Preface

The third edition of *Business Statistics: Contemporary Decision Making* is written and designed for a two-semester introductory undergraduate business statistics course or an MBA-level introductory course. In addition, with 18 chapters, the third edition lends itself nicely to adaptation for a one-semester introductory business statistics course. The text is written with the assumption that the student has a college algebra mathematical background. No calculus is used in the presentation of material in the text.

The text is targeted for the large number of business students who will not be statisticians but rather will become decision makers in the business community. The quantitative decision-making skills and statistical understanding gained from this text will enable students to perform well in the business world and make better decisions. As in the second edition, the concepts of statistics are presented in a setting of business decision making through the use of real business data and applications. To this end, real data and examples from the business environment appear virtually everywhere in the text.

South-Western College Publishing is very proud to publish the third edition of Ken Black's *Business Statistics: Contemporary Decision Making*. We sought and gained the experience of current users and their suggestions for improvement. While there was widespread support for the very complete topical coverage, pedagogy, and context of the second edition; many users—including the author—wanted a shorter text. We responded by creating a new edition that maintains the integrity of approach and subject matter, but is leaner and more efficient. With the exception of a few minor items, we retained virtually all topics yet made significant strides in reducing the size of the text by placing the databases on a CD-ROM included in every text, deleting nonessential features and redundant explanations, and using a more creative layout.

Several new features of the third edition set this text apart from others in the field. These include:

Changes for the Third Edition

Presentation of Microsoft® Excel and MINITAB Software Output

The third edition has a strong focus on *both* Excel and MINITAB software packages. More than 250 Excel 97 or MINITAB Release 12 computer-generated outputs are displayed.

Excel, because it is a part of Microsoft Office, has been installed on millions of computers around the world. Most students have access to Excel at home, school, or work. Because of the one-two punch of the **Data Analysis** tool and the paste function feature, Excel has considerable statistical capability.

MINITAB is also featured because it has done an excellent job of keeping pace with the continual changes and demands of statistics in business. MINITAB Release 12, featured in this text, has techniques for analyzing proportions, greater data and file management capabilities including multiple worksheets, the capability of performing polynomial regression, and clarified and strengthened presentation of quality tools. In addition, the MINITAB spreadsheet is easier than ever to use.

New Topical Coverage

Using Histograms to Get an Initial Overview of the Data has been added to the graphical depiction section of Chapter 2. Because of the widespread use of computers and statistically oriented software packages, many analysts find it useful to get an overview of data by generating a histogram. The histogram can display the general shape of the distribution of data, which can give the analyst a framework within which to interpret and use other statistical techniques.

Another new topic, *six sigma*, is located in Chapter 17. Six sigma is a continuous quality improvement technique being used as a philosophy and a methodology in many businesses today. Any contemporary discussion of continuous quality improvement and statistical process control without six sigma is incomplete.

New Problems

All second-edition problems were examined for timeliness, appropriateness, clarity, and logic. Those that fell short were replaced or rewritten. Many new problems were constructed in an effort to maximize the usefulness of each. All problems with time-based values were updated. The total number of problems in the text was not increased but rather a concerted effort was made to include only problems that make a significant contribution to the learning process.

All demonstration problems and example problems were thoroughly reviewed and edited for effectiveness. Virtually all example and demonstration problems in the third edition are business-oriented and contain the most current data available.

As with the previous edition, problems are located at the end of most sections in the chapters. A significant number of additional problems are provided at the end of each chapter in the Supplementary Problems. The Supplementary Problems are “scrambled”—problems using the various techniques in the chapter are mixed—so that students can test themselves on their ability to discriminate and differentiate ideas and concepts.

New Databases

The third edition contains seven completely reworked databases, including a new stock market database, all of which are available in both Excel and MINITAB format ready for use. A manufacturing database, a financial database, a stock market database, an international employment database, an energy database, a healthcare database, and an agri-business database provide over 8350 observations and 56 variables. All data are real and from reliable sources that users will recognize: the U.S. Bureau of Labor Statistics, the New York Stock Exchange, the U.S. Department of Agriculture, Moody's Handbook of Common Stocks, the American Hospital Association, and the U.S. Bureau of the Census. Four of the seven databases have time-series data; one contains 168 months of time-series data ideal for demonstrating and analyzing forecasting decomposition techniques.

CD-ROM

As mentioned earlier in this preface, data files are included on the CD-ROM packaged with each textbook. All databases on the CD-ROM are in both Excel and MINITAB formats for easy access and use. The CD-ROM also contains Excel and MINITAB files of data from text problems and cases in which there are more than 10 data entries. Instructors and students now have the option of analyzing the larger data sets using the computer. For those who wish to use them, the CD-ROM also contains updated versions of the Decision Dilemma and In Reaction boxes that appeared in the second edition. In addition, the section on Advanced Exponential Smoothing Techniques (from Chapter 15) has been removed from the text, updated, and placed on the CD-ROM. Derivation of the slope and intercept formulas from Chapter 12 are also included on the CD-ROM along with a tutorial on summation theory.

Interpreting the Output

In most chapters, the end-of-chapter Supplementary Problems section contains a new subsection entitled *Interpreting the Output*. This new subsection complements the other two subsections, *Calculating the Statistics* and *Testing Your Understanding*, by providing several problems (usually four) in which the student is given software output and asked to interpret, discuss, or analyze the output. *Interpreting the Output* places more emphasis on understanding and interpreting statistics for decision making.

New Cases

Six of the eighteen cases in the third edition are entirely new. All other cases have been updated and revised with new information about the company and the business dilemma that is being studied. The six new cases analyze problems and opportunities facing DiGiorno Pizza, Colgate-Palmolive, Fuji Film, Shell Oil, Thermatrix, and Frito-Lay.

Statistics in Business Today

Each chapter of the third edition contains a new boxed feature, Statistics in Business Today, that presents an example of how techniques or concepts from that chapter currently are being used in business. These interesting features reinforce the notion that statistics provides important tools that are being used in business every day in many different ways.

Website

The third edition has a website that contains many valuable features. One such feature, Statistics on the Internet, is included for each text chapter. By providing information about and Internet addresses for many statistical websites, this feature serves as a guide to websites created by educators, businesses, and individuals. These websites contain tutorials on various statistical concepts and techniques, interactive analysis opportunities, glossaries of statistical concepts, additional databases, additional examples of the use of statistics, and many other interesting and informative items. Statistics on the Internet can be very helpful to both instructors and students in finding material that augments both distance learning courses and traditional courses.

Using password protection, instructors may access the Instructor's Manual; the PowerPoint slides are available to both students and instructors. Through this website Ken Black can also provide updated versions of the Decision Dilemma and In Response features from the second edition, as well as additional examples of business applications related to various statistical techniques.

The third edition of *Business Statistics: Contemporary Decision Making* is organized in a manner similar to the second edition. However, in an effort to streamline the book and yet retain the integrity of topical coverage and pedagogy, some features—including the Decision Dilemma, In Response, Focus Boxes, and Statistics on the Internet—have been moved from the main text to the CD-ROM or the text website. The Focus Boxes of the second edition have been replaced with a Statistics in Business Today feature within each chapter.

Each chapter of the third edition contains learning objectives, demonstration problems, problems and supplementary problems, a Statistics in Business Today boxed feature, a chapter summary, key terms, formulas, an Ethical Considerations box, an Analyzing the Databases section, a case, and a Using the Computer section.

- **Learning Objectives.** Each chapter begins with a statement of the chapter's main learning objectives. This statement gives the reader a list of key topics that will be discussed and the goals to be achieved from studying the chapter.
- **Demonstration Problems.** Virtually every section of every chapter in the third edition contains demonstration problems. A demonstration problem contains both an example problem and its solution, and is used as an additional pedagogical tool to supplement explanations and examples.
- **Problems.** There are nearly 1000 problems in the text. Most problems utilize real data gathered from a plethora of sources. Problems for practice are found at the end of almost every section of the text. At the end of each chapter is an extensive set of Supplementary Problems. These problems are divided into three groups: Calculating the Statistics, which are strictly computation problems; Testing Your Understanding, which are problems for

Features and Benefits

application and understanding; and Interpreting the Output, which are problems that require the interpretation and analysis of software output.

- **Statistics in Business Today.** Each Statistics in Business Today feature contains an interesting application of how techniques of that particular chapter are used in the business world today. This feature replaces the Focus Boxes of the second edition
- **Chapter Summary.** Each chapter concludes with a summary of the important concepts, ideas, and techniques of the chapter. This feature can serve as a preview of the chapter as well as a chapter review.
- **Key Terms.** Important terms are printed and defined in the margin of the text near where they are discussed. At the end of the chapter, a list of the key terms defined in the chapter is presented. In addition, these terms appear with their definitions in an end-of-book Glossary.
- **Formulas.** Important formulas in the text are highlighted and boxed to make it easy for a reader to locate them. At the end of the chapter, most of the chapter's formulas are listed together as a handy reference.
- **Ethical Considerations.** The Ethical Considerations feature underscores the potential misuse of business statistics. Topics discussed include lying with statistics, failing to meet statistical assumptions, failing to include pertinent information for decision makers, and other such matters of principle.
- **Analyzing the Databases.** There are seven major databases located on the CD-ROM that accompanies the third edition. The end-of-chapter Analyzing the Databases section contains several questions/problems that require the application of techniques from the chapter to data in the variables of the databases. The assumption is that most of these questions/problems will be solved by using a computer.
- **Case.** Each end-of-chapter case is based on a real company. These cases give the student an opportunity to use statistical concepts and techniques presented in the chapter to solve a business dilemma. Some cases feature very large companies—such as Shell Oil, Coca-Cola, or Colgate-Palmolive. Others pertain to small businesses—such as Thermatrix, Robotron, or Fletcher-Terry—that have overcome obstacles to survive and thrive. Most cases include raw data (also located on the CD-ROM) for analysis and questions that encourage the student to use several of the techniques presented in the chapter. In many cases, the student must analyze software output in order to reach conclusions or make decisions.
- **Using the Computer.** The Using the Computer section contains directions for producing the Excel 97 and MINITAB Release 12 software output presented in the chapter. It is assumed that students have a general understanding of a Microsoft® Windows environment. Directions include specifics about menu bars, drop-down menus, and dialog boxes. Not every detail of every dialog box is discussed; the intent is to provide enough information for students to produce the same statistical output analyzed and discussed in the chapter.

Ancillary Teaching and Learning Materials

Two ancillaries are available to students either through their bookstore or for direct purchase through the online catalog at <http://www.swcollege.com>.

- Prepared by textbook author Ken Black, the *Solutions Manual and Study Guide* (ISBN: 0-324-00923-2) provides students with review materials, study questions with answers, and solutions to the odd-numbered problems for each textbook chapter.
- *An Excel Companion for Business Statistics* (ISBN: 0-538-89088-6), by David Eldredge of Murray State College, provides step-by-step instructions for using Microsoft® Excel 97 to solve many of the problems included in an introductory business statistics course.

South-Western's business statistics textbooks are available with **MINITAB Student Software Version 12** as a bundle option for only a small increase in price. MINITAB Student Software Version 12, which includes all the methods needed for introductory business statistics courses, is a streamlined and economical version of MINITAB Professional. Contact your local South-Western representative for more details.

The following instructor support materials are available to adopters from the Thomson Learning Academic Resource Center at 800-423-0563 or through www.swcollege.com.

- **Instructor's Resource Kit** on CD-ROM (ISBN: 0-324-00924-0)—All instructor ancillaries are now provided on a CD-ROM. Included in this convenient format are:

Instructor's Manual—The *Instructor's Manual*, prepared by Ken Black, contains chapter outlines, teaching strategies, and full solutions to all problems and cases presented in the text.

PowerPoint™ Presentation Slides—The presentation slides contain graphics to help instructors create stimulating lectures. The PowerPoint 97 slides may be adapted using PowerPoint software to facilitate classroom use.

Test Bank—Prepared by Aaron Brown of Texas A & M University–Corpus Christi, the Test Bank includes multiple choice questions for each chapter. The Test Bank is provided in Microsoft® Word format on the CD-ROM.

ExamView—This computerized testing software comes on a CD-ROM also, and allows instructors to create, edit, store, and print exams.

South-Western and I thank the reviewers and advisors who cared enough and took the time to provide us with their excellent insights and advice, which was used to reshape and mold the text into the third edition. These colleagues include:

Randy Anderson, University of California–Fresno
 Aaron Brown, Texas A & M University–Corpus Christi
 Louise J. Clark, Jacksonville State University (AL)
 Stuart M. Glosser, University of Wisconsin–Whitewater
 David D. Krueger, St. Cloud State University
 Leigh Lawton, University of St. Thomas (MN)
 WanSoo T. Rhee, Ohio State University
 Richard Scott, University of Arizona–Tucson
 Daniel G. Shimshak, University of Massachusetts–Boston
 Gary Yoshimoto, St. Cloud State University

Special thanks to Aaron Brown, Texas A & M University–Corpus Christi, who again prepared the Test Bank for the third edition. As always, I wish to recognize my colleagues at the University of Houston–Clear Lake for their continued interest and support of this project. In particular, I want to thank William Staples, President; Jim Hayes, Provost; and Ted Cummings, Dean of the School of Business, for their personal interest in the book and their administrative support. Mike Hanna and Vance Etnyre, decision sciences faculty members at UHCL, have spent many hours dialoging with me about the text and giving me important ideas from which to write and edit. Many thanks to them.

There are many people within the South-Western College Publishing group that I would like to thank for their invaluable assistance on this project. In particular, I would like to cite: Charles McCormick, Jr., senior acquisitions editor, who shepherded this revision from its inception and provided a positive working climate; Joe Sabatino, senior marketing manager, who helped position the book in the marketplace and provided market insights; Alice Denny, senior development editor, who directed the reviewing and revision processes and has kept the text and ancillaries on schedule; and Sandra Gangelhoff, production editor, who provided her usual professional assistance in producing the finished text.

I want to express a special appreciation to my wife of 31 years, Carolyn, who continues to provide both professional and personal support in my writing. Thanks also to my daughters, Wendi and Caycee, who constantly live with “the book” and have shown extreme patience with me as I work to meet writing deadlines.

—Ken Black

Acknowledgments

About the Author

Ken Black is currently Professor of Decision Sciences in the School of Business and Public Administration at the University of Houston—Clear Lake. Born in Cambridge, Massachusetts and raised in Missouri, he earned a Bachelor's degree in mathematics from Graceland College, a Master's degree in math education from the University of Texas at El Paso, a Ph.D. in business administration in management science, and a Ph.D. in educational research from the University of North Texas.

Since joining the faculty in 1979, Professor Black has taught all levels of statistics courses, forecasting, management science, market research, and production/operations management. He has published fifteen journal articles and over twenty professional papers as well as two textbooks, *Business Statistics: An Introductory Course* and *Business Statistics: Contemporary Decision Making*. Black has consulted for many different companies including Aetna, City of Houston, NYLCare, AT&T, Johnson Space Center, Southwest Information Resources, Connect Corporation, and Eagle Engineering.

Ken Black and his wife Carolyn have two daughters, Caycee and Wendi. His hobbies include playing the guitar, reading, coaching girls' softball, and participating in Master's track and field as a long jumper and a triple jumper.

10 Statistical Inferences about Two Populations | 335

- X 10.1 Hypothesis Testing and Confidence Intervals about the Difference in Two Means: Large Samples or Variances Known, Independent Samples, 336
Hypothesis Testing, 338
Confidence Intervals, 341
Using the Computer to Test Hypotheses and Construct Confidence Intervals about the Difference in Two Population Means Using the Z Test, 343

- X 10.2 Hypothesis Testing and Confidence Intervals about the Difference in Two Means: Small Independent Samples and Population Variances Unknown, 346
Hypothesis Testing, 346
Using the Computer to Test Hypotheses and Construct Confidence Intervals about the Difference in Two Population Means Using the t Test, 349

FORMULA CHANGES

Confidence Intervals, 351

Statistics in Business Today | 353

- 10.3 Statistical Inferences for Two Related Populations, 355

Hypothesis Testing, 356

Using the Computer to Make Statistical Inferences about Two Related Populations, 358

Confidence Intervals, 360

- 10.4 Statistical Inferences about Two Proportions, 364

Hypothesis Testing, 365

Confidence Intervals, 369

Using the Computer to Analyze the Difference in Two Proportions, 370

- 10.5 Testing Hypotheses about Two Population Variances, 372

Using the Computer to Test Hypotheses about Two Population Variances, 375

Summary, 379

Key Terms, 379

Formulas, 379

Ethical Considerations, 381

Supplementary Problems, 382

Analyzing the Databases, 386

Case: Seitz Corporation: Producing Quality Gear-Driven and Linear-Motion Products, 387

Using the Computer, 388

11 Analysis of Variance and Design of Experiments | 391

- 11.1 Introduction to Design of Experiments, 392

- X 11.2 The Completely Randomized Design (One-Way ANOVA), 394

One-Way Analysis of Variance, 395

Reading the F Distribution Table, 399

Using the Computer for One-Way ANOVA, 399

Comparison of F and t Values, 401

- 11.3 Multiple Comparison Tests, 406

Tukey's Honestly Significant Difference (HSD) Test: The Case of Equal Sample Sizes, 407

Using the Computer to Do Multiple

Comparisons, 408

Tukey-Kramer Procedure: The Case of Unequal Sample Sizes, 411

Statistics in Business Today | 413

- X 11.4 The Randomized Block Design, 414

Using the Computer to Analyze Randomized Block Designs, 419

- 11.5 A Factorial Design (Two-Way ANOVA), 426

Advantages of the Factorial Design, 426

Factorial Designs with Two Treatments, 427

Applications, 427

Statistically Testing the Factorial Design, 428

Interaction, 430

Using a Computer to Do a Two-Way ANOVA, 434

Summary, 444

Key Terms, 445

Formulas, 445
 Ethical Considerations, 446
 Supplementary Problems, 447
 Analyzing the Databases, 451
 Case: ProLight: A Bumpy Path to a Bright Future, 451
 Using the Computer, 453

12 Simple Regression and Correlation Analysis | 455

- X 12.1 Introduction to Simple Regression Analysis, 456
Scatter Plots, 457
- X 12.2 Determining the Equation of the Regression Line, 458
- 12.3 Residual Analysis, 465
Using Residuals to Test the Assumptions of the Regression Model, 467
Using the Computer for Residual Analysis, 468
- 12.4 Standard Error of the Estimate, 472
- 12.5 Coefficient of Determination, 475
- 12.6 Hypothesis Tests for the Slope of the Regression Model and Testing the Overall Model, 478
Testing the Slope, 478
Testing the Overall Model, 481
- 12.7 Estimation, 483
Confidence Intervals to Estimate the Conditional Mean of $Y: \mu_{Y|X}$, 483
Prediction Intervals to Estimate a Single Value of Y , 484
- 12.8 Interpreting Computer Output, 487
- 12.9 Measures of Association, 489
Correlation, 489
Relationship between r and r^2 , 491
 Statistics in Business Today | 492
Covariance, 493

Summary, 495
 Key Terms, 496
 Formulas, 496
 Ethical Considerations, 498
 Supplementary Problems, 498
 Analyzing the Databases, 502
 Case: Delta Wire Uses Training as a Weapon, 503
 Using the Computer, 505

13 Multiple Regression Analysis and Model Building 507

- 13.1 The Multiple Regression Model, 508

Multiple Regression Model with Two Independent Variables (First-Order), 509
Determining the Multiple Regression Equation, 510
A Multiple Regression Model, 511

- 13.2 Evaluating the Multiple Regression Model, 516
Testing the Overall Model, 516
Significance Tests of the Regression Coefficients, 517
Residuals, SSE, and Standard Error of the Estimate, 518
Coefficient of Multiple Determination (R^2), 520
Adjusted R^2 , 521
A Reexamination of the Multiple Regression MINITAB Output, 522
- 13.3 Indicator (Dummy) Variables, 527
- 13.4 More Complex Regression Models, 533
Polynomial Regression, 534
 Statistics in Business Today | 536
Tukey's Ladder of Transformations, 537
Regression Models with Interaction, 539
Model Transformation, 541
- 13.5 Model-Building: Search Procedures, 547
Search Procedures, 549
- 13.6 Multicollinearity, 558
- 13.7 Using Regression to Solve ANOVA Problems, 560

Summary, 563
 Key Terms, 564
 Formulas, 565
 Ethical Considerations, 566
 Supplementary Problems, 566
 Analyzing the Databases, 570
 Case: Virginia Semiconductor, 570
 Using the Computer, 572

14 Index Numbers | 575

- 14.1 Simple Index Numbers and Unweighted Aggregate Price Indexes, 576
Unweighted Aggregate Price Index Numbers, 578
- 14.2 Weighted Aggregate Price Index Numbers, 582
Laspeyres Price Index, 583
Paasche Price Index, 584
Fisher's Ideal Price Index, 586
- 14.3 Other Important Indexes, 588
Quantity Indexes, 588
Consumer Price Index, 590

Producer Price Index, 591
Dow Jones Indexes, 592
 Statistics in Business Today | 593
Other Indexes, 594
Base Period, 594

Summary, 594

Key Terms, 595

Formulas, 595

Ethical Considerations, 596

Supplementary Problems, 596

Analyzing the Databases, 598

Case: J. R. Clarkson Company, 598

15 Forecasting and Time Series | 601

15.1 The Measurement of Forecasting Error, 602

Error, 602

Mean Error (ME), 603

Mean Absolute Deviation (MAD), 603

Mean Square Error (MSE), 604

Mean Percentage Error (MPE), 604

Mean Absolute Percentage Error (MAPE), 605

15.2 Using Regression for Trend Analysis, 606

Time-Series Data, 606

Determining Trend by Using Regression (No Seasonal Effects Present), 607

15.3 Time Series: Decomposition, 614

Seasonal Effects, 615

Statistics in Business Today | 622

Trend Effects, 624

Cyclical Effects, 627

Forecasting by Using Decomposition, 630

Using the Computer to Do Decomposition, 631

15.4 Introduction to Time-Series Forecasting

Techniques, 635

Naive Forecasting Models, 635

Averaging Models, 636

Exponential Smoothing, 641

Advanced Exponential Smoothing, 645

15.5 Autocorrelation and Autogression, 646

Autocorrelation, 646

Ways to Overcome the Autocorrelation Problem, 650

Autoregression, 651

Summary, 654

Key Terms, 655

Ethical Considerations, 656

Supplementary Problems, 657

Analyzing the Databases, 661

Case: DeBourgh Manufacturing Company, 662

Using the Computer, 665

16 Chi-Square and Other Nonparametric Statistics | 669

16.1 Chi-Square Goodness-of-Fit Test, 670

Testing a Population Proportion by Using the Chi-Square Goodness-of-Fit Test as an Alternative Technique to the Z Test, 676

16.2 Contingency Analysis: Chi-Square Test of Independence, 680

16.3 Runs Test, 688

Small-Sample Runs Test, 688

Large-Sample Runs Test, 690

16.4 Mann-Whitney U Test, 692

Large-Sample Case, 695

16.5 Wilcoxon Matched-Pairs Signed Rank Test, 701

Small-Sample Case ($n \leq 15$), 701

Large-Scale Case ($n > 15$), 702

16.6 Kruskal-Wallis Test, 708

16.7 Friedman Test, 713

16.8 Spearman's Rank Correlation, 719

Statistics in Business Today | 721

Summary, 724

Key Terms, 725

Formulas, 725

Ethical Considerations, 726

Supplementary Problems, 727

Analyzing the Databases, 733

Case: Alphonix, 733

Using the Computer, 734

17 Statistical Quality Control | 737

X 17.1 Introduction to Quality Control, 738

What Is Quality Control?, 739

Total Quality Management, 739

Some Important Quality Concepts, 741

Statistics in Business Today | 744

X 17.2 Process Analysis, 745

Flowcharts, 745

Pareto Analysis, 746

Cause-and-Effect (Fishbone) Diagrams, 748

Control Charts, 749

+ 17.3 Control Charts, 750

Variation, 750

Types of Control Charts, 751

	<i>Interpreting Control Charts, 761</i>		Statistics in Business Today 792
17.4	Acceptance Sampling, 767	18.3	Decision Making under Risk, 795
