Proteins in food processing

Related titles from Woodhead's food science, technology and nutrition list:

Starch in food: Structure, function and applications (ISBN 1 85573 731 0)

Starch is both a major component of plant foods and an important ingredient for the food industry. This book reviews what we know about starch structure and functionality, the growing range of starch ingredients and their use to improve the nutritional and sensory quality of food.

Handbook of minerals as nutritional supplements (ISBN 0 8493 1652 9)

This handbook provides a comprehensive presentation and interprets the current status of research on various mineral supplements.

Yeasts in food (ISBN 1 85573 706 X)

Yeasts play a crucial role in the sensory quality of a wide range of foods. This book provides a comprehensive review of the methods for their detection, identification and analysis as well as the role of yeasts in several food products including dairy products, meat, fruit, bread and beverages.
