support, and regular checks.

I'd like to thank my good friends Aaron and Ryan for trying their best to make the baseball playoffs last long enough that I could get a glimpse.

Finally, big thanks to Donna Ladd for support, understanding, and the occasional adult beverage. Like Winston Churchill might have said, this beats having a real job.

We'd Like to Hear from You!

As part of our continuing effort to produce books of the highest possible quality, Que would like to hear your comments. To stay competitive, we *really* want you, as a computer book reader and user, to let us know what you like or dislike most about this book or other Que products.

You can mail comments, ideas, or suggestions for improving future editions to the address below, or send us a fax at (317) 581-4663. For the online inclined, Macmillan Computer Publishing has a forum on CompuServe (type **GO QUEBOOKS** at any prompt) through which our staff and authors are available for questions and comments. The address of our Internet site is **<http://www.mcp.com>** (World Wide Web).

In addition to exploring our forum, please feel free to contact me personally to discuss your opinions of this book: I'm **mcierzniak@que.mcp.com** on the Internet.

Thanks in advance—your comments will help us to continue publishing the best books available on computer topics in today's market.

Introduction 1

Part I: An HTML Tutorial 5

1 Introduction to HTML and Web Publishing 7

How Web publishing works 8

The lowdown on HTML 10

 Hypertext revealed 11

 Hypermedia explained 14

The little numbers after “HTML” 15

 The HTML argument 16

 HTML 2.0 yesterday, HTML 3.2 tomorrow 17

 Making your design decisions 18

Creating and saving your pages 19

 Everyone needs a good editor 19

 Naming your files 20

 Structural integrity 21

*The
lowdown
on HTML*

see page 10

**2 In the Beginning: Up Front with Tags, Titles,
and Heading 23**

Playing tag for fun and profit 24

 Your very first HTML code 24

 Browsing from home 25

 Your second HTML code 26

 Containing your excitement 27

Every Web page has the same basic
structure 28

 Don't forget the HTML element 29

*Every Web
page has
the same
basic
structure*

see page 28

**Headings
help the
reader find
what's
there**

see page 39

**Link to
other
Internet
services**

see page 58

Getting a HEAD	30
Your Web page's title	31
Functional titles	32
The <ISINDEX> tag	33
The <BASE> tag	34
What's NEXTID?	34
The <LINK> tag	35
What's a META for?	35

3 Entering Text and Formatting Your Page 37

How the body section works	38
Headings help the reader find what's there	39
Inserting breaks in your text	40
Using paragraph breaks	41
Quick line breaks	42
More control with preformatted text	44
The PRE element	44
The BLOCKQUOTE element	45
Getting direct control over your text	46
What's so logical about logical styles?	47
Beyond the basics: Font size	49
Horizontal lines break up the page	50
Beyond the basics: HTML 3.2 line attributes	51

4 Linking Your Pages to Other Internet Services 53

The Uniform Resource Locator (and what that means)	55
Putting hyperlinks to use	55
Web page links	56
Linking within documents	57
Link to other Internet services	58
One click e-mail	59
Creating a link to an FTP site	61
Gopher servers	62

Link to newsgroups	63
Log on to remote computers with Telnet	64
Beyond the basics: the <BASE> tag	65

5 Adding Graphics to Your Page 67

Adding graphics	68
Graphics help your Web pages	69
The IMG element lets you insert graphics files	69
Aligning text next to images	72
HTML 3.2's floating images	74
Remembering our text-based friends	77
Other fun with 	78
Beyond the basics: Clickable images	79
One more HTML 3.2 addition: BORDER	79

Part II: Designing Your Pages for Audience Appeal 81

*In HTML,
you have
five kinds
of lists*

see page 85

6 I Have This List, See 83

In HTML, you have five kinds of lists	85
Lists by the number: Ordered lists	85
Bullets over bandwidth: Unordered lists	87
Double duty: Definition lists	89
Combining similar and different lists	93
Beyond the basics: List extensions	94
Numbered list add-ons	95
Bulleted list add-ons	97

7 Making Graphics, Text, and Color Work Together 99

Choose your images for clarity	101
What about the size of the graphics of my pages?	103
Make the picture smaller	103
Put 'em in smaller files	104

Beyond the basics: Animated GIFs

see page 114

Creating interlaced and transparent GIF graphics	105
Consider transforming your text into graphics	107
Give your readers some buttons to navigate by	108
Putting graphics in the background	110
Adding a little color	111
Coloring your canvas	111
Making text readable in a color world	112
Creating colorful words	113
Beyond the basics: Animated GIFs	114

Part III: Advanced HTML 117

8 Imagemaps for Eye-Catching Hyperlinks 119

Just what is an imagemap?	120
How do I create an imagemap?	123
Start with an appropriate image	124
Supported graphic file formats	125
The ISMAP attribute starts the imagemap process	126
How to create the imagemap file	128
Using special programs to define the map	128
Other programs for coordinates	129
The completed map definition file	130
Here's what happens with the actual map files	132
WWW tools: MapMaker	132
Beyond the basics: Client-side maps	133

9 Tabling Your Data 137

So, what are tables good for?	138
Start small and work your way up	139
Deciding what your table will look like	140

Some great tables served on the Web

see page 150

The data cell and the heading cell	141
Alignment of cells	141
Spanning cells	142
Vertical alignment	142
Table rows	145
Captions	145
What else can I do with tables?	147
Page layout with tables	147
Some great tables served on the Web	150
Beyond the basics: Coloring your table	153
10 Please Fill Out This Form	157
First, there's something called CGI	158
Okay, back to forms themselves	159
Here are the basic elements of a form	159
The very first thing—the FORM tag	159
Let 'em write: Allowing users to input free-flow text	161
Giving users choices	163
Gathering <INPUT>	165
Typed TEXT from users	165
What's the PASSWORD?	166
Yes or no...CHECKBOX	167
Tuning a single choice...RADIO	167
Keeping things sorta HIDDEN	168
Erasing the whole thing...RESET	168
SUBMIT	169
Cheating 101: Looking at other people's HTML	170
Beyond the basics: Client-side forms	170
11 Introduction to CGI	173
What is CGI?	174
A CGI success story	175
Why reinvent the wheel?	176
Pick a language, almost any language	176

CGI in the real Web world

see page 185

Here are a few CGI examples	177
First, a simple example	178
Installing and referencing a CGI script	179
Now for a dynamic example	180
Making use of data provided by the server	181
Making use of input supplied by your readers	183
CGI in the real Web world	185
Commercial sites	185
The public domain	185
The cutting edge	187

Part IV: Bells and Whistles 189

The idea behind frames

see page 192

12 You've Been Framed 191

The idea behind frames	192
Creating the frames	193
Getting stuff to appear in the frames	195
Creating a template	196
Tweaking your frames	197
Sending text to our non-frame buddies	198
Getting new pages to load in frames	199
Giving your frames a NAME	199
Sending new pages to named frames	200
Give your users an out (or a back)	200
An elegant example of frames	201
Beyond the basics: Advanced targeting	203
Cut down on typing with <BASE> targets	204
Unveiling the "magic" targets	204

Setting your page up for style sheets

see page 209

13 Ultimate Control: Style Sheets 207

Why add to the confusion?	208
Setting your page up for style sheets	209
Creating CLASSES	210
Defining SPAN	211

So what kinda stuff can you do?	212
Rolling style sheets into your pages	214
A few other style sheet tags	215
Style overrides	216
Divisions and the ALIGN Attribute	216
Beyond the basics: LINKing your style sheets	218

14 Going Nuts with Multimedia and Java 221

Finding (or creating) multimedia stuff

see page 226

What's a hypermedia link?	222
Creating the hypermedia link	223
What files are multimedia files?	224
Finding (or creating) multimedia stuff	226
Making a little sound of your own	226
Recording sounds in Windows 95	226
Recording sounds with the Mac OS	227
Converting sounds with SoundApp for Macintosh	228
Digging up sounds on the Web	229
Microwave popcorn? How about digital movies?	230
Plugging multimedia stuff into the browser window	231
Embedding files in your document	231
A quick example: QuickTime movies	233
Working that thing called Java	233
Getting yourself some Java applets	234
Adding Java applets to your page	234

Working that thing called Java

see page 233

15 Scripting Your Page 237

Are Java and JavaScript the same?	238
So what's JavaScript?	238
What about other scripting languages?	239
Entering scripts in your Web documents	240
The SCRIPT tag	240
Hiding scripts in your documents	240

**JavaScript's
bold state-
ments**

see page 247

- Getting JavaScript to function 242
 - So what's a function? 243
 - Making your function-related intentions known 244
 - Get the function going with a call 245
 - So how do we get the answer from the function? 246
- JavaScript's bold statements 247
 - Conditions and their operators 248
 - AND, OR, NOT comparisons 249
 - if...else 250
 - Loop statements 250
 - FOR loops 250
 - WHILE loops 251
- Writing the first script 251
- Handling events from users 253
 - Returning values from functions 253
 - Events you might want to handle 256
- Checking data in forms and alerting users to errors 257
 - Writing the form checking function 257
 - Writing the form checking script 259
- For more information... 260

16 Designing for Netscape 3.0 and Internet Explorer 3.0 261

- Isn't HTML supposed to be a standard? 262
- The benefits and drawbacks of proprietary HTML designs 262
- What's up in Netscape 3? 265
 - Adding newspaper-style columns 265
 - Sometimes you just need your space 266
 - Netscape's own little text styles..... 267
 - Striking ou 267
 - Making Netscape text annoying 268
 - To break or not to break..... 268
 - Netscape plug-ins 269

**What's up
in Net-
scape 3?**

see page 265
