Dedication

This book is dedicated to Dr. John R. Paul, who introduced me to the field of epidemiology and to the concepts of clinical and serological epidemiology; to Dr. Thomas F. Francis, who arranged and supervised my Master of Public Health degree (in epidemiology) at the University of Michigan School of Public Health; to Dr. William D. Stovall, who taught me the potential contributions of the public health laboratory to epidemiology and to preventive medicine; to Dr. David Seegal and Dr. John R. Talbott, my mentors in clinical medicine; and to Dr. Ernst J. Witebsky, Dr. Paul F. Clark, and Dr. Victor C. Seastone, my teachers and associates in immunology and microbiology.

A. S. Evans

Contributors

ABRAM S. BENENSON, Department of Community Medicine, University of Kentucky College of Medicine, Lexington, Kentucky

FRANCIS L. BLACK, Department of Epidemiology and Public Health, Yale University School of Medicine, New Haven, Connecticut

CARL BRANDT, Laboratory of Infectious Diseases, National Institute of Allergy and Infectious Diseases, National Institutes of Health, Bethesda, Maryland; Children's Hospital National Medical Center of D. C., Washington, D.C.; and George Washington University School of Medicine, Department of Child Health and Development, Washington, D.C.

JACOB A. BRODY, National Institute of Neurological and Communicative Disorders and Stroke, National Institutes of Health, Bethesda, Maryland

JORDI CASALS, Department of Epidemiology and Public Health, Yale University School of Medicine, New Haven, Connecticut

ROBERT M. CHANOCK, Laboratory of Infectious Diseases, National Institute of Allergy and Infectious Diseases, National Institutes of Health, Bethesda, Maryland, and Children's Hospital of D.C., Washington, D.C.

FRED M. DAVENPORT, Department of Epidemiology, School of Public Health, University of Michigan, Ann Arbor, Michigan

FLOYD W. DENNY, Department of Pediatrics, School of Medicine, University of North Carolina, Chapel Hill, North Carolina

G. DE-THÉ, International Agency for Research on Cancer, Lyon, France

WILBUR G. DOWNS, Department of Epidemiology and Public Health, Yale Arbovirus Research Unit, Yale University School of Medicine, New Haven, Connecticut

ALFRED S. EVANS, WHO Serum Reference Bank, Section of International Epidemiology, Department of Epidemiology and Public Health, Yale University School of Medicine, New Haven, Connecticut

HARRY A. FELDMAN, Department of Preventive Medicine, State University of New York, Upstate Medical Center, Syracuse, New York

HJORDIS M. FOY, Department of Epidemiology and International Health,

School of Public Health and Community Medicine, University of Washington, Seattle, Washington

CLARENCE JOSEPH GIBBS, JR., Laboratory of Central Nervous System Studies, National Institute of Neurological and Communicative Disorders and Stroke, National Institutes of Health, Bethesda, Maryland

W. PAUL GLEZEN, Department of Pediatrics, School of Medicine, University of North Carolina, Chapel Hill, North Carolina

Contents

Chapter 1

Epidemiological Concepts and Methods

Alfred S. Evans

1. Introduction	1
2. Definitions and Methods	1
3. The Agent	5
4. The Environment	5
5. Routes of Transmission	6
5.1. Respiratory	6
5.2. Gastrointestinal	8
5.3. Skin	9
5.4. Genital	9
5.5. Genitourinary	9
5.6. Personal Contact	10
5.7. Water and Food	10
5.8. Arthropod Borne	10
6. Pathogenesis	10
6.1. Respiratory	10
6.2. Gastrointestinal	11
6.3. Systemic Infections	11
6.4. The Exanthem	11
6.5. Infections of the Central Nervous System	12
6.6. Persistent Viral Infections	12
7. Incubation Period	13
8. The Immune Response	14
8.1. Humoral Immunity	14
8.2. Local Immunity (Secretory IgA System)	15
8.3. Cell-Mediated Immunity	15
8.4. Immune Responses in the Pathogenesis of Viral Diseases	16
9. Patterns of Host Responses	16
9.1. The Biological Gradient	16
9.2. Clinical Syndromes	18

10. Diagnosis of Viral Diseases	22
10.1. Collection	22
10.2. Requests for Testing	23
10.3. Interpretation of Tests	24
11. Proof of Causation	24
12. Control and Prevention	28
13. References	28
14. Suggested Reading	32

Chapter 2**Surveillance and Seroepidemiology****Alfred S. Evans**

1. Introduction	33
2. Surveillance	33
2.1. Historical Background	33
2.2. Elements of Surveillance	34
2.3. Other Surveillance Methods	37
2.4. Surveillance in Research Studies	38
2.5. Publications on Surveillance	39
2.6. Predictive Surveillance	39
3. Seroepidemiology	40
3.1. Introduction	40
3.2. Historical Background	40
3.3. Methodology	41
3.4. Advantages and Limitations	42
3.5. Uses of Seroepidemiology	42
4. References	49

Chapter 3**Adenoviruses****Hjordis M. Foy and J. Thomas Grayston**

1. Introduction	53
2. Historical Background	53
3. Methodology Involved in Epidemiological Analysis	54
3.1. Sources of Data	54
3.2. Interpretation of Laboratory Tests	55
4. Characteristics of the Virus	55
5. Descriptive Epidemiology	56
5.1. Synopsis of Descriptive Epidemiology	56
5.2. Epidemiological and Clinical Aspects of Specific Syndromes	56
6. Mechanisms and Route of Transmission	62
7. Pathogenesis and Immunity	63
8. Pattern of Host Response	63
9. Control and Prevention	64

10. Unresolved Problems	65
11. References	65
12. Suggested Reading	69

Chapter 4

Arboviruses**Wilbur G. Downs**

1. Introduction	71
2. Historical Background	71
3. Methodology Involved in Epidemiological Analysis	74
3.1. Sources of Mortality Data	74
3.2. Sources of Morbidity Data	75
3.3. Serological Surveys	75
3.4. Laboratory Methods	76
4. Biological Characteristics of Virus Affecting the Epidemiological Pattern	76
5. Epidemiology	77
5.1. Incidence and Prevalence	78
5.2. Epidemic Behavior	78
5.3. Geographic Distribution	79
5.4. Temporal Distribution	79
5.5. Age and Sex	79
5.6. Other Factors	79
6. Mechanism and Route of Transmission	80
7. Pathogenesis and Immunity	81
8. Patterns of Host Response	85
8.1. Clinical Features	85
8.2. Diagnosis	85
9. Control and Prevention	86
10. Characteristics of Selected Arboviruses	87
10.1. Arboviruses of Importance in the United States	87
10.2. Other Arboviruses Affecting Human Beings in the United States	91
10.3. Arboviruses Affecting Human Beings Outside the United States	92
11. Unresolved Problems	95
11.1. The Viruses	95
11.2. The Vectors	96
11.3. The Vertebrate Hosts	96
11.4. Transmission Cycles Involving Virus, Vector, and Vertebrate	96
11.5. Disease in the Vertebrate Host	97
11.6. Control	97
12. References	98
13. Suggested Reading	100

Chapter 5

Arenaviruses

Jordi Casals

1. Introduction	103
2. Historical Background	103
3. Methodology	103
3.1. Mortality	103
3.2. Morbidity	104
3.3. Serological Surveys	104
3.4. Laboratory Diagnosis	104
4. The Viruses	105
4.1. Biochemical and Physical Properties	105
4.2. Morphology and Morphogenesis	105
4.3. Antigenic Properties	106
4.4. Biological Properties	107
5. Pathogenesis and Immunity	108
6. Lymphocytic Choriomeningitis	109
6.1. Descriptive Epidemiology	109
6.2. Mechanism and Route of Transmission	110
6.3. Patterns of Host Response	112
6.4. Treatment and Prevention	112
7. Argentinian Hemorrhagic Fever	112
7.1. Descriptive Epidemiology	113
7.2. Mechanism and Route of Transmission	113
7.3. Patterns of Host Response	113
7.4. Treatment, Control, and Prevention	115
8. Bolivian Hemorrhagic Fever	115
8.1. Descriptive Epidemiology	115
8.2. Mechanism and Route of Transmission	115
8.3. Patterns of Host Response	116
8.4. Treatment, Prevention, and Control	117
9. Lassa Fever	117
9.1. Descriptive Epidemiology	117
9.2. Mechanism and Route of Transmission	118
9.3. Patterns of Host Response	118
9.4. Treatment and Disposition of Patients	119
9.5. Prevention and Control	119
10. Unresolved Questions	119
10.1. Vaccines	119
10.2. Early Diagnosis of Lassa Fever and Evacuation of Patients	120
10.3. Hemorrhagic Fever with Renal Syndrome	120
11. References	121
12. Suggested Reading	124

Chapter 6

Coronaviruses**Arnold S. Monto**

1. Introduction	127
2. Historical Background	127
3. Methodology	128
3.1. Sources of Mortality Data	128
3.2. Sources of Morbidity Data	128
3.3. Serological Surveys	129
3.4. Laboratory Methods	129
4. Biological Characteristics of the Virus	130
5. Descriptive Epidemiology	132
5.1. Incidence and Prevalence	132
5.2. Geographic Distribution	135
5.3. Temporal Distribution	135
5.4. Age	136
5.5. Other Factors	137
6. Mechanisms and Routes of Transmission	137
7. Pathogenesis and Immunity	138
8. Patterns of Host Response	138
9. References	139
10. Suggested Reading	141

Chapter 7

Cytomegalovirus**Eli Gold and George A. Nankervis**

1. Introduction	143
2. Historical Background	143
3. Methodology	144
3.1. Mortality	144
3.2. Morbidity	144
3.3. Serological Surveys	144
3.4. Laboratory Diagnosis	144
4. Biological Characteristics of the Virus	145
5. Descriptive Epidemiology	146
5.1. Prevalence and Incidence	146
5.2. Geographic Distribution	149
5.3. Age and Sex	149
5.4. Temporal Distribution	150
5.5. Occupation	150
5.6. Race/Socioeconomic Setting	150
6. Mechanism of Transmission	150
7. Pathogenesis and Immunity	150
7.1. Pathogenesis	151

7.2. Immunity	152
8. Patterns of Host Response	152
8.1. Neonatal Infections	152
8.2. Infection of Children and Adults	153
9. Immunization	156
10. Unresolved Problems	156
11. References	156
12. Suggested Reading	161

Chapter 8

Enteroviruses

Joseph L. Melnick

1. Introduction	163
2. Historical Background	164
3. Methodology Involved in Epidemiological Analysis	165
3.1. Sources of Mortality Data	165
3.2. Sources of Morbidity Data	165
3.3. Serological Surveys	166
3.4. Virus Isolation from Surface Waters as an Indicator of Community Infections	167
3.5. Laboratory Methods	168
4. Biological Characteristics of Virus Affecting the Epidemiological Pattern	171
4.1. General Properties	171
4.2. Reactions to Chemical and Physical Agents	171
4.3. Antigenic Characteristics	172
4.4. Host Range <i>in Vivo</i> and <i>in Vitro</i>	173
4.5. Replication of Enteroviruses	174
5. Descriptive Epidemiology	176
5.1. General Epidemiology of Enteroviruses	176
5.2. Epidemiological Patterns of Poliomyelitis	183
6. Mechanisms and Route of Transmission	186
7. Pathogenesis and Immunity	187
7.1. Pathogenesis	187
7.2. Immunity	188
8. Patterns of Host Response and Diagnosis	189
8.1. Clinical Syndromes	189
8.2. Diagnosis	192
9. Control and Prevention	195
9.1. Schedules of Oral Vaccine Administration	195
9.2. Problems Associated with Oral Polio Vaccine	196

9.3. Current Status of Immunization for Poliomyelitis in the United States	197
9.4. "Social Failures" of Vaccine Administration	198
9.5. Nonspecific Control Measures	200
9.6. Control of Other Enterovirus Infections	201
10. Unresolved Problems	201
11. References	201

Chapter 9

Epstein-Barr Virus

Alfred S. Evans and James C. Niederman

1. Introduction	209
2. History	209
3. Methodology	210
3.1. Mortality Data	210
3.2. Morbidity Data	211
3.3. Serological Surveys	211
3.4. Laboratory Methods	212
4. Biological Characteristics of the Agent	213
4.1. The Virus	213
4.2. Proof of Causation of Infectious Mononucleosis	214
5. Descriptive Epidemiology	215
5.1. Prevalence and Incidence	215
5.2. Epidemic Behavior	217
5.3. Geographic Distribution	218
5.4. Temporal Distribution	218
5.5. Age	219
5.6. Sex	219
5.7. Race	220
5.8. Occupation	220
5.9. Occurrence in Different Settings	220
5.10. Socioeconomic Factors	221
5.11. Other Factors	221
6. Mechanism and Route of Transmission	221
7. Pathogenesis and Immunity	222
8. Patterns of Host Response	224
8.1. Clinical Features	224
8.2. Diagnosis	225
9. Control and Prevention	226
10. Unsolved Problems	227
11. References	228
12. Suggested Reading	233

Chapter 10

Viral Hepatitis

Robert W. McCollum

1. Introduction	235
2. Historical Background	235
3. Methodology Involved in Epidemiological Analysis	236
3.1. Mortality	236
3.2. Morbidity	236
3.3. Serological Surveys	237
3.4. Laboratory Methods	238
4. Biological Characteristics of the Human Hepatitis Viruses	239
5. Descriptive Epidemiology	240
5.1. Viral Hepatitis Type A	240
5.2. Viral Hepatitis Type B	241
6. Mechanisms and Routes of Transmission	242
6.1. Viral Hepatitis Type A	242
6.2. Viral Hepatitis Type B	243
7. Pathogenesis and Immunity	245
7.1. Viral Hepatitis Type A	245
7.2. Viral Hepatitis Type B	245
8. Patterns of Host Response	246
8.1. Clinical Features	246
8.2. Laboratory Diagnosis	246
9. Control and Prevention	246
9.1. Type A	247
9.2. Type B	247
10. Unresolved Problems	248
11. References	249

Chapter 11

**Epidemiology of Herpes Simplex Viruses
1 and 2**

André J. Nahmias and William E. Josey

1. Introduction and Social Significance	253
2. Evolutionary and Historical Background	254
3. Methodology Involved in Epidemiological Analysis	254
3.1. Mortality	254
3.2. Morbidity	255
3.3. Serological Surveys	255
3.4. Laboratory Diagnosis	256
4. Biological Characteristics of HSV-1 and HSV-2	257
5. Descriptive Epidemiology	258
5.1. General Epidemiology	258

5.2. Epidemiological Aspects of Specific Clinical Entities	260
6. Mechanisms and Routes of Transmission	262
7. Pathogenesis and Immunity	263
8. Patterns of Host Response	265
8.1. Mouth and Respiratory and Gastrointestinal Tracts	265
8.2. Lips	265
8.3. Eyes	266
8.4. Skin	266
8.5. Urogenital Tract	266
8.6. Nervous System	266
8.7. Fetus and Newborn	266
9. Control and Prevention	267
9.1. Prevention of the Initial Infection	267
9.2. Reducing the Source of Virus Transmissible to Others	268
10. Unresolved Problems	268
10.1. Reporting	268
10.2. Virological Aspects	268
10.3. Host Factors	268
10.4. Control and Prevention	268
11. References	269
12. Suggested Reading	271

Chapter 12**Influenza Viruses****Fred M. Davenport**

1. Introduction	273
2. Historical Background	274
3. Epidemiological Methodology	275
3.1. Mortality Data	275
3.2. Morbidity Data	276
3.3. Serological Surveys	277
3.4. Laboratory Methods	277
4. Biological Characteristics of the Virus	278
5. Descriptive Epidemiology	278
5.1. Incidence and Prevalence Date	278
5.2. Epidemic Behavior	284
5.3. Geographic Distribution	284
5.4. Temporal Distribution	284
5.5. Age	284
5.6. Other Factors	286
6. Transmission	287
7. Pathogenesis and Immunity	287
7.1. Pathogenesis	287

7.2. Immunity	288
8. Patterns of Host Response	289
8.1. Clinical Features	289
8.2. Diagnosis	289
9. Control Measures	290
10. Unresolved Problems	291
11. References	291
12. Suggested Reading	296

Chapter 13

Measles

Francis L. Black

1. Introduction	297
2. Historical Background	297
3. Methodology Involved in Epidemiological Analysis	298
3.1. Sources of Mortality Data	298
3.2. Sources of Morbidity Data	298
3.3. Serological Surveys	299
3.4. Laboratory Methods	300
4. Biological Characteristics of the Virus	300
5. Descriptive Epidemiology	300
5.1. Incidence	300
5.2. Epidemic Behavior	301
5.3. Geographic Distribution	303
5.4. Temporal Distribution	304
5.5. Age	304
5.6. Sex	305
5.7. Race	305
5.8. Occupation	306
5.9. Social Setting	306
5.10. Socioeconomic Factors	307
5.11. Nutrition	307
6. Transmission	307
7. Pathogenesis and Immunity	308
8. Patterns of Host Response	310
8.1. Clinical Features of Unusual Forms	310
8.2. Diagnosis	311
9. Control and Prevention	311
10. Unresolved Problems	312
10.1. Vaccine Distribution	312
10.2. Unusual Reactions Following Killed Vaccine	313
10.3. Measles and Multiple Sclerosis	313
11. References	313
