## *Preface*

These two volumes deal with the quantum theory of the electronic structure of molecules. Implicit in the term *ab initio* is the notion that approximate solutions of Schrödinger's equation are sought "from the beginning," i.e., without recourse to experimental data. From a more pragmatic viewpoint, the distinguishing feature of *ab initio* theory is usually the fact that no approximations are involved in the evaluation of the required molecular integrals. Consistent with current activity in the field, the first of these two volumes contains chapters dealing with methods *per se*, while the second concerns the application of these methods to problems of chemical interest. In a sense, the motivation for these volumes has been the spectacular recent success of *ab initio* theory in resolving important chemical questions. However, these applications have only become possible through the less visible but equally important efforts of those developing new theoretical and computational methods and models.

*Henry F. Schaefer*

# *Contents of Volume 4*

*Chapter 1.* *A Priori* Geometry Predictions

*J. A. Pople*

*Chapter 2.* Barriers to Rotation and Inversion

*Philip W. Payne and Leland C. Allen*

*Chapter 3.* Hydrogen Bonding and Donor–Acceptor Interactions

*Peter A. Kollman*

*Chapter 4.* Direct Use of the Gradient for Investigating Molecular Energy Surfaces

*Péter Pulay*

*Chapter 5.* Transition Metal Compounds

*A. Veillard and J. Demuynck*

*Chapter 6.* Strained Organic Molecules

*Marshall D. Newton*

*Chapter 7.* Carbonium Ions: Structural and Energetic Investigations

*Warren J. Hehre*

*Chapter 8.* Molecular Anions

*Leo Radom*

*(continued)*

*Chapter 9.* Electron Spectroscopy

*Maurice E. Schwartz*

*Chapter 10.* Molecular Fine Structure

*Stephen R. Langhoff and C. William Kern*

---

# *Contents*

Contents of Volume 4 . . . . .	xix
<b>Chapter 1. Gaussian Basis Sets for Molecular Calculations</b>	
<i>Thom. H. Dunning, Jr. and P. Jeffrey Hay</i>	
1. Introduction . . . . .	1
1.1. Slater Functions and the Hydrogen Molecule . . . . .	1
1.2. Gaussian Functions and the Hydrogen Atom . . . . .	3
2. Hartree–Fock Calculations on the First Row Atoms . . . . .	5
2.1. Valence States of the First Row Atoms . . . . .	6
2.2. Rydberg States of the First Row Atoms . . . . .	7
2.3. Positive Ions of the First Row Atoms . . . . .	9
2.4. Negative Ions of the First Row Atoms . . . . .	9
2.5. Contraction of Atomic Basis Sets . . . . .	10
3. Hartree–Fock Calculations on Molecules Containing First Row Atoms . . . . .	12
3.1. Convergence of the Atomic Basis Sets . . . . .	12
3.2. Addition of Polarization Functions . . . . .	12
3.3. Calculations with the [3s2p1d] and [2s1p] Sets . . . . .	15
4. Basis Sets for the Second and Third Row Atoms . . . . .	17
Appendix 1. Bibliography of Gaussian Basis Sets for <i>Ab Initio</i> Calculations on the Electronic Structure of Molecules . . . . .	21
Appendix 2. The [3s2p] Contracted Gaussian Basis Sets for the First Row Atoms, Including a [2s] Hydrogen Set . . . . .	23
Appendix 3. The [6s4p] Contracted Gaussian Basis Sets for the Second Row Atoms, Including Diffuse Functions for Rydberg and Negative Ion States . . . . .	24
References . . . . .	26

*Chapter 2. The Floating Spherical Gaussian Orbital Method*

*Arthur A. Frost*

1.	Desiderata for a Simple <i>Ab Initio</i> Method . . . . .	29
1.1.	A Single Slater Determinant . . . . .	30
1.2.	Easy Integrals—Economical Computation . . . . .	31
1.3.	Relation to Chemical Concepts . . . . .	31
2.	The Simple FSGO Method Defined . . . . .	31
2.1.	Gaussians as Local Orbitals . . . . .	31
2.2.	Absolute Minimal Basis Set . . . . .	32
2.3.	Mathematical Derivation . . . . .	33
2.4.	Computer Programming and Computations . . . . .	34
3.	FSGO Results . . . . .	35
3.1.	Calculation of LiH as a Simple Example . . . . .	35
3.2.	Ethylene as a Further Example . . . . .	36
3.3.	General Results . . . . .	38
4.	Comparison with Standard SCF Methods . . . . .	42
5.	Extensions of the Simple Method . . . . .	43
5.1.	Ellipsoidal Gaussians . . . . .	43
5.2.	Group Orbitals . . . . .	43
5.3.	SCF Calculations with FSGOs . . . . .	44
5.4.	Molecular Fragment Method . . . . .	45
6.	Conclusions . . . . .	45
	Addendum . . . . .	46
	References . . . . .	46

*Chapter 3. The Multiconfiguration Self-Consistent Field Method*

*Arnold C. Wahl and G. Das*

1.	Introduction . . . . .	51
2.	CI-Matrix Elements and Solution of the Secular Equation . . . . .	53
3.	MCSCF Theory and Orbital Optimization . . . . .	57
3.1.	Formulation . . . . .	57
3.2.	Solution of the Fock Equations . . . . .	60
3.3.	MCSCF Theory of the Excited States . . . . .	63
4.	Alternative Methods for Attaining MCSCF Wave Functions . . . . .	65
4.1.	Hinze's Method of Solution of the MCSCF Equations . . . . .	65
4.2.	Generalized Brillouin's Theorem . . . . .	66
4.3.	Solution of the MCSCF Problem by Using Generalized Brillouin's Theorem . . . . .	67

5. Applications . . . . .	68
5.1. Choice of Configurations: Optimized Valence Configurations . . . . .	68
5.2. Choice of Basis Sets . . . . .	75
6. Summary and Conclusion . . . . .	77
References . . . . .	78

**Chapter 4. The Self-Consistent Field Equations for Generalized Valence Bond and Open-Shell Hartree–Fock Wave Functions**

*Frank W. Bobrowicz and William A. Goddard III*

1. Introduction . . . . .	79
2. The Energy Expression . . . . .	80
3. Wave Functions . . . . .	81
3.1. Hartree–Fock Wave Functions . . . . .	82
3.2. GVB Wave Functions . . . . .	87
3.3. Separated-Pair Wave Functions . . . . .	92
4. The Basic Variational Equations . . . . .	93
4.1. The Variational Equation and Fock Operators . . . . .	94
4.2. The Variational Conditions . . . . .	96
4.3. The Orbital Correction Equation . . . . .	98
5. The Iterative Self-Consistent Field Equations . . . . .	101
5.1. OCBSE Optimization . . . . .	102
5.2. Orbital Mixing . . . . .	105
5.3. Correlated Pair Coefficient Optimization . . . . .	114
5.4. The Iterative Sequence . . . . .	116
6. Summary . . . . .	118
7. Comparison with Previous Work . . . . .	120
References . . . . .	126

**Chapter 5. Pair Correlation Theories**

*Werner Kutzelnigg*

1. Introduction . . . . .	129
1.1. One-Electron and Electron-Pair Theories . . . . .	129
1.2. Why Electron-Pair Theories? . . . . .	130

2.	Cluster Expansion of the Wave Function . . . . .	131
2.1.	The Idea of Separated Pairs . . . . .	131
2.2.	The Concept of Cluster Expansions: Analogies from Statistical Mechanics . . . . .	134
2.3.	The Exponential Ansatz of Coester and Kümmel . . . . .	136
2.4.	The Hierarchy of the Cluster Equations . . . . .	138
2.5.	The Brillouin–Brueckner Condition . . . . .	140
2.6.	The Hierarchy of Equations for Linked Pair Clusters . . . . .	142
3.	Perturbation Theory of Electron Correlation . . . . .	144
3.1.	Rayleigh–Schrödinger versus Brillouin–Wigner Perturbation Theory . . . . .	144
3.2.	Different Variants of RS Perturbation Theory . . . . .	147
3.3.	Decoupling of the First-Order Pairs . . . . .	150
3.4.	Invariance of the Second-Order Energy with Respect to Unitary Transformations, Canonical and Localized Pairs, and Reducible and Irreducible Pairs . . . . .	153
3.5.	Higher Orders of Perturbation Theory . . . . .	155
4.	The Independent Electron-Pair Approximation (IEPA), the Coupled Electron-Pair Approximation (CEPA), and Related Approximations . . . . .	157
4.1.	Preliminary Remarks . . . . .	157
4.2.	Pedestrian Derivation of the Independent Electron-Pair Approximation (IEPA) . . . . .	158
4.3.	The Coupled Electron-Pair Approximation (CEPA) . . . . .	160
4.4.	The Spin-Adapted Independent Electron-Pair Approximation . . . . .	161
4.5.	The IEPA–PNO and the CEPA–PNO Methods . . . . .	163
4.6.	IEPA and CEPA for Open-Shell States . . . . .	165
4.7.	The PNO–CI Method . . . . .	166
4.8.	Nesbet's Hierarchy of <i>n</i> th-Order Bethe–Goldstone Equations . . . . .	167
4.9.	The Independent-Pair Potential Approximation (IPPA) . . . . .	168
5.	Toward a Rigorous Treatment of Electron Correlation . . . . .	168
5.1.	Variational Treatment Based on the $\exp(S)$ Ansatz . . . . .	168
5.2.	Unitary Ansatz for the Correlated Wave Function . . . . .	170
5.3.	Which is the Best CEPA? . . . . .	172
5.4.	Single Substitution and Brueckner Orbitals . . . . .	174
5.5.	Importance of Higher than Two-Particle Clusters . . . . .	176
5.6.	Need for Zeroth-Order Multiconfiguration Wave Functions . . . . .	178
6.	Some Numerical Results . . . . .	179
	References . . . . .	182

***Chapter 6. The Method of Configuration Interaction****Isaiah Shavitt*

1. Introduction . . . . .	189
1.1. Correlation Energy . . . . .	189
1.2. Configuration Interaction . . . . .	190
2. Formalism . . . . .	192
2.1. The Linear Variation Method . . . . .	192
2.2. Configuration Functions . . . . .	195
2.3. Orbitals and Basis Functions . . . . .	196
2.4. Matrix Elements and Integrals . . . . .	197
2.5. Outline of Computational Procedure . . . . .	198
3. Integrals and Integral Transformations . . . . .	199
3.1. Notes on Matrix Storage . . . . .	199
3.2. Basis-Set Integrals . . . . .	201
3.3. Orthogonalization . . . . .	202
3.4. Integral Transformations . . . . .	205
3.5. Use of Symmetry . . . . .	208
4. Construction of Configuration Functions . . . . .	210
4.1. Exchange Symmetry and General Considerations . . . . .	210
4.2. Spin-Adapted CFs . . . . .	211
4.3. Symmetry-Adapted CFs . . . . .	216
5. Hamiltonian Matrix Evaluation . . . . .	219
5.1. Projection Operators and Slater Determinants . . . . .	219
5.2. Spin-Adapted CFs . . . . .	222
5.3. Symmetry-Adapted CFs . . . . .	227
6. The Matrix Eigenvalue Problem . . . . .	228
6.1. General Considerations . . . . .	228
6.2. Standard Methods . . . . .	230
6.3. Iterative Methods for Large Matrices . . . . .	232
7. Density Matrices and Electronic Properties . . . . .	238
7.1. Introduction and Definitions . . . . .	238
7.2. The Calculation of Density Matrices and Electronic Properties . . . . .	240
8. Selection of Basis Sets and Orbitals . . . . .	243
8.1. Basis Sets . . . . .	243
8.2. Remarks on the Choice of Orbitals . . . . .	245
8.3. Natural Orbitals . . . . .	248
8.4. MCSCF and GVB Orbitals . . . . .	251
9. Selection of Configuration Functions . . . . .	253
9.1. Excitation Levels, Perturbation Theory, and Cluster Expansions . . . . .	253

9.2. Preselection Schemes and Root Configurations . . . . .	258
9.3. Energy Contributions and Individual CF Selection . . . . .	262
10. Concluding Remarks . . . . .	266
References . . . . .	267

***Chapter 7. The Direct Configuration Interaction Method from Molecular Integrals***

*Björn O. Roos and Per E. M. Siegbahn*

1. Introduction . . . . .	277
2. The CIMI Method . . . . .	279
2.1. General Scheme . . . . .	279
2.2. Coupling Coefficients . . . . .	282
2.3. Diagonalization Schemes . . . . .	285
2.4. Approximate Natural Orbitals . . . . .	288
3. Application to Some Different Types of CI Expansions . . . . .	291
3.1. A Closed-Shell Single-Determinant Reference State . . . . .	291
3.2. Expansion in Single Determinants . . . . .	298
3.3. Complete CI Expansions . . . . .	301
4. Examples of CI Calculations Performed with the CIMI Method . . . . .	303
4.1. Studies on Closed-Shell Systems . . . . .	304
4.2. Calculations Based on Expansion in Single Determinants . . . . .	308
4.3. Three-Electron Complete CI Calculations . . . . .	311
4.4. Second-Order Properties . . . . .	312
5. Concluding Remarks . . . . .	315
References . . . . .	315

***Chapter 8. A New Method for Determining Configuration Interaction Wave Functions for the Electronic States of Atoms and Molecules: The Vector Method***

*R. F. Hausman, Jr. and C. F. Bender*

1. Introduction . . . . .	319
2. The Vector Method . . . . .	322
3. Computational Details . . . . .	326
4. LiH Calculation . . . . .	328
5. H <sub>2</sub> O Double-Zeta Calculation . . . . .	330
6. Vertical Transition Energies in Water . . . . .	332
7. Improvement of the Vector Method . . . . .	335
8. Conclusions and Discussion . . . . .	336
References . . . . .	337

**Chapter 9.** The Equations of Motion Method: An Approach to the Dynamical Properties of Atoms and Molecules

*Clyde W. McCurdy, Jr., Thomas N. Rescigno,  
Danny L. Yeager, and Vincent McKoy*

1. Introduction . . . . .	339
2. Theory . . . . .	342
3. Excitation Energies and Oscillator Strengths of Electronic Transitions in Molecules . . . . .	349
3.1. States of N <sub>2</sub> . . . . .	349
3.2. States of CO . . . . .	353
3.3. The T and V States of Ethylene . . . . .	356
3.4. States of CO <sub>2</sub> . . . . .	357
3.5. States of Benzene . . . . .	359
