Preface

Research on the application of fibre-reinforced polymer (FRP) as reinforcement for concrete structures appeared in as early as the 1960s. However, it was not until the late 1980s that such research has escalated, leading to field applications. The interest in non-metallic reinforcement was fuelled by the corrosion problem associated with steel reinforcement that surfaced around the world at that time, and the downturn of the aerospace industry, where fibre-reinforced polymers have been widely used due to its high specific strength and modulus, and other superior characteristics.

I was fortunate to spend my sabbatical with Professor Naaman at the University of Michigan, USA, during the Fall and Winter of 1991 and with Professor Okamura at the University of Tokyo, Japan, during Spring and Summer of 1992. The former introduced to me this new material that has since fascinated many in the research community and construction industry. In Tokyo, in particular, I was overwhelmed by the mountains of research that were embarked by universities, public institutions and private companies on the development and application of FRP rods as reinforcement for concrete structures: There were round bars, flat bars, square bars, braided bars, sanded bars, strands, grids and links, and even three-dimensional reinforcement. Several applications in footbridges, foundation beams, tunnel linings, and floating structures suddenly mushroomed all over Japan and the rest of the world. That probably constituted the first era in the application of FRP reinforcement in concrete structures.

The FRPRCS Symposia Series was initiated in 1993, and subsequently held every two years in the continents of America, Europe and Asia, on a rotational basis. The previous symposia were held in Vancouver, Canada (1993), Ghent, Belgium (1995), Sapporo, Japan (1997), Baltimore, USA (1999), and Cambridge, UK (2001). This year marks the 10th anniversary of the FRPRCS Symposia Series, and the Department of Civil Engineering at the National University of Singapore is honored to host the 6th International Symposium on FRP Reinforcement for Concrete Structures (FRPRCS-6) in Singapore.

The planning and preparation works for FRPRCS-6 in effect began almost six years ago in 1997 when I was asked in Sapporo, to be the second Asian host for the FRPRCS International Symposium. At that time, there was still little awareness of the material known as FRP reinforcement in Asia outside Japan, and if any, the interests were centered mainly on externally bonded FRP systems rather than FRP reinforcing rods. The Kobe earthquake in 1995 has brought about rapidly increasing interests in the use of FRP systems in structural rehabilitation, and that marked the beginning of the second era in FRP applications in concrete structures.

To promote awareness and interests in the development and application of FRP reinforcement in Singapore and the region, the Fibre-Reinforced Society (Singapore) was formed in September 2002 and has since been a co-organizer of this Symposium.

The FRPRCS-6 International Symposium will signify the beginning of the third era, in which one could witness global interests in FRP reinforcement, as well as the use of FRP reinforcements as structural shapes, and in masonry and steel structures. This set of proceedings contains a total of 140 papers from 26 countries, in two volumes. Each technical paper had been reviewed and selected for presentation by at least two members of the International Scientific Committee, to whom I would like to express my gratitude.

Volume 1 of the proceedings contains four invited keynote papers and 63 technical papers dealing with: (i) FRP Materials and Properties; (ii) Bond Behaviour; (iii) Externally Bonded Reinforcement (EBR) for Flexure, Shear and Confinement; and (iv) FRP Structural Shapes. The topics covered in Volume 2 are: (v) Durability and Maintenance; (vi) Sustained and Fatigue Loads; (vii) Prestressed FRP Reinforcement and Tendons; (viii) Structural Strengthening; (ix) Applications in Masonry and Steel Structures; (x) Field Applications and Case Studies; and (xi) Codes and Standards. Seventy-three papers are included in Volume 2.

The FRPRCS-6 International Symposium also witnessed the formation of the International Steering Committee, which comprises the chairmen of the current and previous FRPRCS Symposia. The main purpose of this Committee is to chart the future directions for the Symposia Series. It has appointed a three-man taskforce to determine the Best Paper (Research), Best Paper (Application) and Honorable Mention Awards, which were first introduced at FRPRCS-6. The three gentlemen in the taskforce were Professor C.W. Dolan from USA, Professor F.S.

Rostásy from Germany, and Professor H. Okamura from Japan. All of them are well known in the areas of FRP reinforcement and structural concrete.

The organization of the Symposium would not have been possible without the generous contributions from the sponsors, who are degussa-MBT (S) Pte Ltd, Fyfe Asia Pte Ltd, Mapei Far East Pte Ltd, Sika (S) Pte Ltd, Lee Foundation (Singapore) and Defence Science & Technology Agency. I would also like to express my sincere thanks to the American Concrete Institute, USA, Institution of Engineers, Singapore, Japan Concrete Institute, Japan, and The Concrete Society, UK, for supporting the event.

Last, but not least, I would like to acknowledge the help of my colleagues, in particular, Balendra, Mansur and Maalej, and the Secretariat, comprising Christine, Siti and Sarimah, who have devoted many hours in getting the Symposium organized.

VOLUME 1

KEYNOTE PAPERS

FRP Reinforcements in Structural Concrete: Assessment, Progress, and Prospects	
A.E. Naaman	3
Progress and Prospects of FRP Reinforcements: Survey of Expert Opinions	
A.E. Naaman	25
Durability Design of GFRP Rods for Concrete Reinforcement	
T. Uomoto	37
New Types of Continuous Fiber Reinforcements for Concrete Members	
T. Ueda	51

FRP MATERIALS AND PROPERTIES

Performance of Thermoplastic Fiber Reinforced Polymer Rebars	
A.B. Mehrabi, C.A. Ligozio, A.F. Elremaily and D.R. Vanderpool	79
Experimental Study on Poisson's Ratio for FRP Tendons	
M. Tanaka, M. Khin, T. Harada and K. Venkataramana	89
Stress-Strain Model for FRP-Confined Concrete for Design Applications	
L. Lam and J.G. Teng	99

Accelerated Techniques to Predict the Stress-Rupture Behaviour of Aramid Fibres (<i>Best Paper – Research</i>)	
K.G.N.C. Alwis and C.J. Burgoyne	111

BOND BEHAVIOUR

Bond Characteristics of Various FRP Strengthening Techniques	
S.H. Rizkalla and T. Hassan	123
Bond Strength between Fiber-Reinforced Polymer Laminates and Concrete	
T. Kanakubo, T. Furuta and H. Fukuyama	133
Local Bond Stress-Slip Relations for FRP Sheets-Concrete Interfaces (<i>Best Paper – Research</i>)	
J.G. Dai and T. Ueda	143
Bilinear Stress - Slip Bond Model: Theoretical Background and Significance	
T. Ulaga, T. Vogel and U. Meier	153
Non Linear Bond-Slip Law for FRP-Concrete Interface	
M. Savoia, B. Ferracuti and C. Mazzoti	163
Experimental Analysis of Interface between CFRP and Concrete using Cylindrical Specimens	
A.C. Dos Santos, T.N. Bittencourt and R. Gettu	173
FRP Adhesion in Uncracked and Cracked Concrete Zones	
G. Monti, M. Renzelli and P. Luciani	183
Neural Network Prediction of Plate End Debonding in FRP-Plated RC Beams	
S.T. Smith, J.G. Teng and M. Lu	193
Bond Behaviour of CFRP Strips Glued into Slits	
M. Blaschko	205

EXTERNALLY BONDED REINFORCEMENT FOR FLEXURE

Load Capacity of Concrete Beams Strengthened with External FRP Sheets	
Z.J. Wu and J.M. Davies	217
Reinforcing Effects of CFRP and AFRP Sheets with Respect to Flexural Behaviour of RC Beams	
O. Joh, Z. Wang and H. Ibe	227
Flexural Behaviour of RC Beams Externally Reinforced with Carbon Fiber Sheets	
Y. Takahashi and Y. Sato	237
Strength and Failure Mechanism of RC T-Beams Strengthened with CFRP Plates	
K. Lee and R. Al-Mahaidi	247
Effect of Beam Size on Interfacial Shear Stresses and Failure Mode of FRP-Bonded Beams	
K.S. Leong and M. Maalej	257
Debonding Failure of RC Structural Members Strengthened with FRP Laminates	
G. Camata, E. Spacone and V. Saouma	267
Effect of End Wrapping on Peeling Behaviour of FRP-Strengthened Beams	
P. Pornpongsaroj and A. Pimanmas	277
An Experimental Study on Debond-Control of AFRP for Flexurally Strengthened RC Beams	
S. Sawada, N. Kishi, H. Mikami and Y. Kurihashi	287
Tests on RC T-Beams Strengthened in Flexure with a Glued and Bolted CFRP Laminate	
A. Nurchi, S. Matthys, L. Taerwe, M. Scarpa and J. Janssens	297

Parametric Studies of RC Beams Strengthened in Flexure with Externally Bonded FRP	
S. Limkatanyu, H. Thomsen, E. Spacone and G. Camata	307
Concrete Cover Failure or Tooth Type Failure in RC Beams Strengthened with FRP Laminates	
M.M. Lopez and A.E. Naaman	317
Influence of Material Properties of FRPs on Strength of Flexural Strengthened RC Beams	
G.F. Zhang, N. Kishi and H. Mikami	327
Ductility of Reinforced Concrete Beams Strengthened with CFRP Strips and Fabric	
M. Valcuende, J. Benlloch and C.J. Parra	337
A Review of Ductility Determination of FRP Strengthened Flexural RC Elements	
D.B. Tann, P. Davies and R. Delpak	347
A Semi-Empirical Approach for the Prediction of Deflections of FRP Strengthened RC Slabs	
D.B. Tann	357
Crack Widths in RC Beams Externally Bonded with CFRP Sheets	
Y. Zhang, H. Toutanji and P. Balaguru	367
Numerical Simulations for Strengthened Structures with Hybrid Fiber Sheets	
H. Niu and Z. Wu	377
Fibre-Section FE of FRP-Strengthened RC Beam in Flexure, Shear and Confinement	
G. Monti and M. Barbato	387
Interaction between Internal Bars and External FRP Reinforcement in RC Members	
G. Zehetmaier and K. Zilch	397

Strengthening of RC Two-Way Slabs with Composite Materials O. Limam, G. Foret and A. Ehrlacher	407
Evaluation of Externally Bonded CFRP Systems for the Strengthening of RC Slabs K.Y. Tan, J.G. Tumialan and A. Nanni	417
Flexural Strengthening of Two-Way Slabs Using FRPs H. Marzouk, U.A. Ebead and K.W. Neale	427
Tensile Properties of Concrete in FRP Strengthened Two-Way Slabs H. Marzouk, U.A. Ebead and K.W. Neale	437

EXTERNALLY BONDED REINFORCEMENT FOR SHEAR

Shear Critical RC Beams Strengthened with CFRP Straps G. Kesse and J. M. Lees	447
Effective Shear Strengthening of Concrete Beams using FRP Sheets with Bonded Anchorage B.B. Adhikary, H. Mutsuyoshi and M. Ashraf	457
Behaviour of Concrete Structures Strengthened in Shear with CFRP A. Carolin and B. Täljsten	467
Strengthening of RC T Beams in Shear with Carbon Sheet Laminates (CFRP) G.S. Melo, A.S. Araújo and Y. Nagato	477
Strength Analysis of Sheared Beams Retrofitted with Strengthening Materials Z. H. Xiong and M.N.S. Hadi	487
Shear Performance with Externally Bonded Carbon Fibre Fabrics A. Li, C. Diagana, Y. Delmas and B. Gedalia	497

Evaluation of Shear Capacity of RC Columns Strengthened by Continuous Fiber

T. Furuta, T. Kanakubo and H. Fukuyama 507

Shear Design Equations for FRP RC Beams

M. Guadagnini, K. Pilakoutas and P. Waldron 517

Strengthening of Corrosion-Damaged RC Columns with FRP

S.N. Bousias, T.C. Triantafillou, M.N. Fardis,
L.A. Spathis and B. O'Regan 527

Shear Strengthening of Concrete Bridge Decks using FRP Bar

P. Valerio and T.J. Ibell 539

EXTERNALLY BONDED REINFORCEMENT FOR CONFINEMENT

Stress-Strain Relationship for FRP-Confined Concrete Cylinders

G. Wu, Z. Lu and Z. Wu 551

Stress-Strain Relationship for FRP-Confined Concrete Prisms

G. Wu, Z. Wu and Z. Lu 561

Concrete Cylinders Confined by CFRP Sheets Subjected to Cyclic Axial Compressive Load

T. Rousakis, C.S. You, L. De Lorenzis, V. Tamužs and
R. Tepfers 571

Concrete Cylinders Confined by Prestressed CFRP Filament Winding under Axial Compressive Load

T. Rousakis, C.S. You, L. De Lorenzis, V. Tamužs and
R. Tepfers 581

Concrete Confined with Fiber Reinforced Cement Based Thin Sheet Composites

H.C. Wu and J. Teng 591

Hoop Rupture Strains of FRP Jackets in FRP-Confined Concrete L. Lam and J.G. Teng	601
Externally Confined High Strength Concrete Columns under Eccentric Loading J. Li, M. Mouldsdale and M.S.N. Hadi	613
Creep Performance of CFRP Confined Concrete Cylinders M. Thériault, M.-A. Pelletier, K. Khayat and G. Al Chami	623
Development/Splice Strength of Steel Bars in Concrete Confined with CFRP Sheets M.H. Harajli and B.S. Hamad	633
Lateral Prestressing of RC Columns with FRP Jackets A.A. Mortazavi, K. Pilakoutas and M.A. Ciupala	643
Confinement of RC Rectangular Columns Using GFRP A. Prota, G. Manfredi and E. Cosenza	653
Behaviour of RC Columns Retrofitted by Fibre Reinforced Polymers under Cyclic Loads H. Shaheen, T. Rakib, Y. Hashem, I. Shaaban and A. Abdelrahman	663
Photogrammetrically Measured Deformations of FRP Wrapped Low Strength Concrete A. Ilki, V. Koc, B. Ergun, M.O. Altan and N. Kumbasar	673

FRP STRUCTURAL SHAPES

Rectangular FRP Tubes Filled with Concrete for Beam and Column Applications A.Z. Fam, D.A. Schnierch and S.H. Rizkalla	685
Flexural Behaviour of GFRP-Polymer Concrete Hybrid Structural Systems M.C.S. Ribeiro, A.J.M. Ferreira and A.T. Marques	695

A New Concept for an FRP Panelized Rapid Deployment Shelter	
N.M. Bradford and R. Sen	705
Experimental Investigation of Pultruded FRP Section Combined with Concrete Slab	
A. Biddah	715

VOLUME TWO

DURABILITY AND MAINTENANCE

Research on Strength and Durability of GFRP Rods for Prestressed Concrete Tendons	
M. Sugiyama and T. Uomoto	727
Durability of Concrete Beams Reinforced with GFRP Bars under Different Environmental and Loading Conditions	
K. Laoubi, E.F. El-Salakawy, B. Benmokrane and M. Pigeon	737
Environmental Effects on RC Beams Strengthened with Near Surface Mounted FRP Rods	
F. Micelli, A. La Tegola and J.J. Myers	749
Synergistic Hydrothermal Effects on Durability of E-Glass Vinylester Composites	
W. Chu and V.M. Karbhari	759
Durability of GFRP Composites under Tropical Climate
