PREFACE

This book is designed for those interested in learning the fundamentals of corporate finance from both a business and legal point of view. In particular, it is targeted towards lawyers without a finance background who find themselves engaged in transactional work. It is also designed as a study guide for law students who are taking a corporate finance or related course in law school.

Corporate finance is unique in that it is an amalgam of substantive disciplines. Those with even a tangential familiarity with it are likely aware of the crucial role that mathematics and accounting play. Indeed, it is the math and accounting aspects of a corporate finance course that frequently frighten law students away from taking it. Accordingly, Part I makes a serious attempt to explain these concepts in a straight-forward, plain English manner.

Corporate finance, however, is much more than math and accounting, as Parts II through IV make clear. Under the umbrella of corporate finance falls a whole host of other disciplines. Especially important is economics, particularly macroeconomics. Changes in fiscal and monetary policy at the national level directly impact economic growth and the interest rate environment, while indirectly affecting corporate growth and earnings. Corporations attempt to navigate the economic landscape and the concomitant risk it carries by engaging in various risk reduction strategies, especially the use of derivative instruments.

The law also plays a large role in corporate finance. Securities laws, both Federal and state, regulate, influence and guide companies raising capital through the sale of their common stock, preferred stock and debt securities. Corporate law, particularly Delaware corporate law, also affects the ability of companies to raise capital due to its strong influence on internal corporate governance and control. Finally, the law of mergers and acquisitions plays a significant role as companies increase or decrease their size through mergers, acquisitions and divestitures.

While this book is entitled Corporate Finance, much of what it contains applies to business entities other than corporations. All businesses, regardless of their form, need capital to survive and grow. While the capital structure of these other entities may differ from that of the corporation, the ways in which they pursue and, ultimately, raise capital are similar.

I endeavor to put the most current and accurate information available in this book. Accordingly, I welcome any suggestions or comments that could improve on its contents. Please feel free to contact me with those suggestions or comments.

Many provided significant assistance in the preparation of this book. I would like to thank my colleagues at New York Law School, in general, and Rick Matasar and Grace Lee, in particular. In addition, a great deal of thanks go to Larry Cunningham, Ron Sarubbi, Brent Friedman, David Dami and Steve Howard for their substantive comments and support. Lastly, I tip my hat to my “cocky and funny” research assistants, Stephen Ginsberg, Sagi Goldberg, Jon Macy, Danny Rehns, Heather Rutman, Rich
