Chapter 3 introduces regression measure. Sample size (p.3-1) and inter-distributional links between sample deviation (p.3-1), variance and standard deviation (p.3-2). This is followed by a discussion on the relationship between two distributions (p.3-3). The chapter ends with a section on joint distributions (p.3-11).

Preface

This is an intermediate level textbook on statistics with emphasis on theory and algorithms. It integrates the multitude of algorithms available for common data analysis tasks. Numerical examples illustrate most of the algorithms. Pseudo code for the algorithms is given to benefit the students and researchers.

This book can be used for senior undergraduate or graduate level courses in statistical computing, statistical algorithms, computational methods in statistics, computer intensive methods, and engineering statistics. Some of the chapters can also be used for courses on mathematical statistics (ch.1-4,6-10,12), advanced statistical methods (ch.1, 5-12), actuarial statistics (ch.2-4,6,7), biostatistics, economics (ch.2-4,8), information technology (ch.1-5,12), numerical methods (ch.1,5,12), industrial statistics (ch.2-5,8-10,12), econometrics (ch.1-7,9-11), management(ch.2-4, 8-10), medical statistics, commerce (ch.2-4,6) and computer science (ch.1-5,8,11,12). This is also an ideal book for researchers in various fields. The study of statistical algorithms is also important for scientists and professionals. A brief overview of the chapters is given below.

A general discussion of algorithms appears in Chapter 1. Complexity of algorithms is clearly discussed and types of complexities are described. Complexity notations are briefly reviewed in §1.2 (1-3). A recursive algorithm for sample mean appears in page 1-3. A summary table of complexity of algorithms can be found in page 1-5. Algorithm design techniques are discussed next. Several examples of recursive and iterative algorithms are given. Efficiency of algorithms is discussed in §1.4(p.1-14), followed by data dependency on algorithms. Algorithms for minimum and maximum (§1.5), powers, combinations, k^{th} smallest or largest element in an unsorted list (§1.7) are discussed.

Chapter 2 introduces popular measures of central tendency. Topics covered include arithmetic, geometric, harmonic and quadratic means, median and mode. Means for frequency data and weighted means are also discussed. Several novel algorithms to update these measures when data arrive afresh are given (p.2-5). Algorithms for trimmed-mean (page 2-7), sample median (page 2-12), mode (page 2-14) etc are discussed.

Chapter 3 introduces dispersion measures. Sample range (p.3-1), inter-quartile range, average absolute deviation (p.3-4), variance and standard deviation (p.3-5), etc are discussed. This is followed by a discussion of outliers and their detection (p.3-9). The chapter ends with a section on data transformations (p.3-11).

The chapter 4 discusses various measures of skewness and kurtosis. Absolute and relative measures are discussed in p.4-2. Popular skewness measures like Pearson's measure(p.4-3), Galton's measure (p.4-4), Kelly's measure and Bowley's measure (p.4-5) are introduced, and a new measure is proposed (p.4-5). This is followed by a discussion of kurtosis measures (p.4-8). The chapter ends with a review of L-kurtosis (p.4-10).

Chapter 5 is on matrix algorithms. Several statistical procedures like multiple regression, principal component analysis etc use matrix algorithms. This chapter starts with a general discussion of matrices. These are grouped under various categories for ease of comprehension. Quadratic forms are briefly introduced in section §5.5. Some of the popular matrix algorithms are introduced and illustrated with numerical examples. These include matrix inverse (p.5-10), matrix decompositions (p.5-15), eigen values (p.5-20), iterative matrix algorithms (p.5-28), etc. Linear equation algorithms are illustrated in §5.9.

Chapter 6 on Simple Linear Regression (SLR) gives algorithms for fitting linear regression model. Some variants of SLR are also discussed. Multiple Linear Regression (MLR) is described in §6.3. Multi-collinearity and its detection techniques are introduced in §6.4 and §6.5. This is followed by outlier detection (§6.6), variable selection methods (§6.7), and partial least squares (§6.8).

Chapter 7 gives a thorough discussion of measures of association. Sample covariance and correlation are introduced in §7.2 and §7.3. This is followed by other types of correlation like rank-correlation, Spearman's ρ , Kendall's τ , point biserial correlation, and ϕ -coefficient.

Chapter 8 is on distance-based methods. These include clustering, nearest neighbor algorithms, etc. Distance metrics that are extensively used in nearest neighbor algorithms, clustering algorithms, etc are discussed in the first few sections (p. 8-3 to 8-6). This is followed by similarity metrics. Popular clustering algorithms are discussed next. The chapter ends with a discussion of Nearest Neighbour Algorithms (NNA).

Chapter 9 discusses important discrete distributions. Some simple algorithms for the most popular distributions like Bernoulli, binomial, Poisson, geometric, hypergeometric, negative binomial and discrete uniform distributions are discussed in this chapter. Important properties are briefly summarised, and used in chapter 12 on random numbers.

The tenth chapter is on continuous univariate distributions. It discusses exponential, normal, gamma, beta, Cauchy, chi-square, t and F

distributions. A new family of distributions is introduced in §10.4 (p.10-4). Other distributions like skew-normal, log-normal, inverse Gaussian and arc-sin are briefly mentioned. Their properties and tail areas are summarised and used in chapter 12.

Chapter 11 is on EM Algorithm (EMA). This is a popular alternative to estimate parameters of a statistical population in the presence of missing data. A discussion on convexity of functions can be found in the beginning of this chapter. This is not needed from a practitioners view point, but is used in the derivation of the EM algorithm. The EMA is derived in page 11-8. Several examples of its use appear next. Variants of EM algorithms are also briefly reviewed.

The last chapter is on generating random numbers for simulation studies. Topics covered include random shuffling, congruential generators (linear and additive), functional composition method, etc. Generating random numbers for most of the important discrete and continuous distributions are discussed, and pseudocode for some of the algorithms are given. The last section discusses correlated random numbers. Chapters 9, 10 and 12 can be used for a course on simulation.

Chapter 2, 3, 7, 9 and 10 can be used for undergraduate courses in statistics, mathematics, econometrics, and business management. Other chapters may be used as ‘supplementary reading’ for various courses mentioned above. Professionals and practitioners in various fields can also use the book for self-study.

A large number of useful code-snippets and pseudo-code of algorithms appear throughout the book¹. Educational use of this code is permitted, provided that it is duly acknowledged. Every software that uses the code in this book must document it as “Source: RAJAN CHATTAMVELLI (STATISTICAL ALGORITHMS)” without fail. Please contact the author at the following email for commercial use, or for porting to specific languages. Any misuse must be reported to the author. The author or publisher is not liable for any damage, loss, malfunction or hazard resulting from the use of the code.

A carefully selected set of exercises has been provided to benefit the students and self-study professionals. Answers and hints are provided for selected exercises. Any suggestions and comments for improvement are welcome. All suggestions should be sent to dmmbook@gmail.com. Up-to-date errata will be made available upon request.

Rajan Chattamvelli
Tanjore, Tamil Nadu.

¹The semicolons that terminate each statement (in C/C++,Java) are omitted in all pseudocodes given in subsequent chapters to make it easy to port to VB, FORTRAN, and other programming languages without statement terminators.

Table of Contents

1. INTRODUCTION TO ALGORITHMS	1-1
1.1 Introduction	1-1
1.1.1 Categorisations of Algorithms	1-2
1.2 Complexity Notations	1-3
1.2.1 Importance of Algorithms	1-6
1.3 Algorithm Design	1-7
1.3.1 Algorithmic Paradigms	1-8
1.4 Efficiency of Algorithms	1-14
1.4.1 Algorithm vs Data	1-17
1.5 Algorithms For Minimum and Maximum	1-18
1.6 Algorithm to find Middle of Three Elements	1-19
1.7 Algorithm to find k^{th} Smallest or Largest Member	1-19
1.8 Exercises	1-20
References	1-24
2. MEASURES OF CENTRAL TENDENCY	2-1
2.1 Introduction	2-1
2.1.1 Population vs Sample	2-1
2.1.2 Parameter vs Statistic	2-2
2.2 Measures of Location	2-3
2.3 Arithmetic Mean	2-3
2.3.1 Updating Formula For Sample Mean	2-6
2.3.2 Short-cut Method for Mean	2-8
2.3.3 Weighted Mean	2-8
2.3.4 Updating Formula For Weighted Sample Mean	2-9
Advantages of Mean	2-9
2.4 Median	2-10
Advantages of Median	2-13
2.5 Mode	2-13
2.5.1 Advantages of Mode	2-14
2.6 Geometric Mean	2-16
2.7 Harmonic Mean	2-17
2.8 Which Mean is Most Appropriate?	2-18
2.9 Quartiles and Percentiles	2-19
2.9.1 Five-number Summary	2-19
2.10 Exercises	2-19

References	2-22
3. MEASURES OF DISPERSION	3-1
3.1 Dispersion	3-1
3.1.1 Range	3-2
3.1.2 Inter-Quartile Range	3-3
3.1.3 Averaged Absolute Deviation (AAD)	3-5
3.1.4 Variance Ratio	3-6
3.1.5 Variance	3-6
3.1.6 Recursive Algorithm For Sample Variance	3-9
3.2 Outliers in Data	3-10
3.2.1 Spatial vs Temporal Outliers	3-10
3.2.2 Graphical Detection of Outliers	3-11
3.3 Data Transformations	3-12
3.3.1 Change of Origin	3-12
3.3.2 Change of Scale	3-13
3.3.3 Standard Normalisation	3-13
3.3.4 Nonlinear Transformations	3-14
3.4 Exercises	3-14
References	3-16
4. MEASURES OF SKEWNESS AND KURTOSIS	4-1
4.1 Skewness	4-1
4.2 Measures of Skewness	4-2
4.2.1 Absolute and Relative Measure of Skewness	4-3
4.2.2 Pearson's Measure of Skewness	4-3
4.2.3 Galton's Measure of Skewness	4-4
4.2.4 Bowley's Measure of Skewness	4-5
4.2.5 New Measures of Skewness	4-5
4.3 Kurtosis	4-8
4.3.1 Measures of Kurtosis	4-9
4.3.2 Pearson's Kurtosis Measure	4-9
4.3.3 L-kurtosis	4-10
4.4 Exercises	4-10
References	4-13
5. MATRIX ALGORITHMS IN STATISTICS	5-1
5.1 Introduction	5-1
5.2 Vectors	5-2
5.3 Matrices	5-3
5.3.1 Special Vectors and Matrices	5-4
Special Vectors	5-4
Special Matrices	5-4
5.3.2 Determinants	5-7
5.3.3 Rules of Determinant	5-8
5.3.4 Matrix Inverse	5-8
5.4 Some Matrix Rules	5-9
5.4.1 Rules of Inverse	5-9

5.5	Quadratic Forms (QF)	5-11
5.6	Matrix Algorithms	5-11
5.6.1	Maximum and Minimum Elements of a Matrix	5-12
5.6.2	Matrix Multiplication Algorithms	5-13
5.6.3	Naive Matrix Multiplication	5-13
5.6.4	Partitioned Matrices	5-14
5.6.5	Strassen's Matrix Multiplication	5-14
5.7	Decomposition Algorithms	5-15
5.7.1	LU-Decomposition Algorithm (LU-DA)	5-15
5.7.2	QR-Decomposition Algorithm (QR-DA)	5-17
5.7.3	Cholesky-Decomposition	5-18
5.8	Eigenvalues and Eigenvectors	5-20
5.8.1	Properties of Eigenvalues	5-20
5.8.2	Eigenvalue Decomposition	5-21
5.8.3	Largest Eigenvalue	5-23
5.8.4	SVD-decomposition	5-23
5.9	Generalised Inverse of Matrices (GIM)	5-23
5.10	Solving Linear Equations	5-24
5.10.1	Linear Equation	5-24
5.10.2	Gaussian Elimination Algorithm (GEA)	5-25
5.10.3	Gaussian Elimination for Tri-diagonal Systems	5-27
5.11	Inhomogeneous Linear Equations	5-27
5.12	Iterative Algorithms for Linear Equations	5-27
5.12.1	Jacobi's Iterative Method (JIM)	5-28
5.12.2	Gauss-Siedel Iterative Method (G-SIM)	5-29
5.12.3	Successive Over-Relaxation Method (SORM)	5-30
5.13	Exercises	5-30
	References	5-34

8.43	Top 10 Books Read by Students from Group 42	8-53
8.44	Top 10 Books Read by Students from Group 43	8-54
8.45	Top 10 Books Read by Students from Group 44	8-55
8.46	Top 10 Books Read by Students from Group 45	8-56
8.47	Top 10 Books Read by Students from Group 46	8-57
8.48	Top 10 Books Read by Students from Group 47	8-58
8.49	Top 10 Books Read by Students from Group 48	8-59
8.50	Top 10 Books Read by Students from Group 49	8-60
8.51	Top 10 Books Read by Students from Group 50	8-61
8.52	Top 10 Books Read by Students from Group 51	8-62
8.53	Top 10 Books Read by Students from Group 52	8-63
8.54	Top 10 Books Read by Students from Group 53	8-64
8.55	Top 10 Books Read by Students from Group 54	8-65
8.56	Top 10 Books Read by Students from Group 55	8-66
8.57	Top 10 Books Read by Students from Group 56	8-67
8.58	Top 10 Books Read by Students from Group 57	8-68
8.59	Top 10 Books Read by Students from Group 58	8-69
8.60	Top 10 Books Read by Students from Group 59	8-70
8.61	Top 10 Books Read by Students from Group 60	8-71
8.62	Top 10 Books Read by Students from Group 61	8-72
8.63	Top 10 Books Read by Students from Group 62	8-73
8.64	Top 10 Books Read by Students from Group 63	8-74
8.65	Top 10 Books Read by Students from Group 64	8-75
8.66	Top 10 Books Read by Students from Group 65	8-76
8.67	Top 10 Books Read by Students from Group 66	8-77
8.68	Top 10 Books Read by Students from Group 67	8-78
8.69	Top 10 Books Read by Students from Group 68	8-79
8.70	Top 10 Books Read by Students from Group 69	8-80
8.71	Top 10 Books Read by Students from Group 70	8-81
8.72	Top 10 Books Read by Students from Group 71	8-82
8.73	Top 10 Books Read by Students from Group 72	8-83
8.74	Top 10 Books Read by Students from Group 73	8-84
8.75	Top 10 Books Read by Students from Group 74	8-85
8.76	Top 10 Books Read by Students from Group 75	8-86
8.77	Top 10 Books Read by Students from Group 76	8-87
8.78	Top 10 Books Read by Students from Group 77	8-88
8.79	Top 10 Books Read by Students from Group 78	8-89
8.80	Top 10 Books Read by Students from Group 79	8-90
8.81	Top 10 Books Read by Students from Group 80	8-91
8.82	Top 10 Books Read by Students from Group 81	8-92
8.83	Top 10 Books Read by Students from Group 82	8-93
8.84	Top 10 Books Read by Students from Group 83	8-94
8.85	Top 10 Books Read by Students from Group 84	8-95
8.86	Top 10 Books Read by Students from Group 85	8-96
8.87	Top 10 Books Read by Students from Group 86	8-97
8.88	Top 10 Books Read by Students from Group 87	8-98
8.89	Top 10 Books Read by Students from Group 88	8-99
8.90	Top 10 Books Read by Students from Group 89	8-100
8.91	Top 10 Books Read by Students from Group 90	8-101
8.92	Top 10 Books Read by Students from Group 91	8-102
8.93	Top 10 Books Read by Students from Group 92	8-103
8.94	Top 10 Books Read by Students from Group 93	8-104
8.95	Top 10 Books Read by Students from Group 94	8-105
8.96	Top 10 Books Read by Students from Group 95	8-106
8.97	Top 10 Books Read by Students from Group 96	8-107
8.98	Top 10 Books Read by Students from Group 97	8-108
8.99	Top 10 Books Read by Students from Group 98	8-109
8.100	Top 10 Books Read by Students from Group 99	8-110
8.101	Top 10 Books Read by Students from Group 100	8-111

List of Tables

1.1	Common Complexity Classes with Examples	1-5
2.1	Total money spent on Ice-cream (per week) & total hours TV Viewed (per week) by school kids	2-11
2.2	Predicting sales price of used cars	2-20
3.1	Marks obtained by students in an exam	3-4
3.2	Cumulative marks obtained by students	3-5
3.3	Average absolute deviation of student marks	3-6
3.4	Fuel filling by vehicles	3-8
3.5	Fuel filling example – mean and variance	3-9
3.6	Insurance premiums & # of Chat requests received	3-15
3.7	Odometer reading and age of cars	3-16
4.1	Skewness test for marks obtained by students	4-7
4.2	A comparison of skewness measures	4-8
4.3	Age of cars and servicing costs	4-11
5.1	Storing Special Matrices as One-dimensional Array	5-12
5.2	Properties of Matrix Eigenvalues and Eigenvectors	5-22
5.3	Progress of Convergence of Jacobi's Algorithm	5-29
6.1	Computing Table for Simple Linear Regression	6-4
6.2	Computing Table for Simple Ordinal Linear Regression	6-7
6.3	Multicollinearity Detection Techniques	6-10
6.4	Average number of minutes late per week	6-17
6.5	Average monthly electricity bill vs number of rooms	6-18
7.1	Height and weight of 10 adult persons	7-2
7.2	Height (scaled) and weight of 10 adult persons	7-3
7.3	Average market price of a brand of used cars (in '00)	7-5
7.4	Variance of Height (scaled) and Weight of 10 Adults	7-9
7.5	Family income vs annual travel spending	7-9
7.6	Computing Table for Sample Correlation	7-10
7.7	Customer satisfaction index for regular visitors in a supermarket	7-13
7.8	Auto-accident break-up among left & right handed drivers	7-15
7.9	Web-site ratings by 8 users	7-17
8.1	Income and insurance premium amount of 25 customers	8-10
8.2	Results of clustering using k-means (k=3) and Hierarchical clustering (with complete linkage, Ward's method)	8-17
8.3	Monthly income and total minutes online per week	8-22
11.1	Table for Estimating Mixture Model Parameters	11-16

11.2 Table for Exercise 19	11-18
12.1 Inversion Method for Some Statistical Distributions	12-8
12.2 Random Numbers from Some Statistical Distributions	12-9
1 List of Acronyms	A-10
2 List of Internet Tables	A-11
3 List of Related Journals and Resources	A-12

1-8	Computer Complexity Classes With Examples	1.1
2-11	Run times shown on log-log (per word) vs. total points	1.2
2-20	LA API (per word) vs. total points	1.2
3-1	Beginning values for simulations in no option	1.8
3-2	Initial options of call options by strike	1.8
3-3	Computational costs of different numerical methods	1.8
3-4	Approximations of option prices	1.8
3-5	High quality derivatives	1.8
3-6	High quality examples - mean sum squared	1.8
3-12	Numerical simulations of the CIR interest rate model	1.8
3-16	Quadratic growth rates of calls to zero	1.8
3-17	Square-root test for means of stochastic processes	1.4
3-18	Square-root test for means of stochastic processes	1.4
3-19	A comparison of two methods	1.4
3-20	Value of one unitary cost	1.4
3-21	Scaling separately variables as One-dimensional API	1.8
3-22	Importance of matrix multiplication and factorizations	2.8
3-23	Properties of Considerations of Today's Algorithm	2.8
4-0	Combining large numbers of simple linear regression	1.6
5-0	Combining large numbers of simple linear regression	1.6
01-0	Computing large tables of simple linear regression	1.6
71-0	Computing large tables of simple linear regression	1.6
81-0	Average number of jumps per best word	4.4
82-0	Average number of jumps per word	4.4
83	Average number of jumps per word	4.4
84	Average number of jumps per word	4.4
85	Average number of jumps per word	4.4
86	Average number of jumps per word	4.4
87	Average number of jumps per word	4.4
88	Average number of jumps per word	4.4
89	Average number of jumps per word	4.4
90	Average number of jumps per word	4.4
01-7	Computing large tables of simple linear regression	6.5
01-8	Computing large tables of simple linear regression	6.5
01-9	Computing large tables of simple linear regression	6.5
01-10	Computing large tables of simple linear regression	6.5
01-11	Computing large tables of simple linear regression in a shorter	6.5
01-12	Computing large tables of simple linear regression in a shorter	6.5
01-13	Computing large tables of simple linear regression in a shorter	6.5
01-14	Computing large tables of simple linear regression in a shorter	6.5
01-15	Computing large tables of simple linear regression in a shorter	6.5
01-16	Computing large tables of simple linear regression in a shorter	6.5
01-17	Computing large tables of simple linear regression in a shorter	6.5
01-18	Computing large tables of simple linear regression in a shorter	6.5
01-19	Computing large tables of simple linear regression in a shorter	6.5
01-20	Computing large tables of simple linear regression in a shorter	6.5
01-21	Computing large tables of simple linear regression in a shorter	6.5
01-22	Computing large tables of simple linear regression in a shorter	6.5
01-23	Computing large tables of simple linear regression in a shorter	6.5
01-24	Computing large tables of simple linear regression in a shorter	6.5
01-25	Computing large tables of simple linear regression in a shorter	6.5
01-26	Computing large tables of simple linear regression in a shorter	6.5
01-27	Computing large tables of simple linear regression in a shorter	6.5
01-28	Computing large tables of simple linear regression in a shorter	6.5
01-29	Computing large tables of simple linear regression in a shorter	6.5
01-30	Computing large tables of simple linear regression in a shorter	6.5
01-31	Computing large tables of simple linear regression in a shorter	6.5
01-32	Computing large tables of simple linear regression in a shorter	6.5
01-33	Computing large tables of simple linear regression in a shorter	6.5
01-34	Computing large tables of simple linear regression in a shorter	6.5
01-35	Computing large tables of simple linear regression in a shorter	6.5
01-36	Computing large tables of simple linear regression in a shorter	6.5
01-37	Computing large tables of simple linear regression in a shorter	6.5
01-38	Computing large tables of simple linear regression in a shorter	6.5
01-39	Computing large tables of simple linear regression in a shorter	6.5
01-40	Computing large tables of simple linear regression in a shorter	6.5
01-41	Computing large tables of simple linear regression in a shorter	6.5
01-42	Computing large tables of simple linear regression in a shorter	6.5
01-43	Computing large tables of simple linear regression in a shorter	6.5
01-44	Computing large tables of simple linear regression in a shorter	6.5
01-45	Computing large tables of simple linear regression in a shorter	6.5
01-46	Computing large tables of simple linear regression in a shorter	6.5
01-47	Computing large tables of simple linear regression in a shorter	6.5
01-48	Computing large tables of simple linear regression in a shorter	6.5
01-49	Computing large tables of simple linear regression in a shorter	6.5
01-50	Computing large tables of simple linear regression in a shorter	6.5
01-51	Computing large tables of simple linear regression in a shorter	6.5
01-52	Computing large tables of simple linear regression in a shorter	6.5
01-53	Computing large tables of simple linear regression in a shorter	6.5
01-54	Computing large tables of simple linear regression in a shorter	6.5
01-55	Computing large tables of simple linear regression in a shorter	6.5
01-56	Computing large tables of simple linear regression in a shorter	6.5
01-57	Computing large tables of simple linear regression in a shorter	6.5
01-58	Computing large tables of simple linear regression in a shorter	6.5
01-59	Computing large tables of simple linear regression in a shorter	6.5
01-60	Computing large tables of simple linear regression in a shorter	6.5

List of Algorithms

1.1	Recursive Algorithm for the Sample Mean	1-3
1.2	Iterative Algorithm for the Sample Mean	1-4
1.3	Two Iterative Algorithms for Powers (x^n)	1-7
1.4	Two Recursive Algorithms for x^n for any n (+ve or -ve)	1-8
1.5	Dynamic Programming Algorithm of Combinations	1-11
1.6	Pseudocode for Iterative & Recursive Combinations	1-13
1.7	Algorithm to find Maximum and Minimum	1-14
1.8	Approx. Factorial of +ve integer directly & using log	1-16
1.9	Iterative Logarithmic and Recursive algorithms to find Combinations of n things taken x at a time ($x \leq n$)	1-17
1.10	Iterative algorithm to find the Minimum and Maximum	1-18
1.11	Middle and MinMax of 3 Elements	1-19
1.12	Algorithm to find k-th smallest or k-th largest member	1-20
1.13	Pseudocode for question 19	1-22
1.14	Pseudocode for question 37	1-24
2.1	Algorithm for Updating Sample Mean (add/delete data) . .	2-5
2.2	Algorithm for 1-Trimmed Mean	2-7
2.3	Recursive Algorithm for Weighted Sample Mean	2-8
2.4	Algorithm for the Sample Median	2-12
2.5	Algorithm for the Sample Mode	2-14
2.6	Algorithm for Sample Geometric Mean	2-16
2.7	Recursive Algorithm for Sample Geometric Mean	2-17
2.8	Algorithm for Sample Harmonic Mean	2-18
2.9	Iterative Error-Corrected Algorithm for Sample Mean . .	2-22
3.1	Algorithm for Sample Range	3-2
3.2	Algorithm for 1-Trimmed Range	3-3
3.3	Recursive Algorithm for Sample Range	3-4
3.4	Algorithm for Sample Mean Absolute Deviation	3-7
3.5	Recursive Algorithms for the Sample Variance	3-10
4.1	Algorithm for Pearson's η	4-4
5.1	Algorithm for Matrix Inverse	5-10
5.2	Algorithm for Minimum and Maximum Matrix entries . .	5-13
5.3	Naive and Read-optimised Matrix Multiplication	5-14
5.4	Iterative Algorithm for LU- and QR Decomposition	5-16
5.5	Cholesky-Algorithm for Matrix-decomposition	5-18
5.6	Givens Rotation for matrix-decomposition	5-19
5.7	Power method for the largest eigen value	5-21
