Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they havea professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

LIST OF CONTRIBUTORS

Chris Aldrich
Department of Mining Engineering and Metallurgical Engineering, Western Australian School of Mines, Curtin University of Technology, Perth, WA, Australia

John Bratby
Brown and Caldwell, Golden, CO, USA

Luzheng Chen
State Key Laboratory of Complex Nonferrous Metal Resources Clean Utilization, Kunming University of Science and Technology, Kunming, Yunnan, China

Morgane Citeau
CREOL, Pessac, France

Claudia Cobzaru
Technical University "Gh Asachi" Isai, Faculty of Chemical Engineering and Environmental Protection, Romania

Bart Van der Bruggen
Department of Chemical Engineering, Laboratory of Applied Physical Chemistry and Environmental Technology, KU Leuven, Leuven, Belgium

Luhui Ding
Technological University of Compiegne, Compiegne Cedex, France

Gjergj Dodbiba
Department of Systems Innovation, The University of Tokyo, Tokyo, Japan

John Dodds
Professeur honoraire, Ecole des Mines d'Albi, France

B. Ekberg
Outotec Oyj, Finland, Turku, Finland

Mohamed Essalhi
Department of Applied Physics I, Faculty of Physics, University Complutense of Madrid, Madrid, Spain

Toyohisa Fujita
Department of Systems Innovation, The University of Tokyo, Tokyo, Japan

Aloke Kumar Ghoshal
Department of Chemical Engineering, Indian Institute of Technology Guwahati, Guwahati, India

N.F. Gray
Water Technology Research Group, Trinity Centre for the Environment, Trinity College, University of Dublin, Dublin, Ireland

此为试读,需要完整PDF请访问: www.ertongbook.com

Thomas Harlacher
Aachener Verfahrenstechnik, Chemical Process Engineering, RWTH Aachen University, Aachen, Germany

Steffen Heidenreich
Pall Filtersystems GmbH, Werk Schumacher Crailsheim, Crailsheim, Germany

Vassilis Inglezakis
Chemical Engineer (MSc, PhD) Environmental Consulting & Project Management Romania

Michel Y. Jaffrin
Technological University of Compiegne, Compiegne Cedex, France

Mohamed Khayet
Department of Applied Physics I, Faculty of Physics, University Complutense of Madrid, Madrid, Spain; Madrid Institute for Advanced Studies of Water (IMDEA Water Institute), Alcalá de Henares, Madrid, Spain

Olivier Larue
Solvay, Center for Research & Technology of Shanghai, Xin Zhuang Industrial Zone, Shanghai, China

Patricia Luis
Department of Chemical Engineering, Laboratory of Applied Physical Chemistry and Environmental Technology, KU Leuven, Leuven, Belgium

Jianquan Luo
Technological University of Compiegne, Compiegne Cedex, France

Pentti Pirkonen
Technical Research Centre of Finland (VTT), Jyväskylä, Finland

Majid Naderi
Surface Measurement Systems, Ltd., Alperton, London, UK

Marie-Noëlle Pons
Laboratoire Réactions et Génie des Procédés, Université de Lorraine, Nancy cedex, France

Prabirkumar Saha
Department of Chemical Engineering, Indian Institute of Technology Guwahati, Guwahati, India

Yoshinobu Tanaka
IEM Research, Ushiku-Shi, Ibaraki, Japan

Eugene Vorobiev
Département de Génie des Procédés Industriels, Laboratoire Transformations Intégrées de la Matière Renouvelable, Université de Technologie de Compiègne, Centre de Recherches de Royallieu, Compiègne, France

Matthias Wessling
Aachener Verfahrenstechnik, Chemical Process Engineering, RWTH Aachen University, Aachen, Germany

Dahe Xiong
SLon Magnetic Separator Co., Ltd., Ganzhou, Jiangxi, China

CONTENTS

List of Contributors xv

1. Hydrocyclones **1**
Chris Aldrich

Nomenclature 2
1. Background 3
2. Basic Design 5
   2.1. Geometry 5
   2.2. Inlet Design 5
   2.3. Materials of Construction 6
3. Characterization of Performance 7
   3.1. Partition Curves 7
   3.2. Factors Affecting the Performance of Hydrocyclones 8
4. Hydrocyclone Models 9
   4.1. Fundamental and Empirical Models 9
   4.2. Numerical Models 12
5. Scale-up and Design 15
   5.1. Scale-up 15
   5.2. Hydrocyclone Networks 16
6. Monitoring and Control of Hydrocyclones 16
   6.1. Control 16
   6.2. Soft Sensors 16
   6.3. Online Monitoring of Hydrocyclones 17
   6.4. Example of Underflow Monitoring 17
7. Future Developments 19
References 20

Section 1 Membrane filters

2. Dynamic Filtration with Rotating Disks, and Rotating or Vibrating Membranes **27**
Luhui Ding, Michel Y. Jaffrin and Jianquan Luo

1. Introduction 28
   1.1. Differences between Dynamic and Crossflow Filtration 29
   1.2. Advantages and Limitations of Dynamic and Crossflow Filtrations 29
2. Review of Industrial Dynamic Filtration Modules 31

2.1. VSEP Vibrating Systems 31
2.2. Multicompartments Systems with Rotating Disks or Rotors between Fixed Membranes 32
2.3. Rotating Membrane Systems 33
2.4. Other Developing Dynamic Filtration Modules 36
3. Calculations of Internal Fluid Dynamics in Various Dynamic Filtration Modules 40
3.1. Membrane Shear Rate and Pressure Distribution in Rotating Disk Modules with Fixed Membranes 40
3.2. Membrane Shear Rate in Vibrating Systems 41
4. Recent Applications of Dynamic Filtration and Industrial Case Studies 42
4.1. VSEP Applications 42
4.2. Applications of Rotating Disks and Rotating Membranes Modules 47
5. Discussion 54
5.1. Energetic Considerations 54
5.2. Complementarity of Crossflow and Dynamic Filtrations 55
6. Conclusions 56
References 56

3. Membrane Distillation (MD) 61

Mohamed Essalhi and Mohamed Khayet

1. Membrane Distillation Separation Technology and Its Variants 62
2. MD Modules and Fluid Flow 71
3. MD Applications: Filtration and Separation 83
4. Tips, Remarks, and Future Directions in MD 91
Acknowledgments 92
References 92

4. Pervaporation 101

Bart Van der Bruggen and Patricia Luis

1. Introduction 101
2. Fundamentals of Pervaporation 106
3. Pervaporation Membranes 115
4. Hydrophilic Pervaporation: Applications in Dehydration 121
5. Hydrophobic Pervaporation 127
6. Organophilic Pervaporation 129
7. Hybrid Systems 130
8. Ethanol Purification and Production of Bio-Ethanol 135
9. Pervaporation Membrane Reactors 139
10. Conclusions 143
References 144

5. Liquid – Membrane Filters **155**

Aloke Kumar Ghoshal and Prabirkumar Saha

1. Introduction 156
2. Theoretical Background of Solute Transport through LM 157
3. Mechanism of Transport of Solute in LM-Based Separation 159
   - 3.1. Passive Transport 159
   - 3.2. Active Transport 161
4. Types of Transport of Solute in LM-Based Separation 162
   - 4.1. Cation Transport 162
   - 4.2. Anion Transport 164
   - 4.3. Neutral Transport 165
   - 4.4. Switchable Transport 166
5. Carrier 166
   - 5.1. Advantages of Carriers 167
   - 5.2. Types of Carrier 167
   - 5.3. Choice of Carrier 168
6. Solvents 170
   - 6.1. Choice of Solvents 170
   - 6.2. Types of Solvents 171
7. Types of LM 171
   - 7.1. Bulk Liquid Membrane 172
   - 7.2. Emulsion Liquid Membrane 173
   - 7.3. Supported Liquid Membrane 175
   - 7.4. Electrostatic Pseudo Liquid Membrane 178
   - 7.5. Hollow Fibre Renewal Liquid Membrane 179
8. Operational Issues Related to LM-Based Separation Unit 181
   - 8.1. Two Phase Study 181
   - 8.2. Three Phase Study 182
9. Case Study 183
   - 9.1. Organic Pollutant 184
   - 9.2. Heavy Metals 193
   - 9.3. Bioactive Compounds 197

References 202

6. Electrodialysis **207**

Yoshinobu Tanaka

1. Introduction 208
2. Electrodialyzer 210
   - 2.1. Structure of an Electrodialyzer and Process Operations 211

2.2. Parts of an Electrodialyzer 213
2.3. Requirements for Improving the Performance of an Electrodialyzer 216
3. Continuous (SINGLE-PASS) Electrodialysis Program 218
3.1. Overview 218
3.2. Continuous Electrodialysis Process 219
3.3. Mass Transport in an Electrodialyzer 221
3.4. Overall Mass Transport Equation and Membrane Characteristics 222
3.5. Salt Concentration and Linear Velocity in Desalting Cells 223
3.6. Salt Concentration and Linear Velocity in Concentrating Cells 225
3.7. Physical Properties of Solutions in Desalting and Concentrating Cells 226
3.8. Electric Resistance of an Ion-Exchange Membrane Pair and Solutions in Desalting and Concentrating Cells 227
3.9. Pressure Drop in Desalting and Concentrating Cells 228
3.10. Current Density Distribution 229
3.11. Cell Voltage, Energy Consumption, Water Recovery, Desalting Ratio 233
3.12. Limiting Current Density 234
3.13. Electrodialysis Program 236
3.14. Saline Water Desalination 236
3.15. Drinking Water Production in the Two-Stage Operation 244
4. Batch Electrodialysis Program 248
4.1. Overview 248
4.2. Batch Electrodialysis Process 249
4.3. Performance of an Electrodialyzer 250
4.4. Performance of the Batch Process 254
4.5. Saline Water Desalination 257
4.6. Drinking Water Production 258
4.7. Limiting Current Density 264
5. Feed-and-Bleed Electrodialysis Program 266
5.1. Overview 266
5.2. Feed-and-Bleed Process 267
5.3. Mass Balance and Energy Consumption in the Feed-and-Bleed Operation 268
5.4. Electrodialysis Program of the Feed-and-Bleed Operation 269
5.5. Specifications and Operating Conditions of the Electrodialyzer 271
5.6. Drinking Water Production 271
References 282

Section 2 Force field assisted separators

7. Magnetic Techniques for Mineral Processing **287**

Luzheng Chen and Dahe Xiong

1. Introduction to Magnetic Separation 287
2. Magnetic Separation Techniques 291
   - 2.1. Low-Intensity 291
   - 2.2. High-Intensity 297
   - 2.3. High-Gradient 300
3. Case Studies on Magnetic Separations 316
   - 3.1. Magnetite and Hematite Ores 317
   - 3.2. Limonite Ore 319
   - 3.3. Ilmenite Ore 320
   - 3.4. Nonmetallic Ores 321
4. Future Trends in Magnetic Separation 321
5. Conclusions 323

References 323

List of Relevant Web Sites 324

8. Electric (Electro/Dielectro-Phoretic)—Force Field Assisted Separators **325**

Morgane Citeau, Olivier Larue and Eugene Vorobiev

Nomenclature 326

1. Introduction 328
2. Electrophoretic and Electroosmotic Treatments 329
   - 2.1. Electric Field-Induced Effects 329
   - 2.2. Dead end Electrofiltration and Electroosmotic Treatment 332
   - 2.3. Crossflow Electrofiltration 357
3. Dielectrophoretic Treatment 363
   - 3.1. Nonuniform Electric Field-Induced Effects 363
   - 3.2. Mechanisms 368
   - 3.3. Equipments 373
   - 3.4. Typical Ancillaries and Fitment within a Flowsheet for Industrial Dielectrophoretic Filter 381
   - 3.5. Factors Affecting the Treatment 381
   - 3.6. Typical Uses and Applications 381
4. Comparison of Electrically Assisted Separation Processes 387
5. Conclusions 390

References 391

9. Ultrasonic **399**

Pentti Pirkonen and B. Ekberg

1. Introduction 399
2. Origin of Ultrasonically Induced Effects 400
3. Standing Wave Separation 403
4. Ultrasound Assisted Sieving 405
5. Polishing Filtration 407
6. Sludge Dewatering 411
   - 6.1. Sludge Pretreatment 411
   - 6.2. Cake Filtration 412
7. Membrane Filtration 415

References 418

List of Relevant Web Sites 421

Section 3 Membranes

10. Ion Exchange **425**

Claudia Cobzaru and Vassilis Inglezakis

1. Ion Exchange Process 425
   - 1.1. General 425
   - 1.2. Kinetics of Ion Exchange 434
   - 1.3. Thermodynamics of Ion Exchange 445
   - 1.4. Processes: Fixed and Fluidized Bed Systems—Basic Principles and Application in Ion Exchange 447
2. Ion Exchange Materials 472
   - 2.1. Inorganic Ion Exchangers 472
   - 2.2. Organic Ion Exchangers 476
3. Industrial Applications of Ion Exchange Processes 478
   - 3.1. Environmental Processes 478
   - 3.2. Production Processes 485

References 487

11. Hot Gas Filters **499**

Steffen Heidenreich

1. Introduction 499
2. Hot Gas Filtration—Advantages/Disadvantages 501
   - 2.1. Advantages 501
   - 2.2. Disadvantages 502
3. Filter Media for Hot Gas Filtration 502

3.1. Ceramic Media 504
3.2. Metal Media 506
3.3. Catalytically Active Filter Media 507
4. Surface Filtration and Hot Gas Filter Element Cleaning 509
4.1. Conventional Jet Pulse Cleaning 509
4.2. Pall Schumacher Venturi Ejector Jet Pulse System 511
4.3. Coupled Pressure Pulse Cleaning 512
4.4. Pulse-less Crossflow Filtration Concepts 515
5. Hot Gas Filter Design 517
5.1. Filter Element Arrangements 517
5.2. Flow Distribution 519
5.3. Special Filter Design 519
6. Applications 521
7. Conclusions 523
References 523

12. Air Tabling—A Dry Gravity Solid–Solid Separation Technique 527
Gjergj Dodbiba and Toyohisa Fujita

Nomenclature 528
Greek Letters 529
Superscripts 530
1. Introduction 530
2. Applications of Air Tabling 531
3. Apparatus 532
4. Principles of Air Tabling 534
5. Case Study: Air Tabling of PVC/PP Mixture 541
5.1. Variation in Superficial Air Velocity 542
5.2. Variation in Longitudinal Vibrating Frequency of the Deck 544
5.3. Variation in Slope of the Deck (End Slope and Side Slope) 546
5.4. Variation in Height of Riffles 550
5.5. Variation in Feed Flow Rate 551
6. Performance Curve of Air Tabling 553
References 555

13. Gas–Gas Separation by Membranes 557
Thomas Harlacher and Matthias Wessling

Nomenclature 558
Indices 558
1. Introduction 559

2. Membrane Modules for Gas Separation 560
2.1. Module Construction 560
2.2. Membrane Material 563
2.3. Mass Transfer through Polymer Membranes 564
2.4. Concepts of Flow Control 567
3. Process Design 568
3.1. Pressure Ratio and Stage Cut 568
3.2. Driving Force Generation 569
3.3. Feed Pretreatment 570
3.4. Module Interconnection 571
3.5. Economic Parameters for Process Design 573
4. Applications of Gas Permeation Processes 574
4.1. Oxygen/Nitrogen Separation 574
4.2. Biogas Treatment 580
References 584

14. Surface Area: Brunauer–Emmett–Teller (BET) 585

Majid Naderi

1. Introduction 585
2. Gas–Solid Interface 586
2.1. Gas–Solid Interfacial Thermodynamic 586
3. Surface Adsorption Phenomena 587
3.1. Adsorption Isotherms 587
4. BET Surface Area Measurements 590
4.1. BET Equation 591
4.2. Multipoint Measurement 592
4.3. Single Point Measurement 592
5. Sample Preparation 592
6. Volumetric Gas Adsorption Technique 594
6.1. Adsorbates 594
6.2. Advantages and Limitations 595
7. Gravimetric Dynamic Vapour Sorption Technique 596
7.1. Principle 597
7.2. Sample Preparation and Experimental Procedures 598
7.3. Advantages and Limitations 601
8. Chromatographic Adsorption Technique 601
8.1. Principle 602
8.2. Sample Preparation and Experimental Procedures 604
8.3. Advantages and Limitations 607
9. Summary 607
References 607

15. Particle Shape Characterization by Image Analysis **609**
Marie-Noëlle Pons and John Dodds

Nomenclature 609
1. Introduction 610
2. Image Acquisition 611
3. Image Treatment 614
4. Basic Size Descriptors 616
5. Shape Descriptors 618
6. Twinned Crystals and Agglomerates 620
7. Fractal-like Particles 621
8. Biological Particles 624
9. Case of In situ Images 626
10. Selection of Magnification 628
11. Distributions 629
12. 3D Shape 632
13. Conclusions 633
References 634

16. Turbidity: Measurement of Filtrate and Supernatant Quality? **637**
John Bratby

1. Importance of Particulates in Process and Municipal Waters 637
2. Advantages of Turbidity Measurements 639
3. Turbidity as Surrogate for Particle Concentrations 643
4. Principles of Turbidity Measurement 645
5. Turbidity Instruments 647
6. Instrument Calibration 652
7. Techniques for Accurate Turbidity Measurements 654
References 656

17. Capillary Suction Time (CST) **659**
N.F. Gray

1. Introduction 659
2. Methods 660
3. Factors Affecting CST Measurements 664
4. Examples of CST use 666
5. Conclusions 668
References 668

CHAPTER ONE

Hydrocyclones

Chris Aldrich
Department of Mining Engineering and Metallurgical Engineering, Western Australian School of Mines, Curtin University of Technology, Perth, WA, Australia

Contents

Nomenclature 2
1. Background 3
2. Basic Design 5
   2.1 Geometry 5
   2.2 Inlet Design 5
   2.3 Materials of Construction 6
3. Characterization of Performance 7
   3.1 Partition Curves 7
   3.2 Factors Affecting the Performance of Hydrocyclones 8
4. Hydrocyclone Models 9
   4.1 Fundamental and Empirical Models 9
      4.1.1 Equilibrium Orbit Theory 10
      4.1.2 Crowding Theory 10
      4.1.3 Residence Time Theory 10
      4.1.4 Turbulent Two-Phase Flow 11
      4.1.5 Empirical Modelling 11
   4.2 Numerical Models 12
      4.2.1 Modelling Turbulence 12
      4.2.2 Model Validation 13
5. *Scale-up and Design* 15
   5.1 Scale-up 15
   5.2 Hydrocyclone Networks 16
6. Monitoring and Control of Hydrocyclones 16
   6.1 Control 16
   6.2 Soft Sensors 16
   6.3 Online Monitoring of Hydrocyclones 17
   6.4 Example of Underflow Monitoring 17
7. Future Developments 19
