| SES | socio-economic status | TMS | Transcranial Magnetic Stimulation |
| SFB | Sengui Form Board | TRN | Thalamic Reticular Nucleus |
| SLD | Specific Learning Disability | TTX | Tetrodotoxin |
| SOA | Stimulus Onset Asynchrony | UWT | Unfamiliar Words Test |
| SPEFT | Story-Pictorial Embedded Figures Test | VCT | Visual Closure Test |
| SPM | Standard Progressive Matrices | VSCCs | Voltage-sensitive Calcium Channels |
| | | WM | Working Memory |

Preface

In the last four decades, cognitive science has established itself as a truly interdisciplinary science. Cognitive science is an intellectual enterprise that studies cognition and seeks to answer many fundamental and long-standing questions about the nature of mind and mental processes. The central assumption for cognitive science can be phrased as follows: 'The human mind is a complex system that receives, stores, retrieves, transforms and transmits information'. Here the mind is conceived as an information processor. Herbert Simon, a pioneer in cognitive science and artificial intelligence defines cognitive science as 'recognition of a fundamental set of common concerns shared by the disciplines of psychology, computer science, linguistics, economics, epistemology and social sciences generally'. Cognitive science is the multidisciplinary scientific study of cognition and its role in intelligent agency. It examines what cognition is, what it does, and how it works.

An important way in which cognitive science approaches the mind is to view the scientific study of the mind in terms of three levels of analysis proposed by David Marr for understanding cognition, namely, computational, algorithmic and implementational levels. While there have been disagreements about the three levels of analysis and the way they are related to each other, these levels of analysis provide a framework for understanding and studying cognition. Palmer and Kinchi discuss three assumptions of information processing approach: informational description, recursive decomposition and physical embodiment. These assumptions enable us to discuss mental states as informational events, specify an informational event at one level in terms of component informational events at a lower level, and use the concept of representations (states of the system that carry information) and processes (changes in states/representations).

Cognitive science employs qualitatively different research tools such as formal methods used to develop computational proofs, the programming techniques of computer science, the experimental practices of psychology, and a variety of paradigms (single-cell studies, lesions, neuroimaging) of neuroscience. Given the current advances, it is expected that cognitive science will become even more inter-disciplinary.

Cognitive science is not yet a flourishing discipline in India. Under the Universities Grants Commission (UGC) Scheme of Universities with Potential for Excellence, the University of Allahabad was selected for developing 'Behavioural and Cognitive Sciences' as an Island of Excellence. As a follow-up, the University established the Centre for Behavioural and Cognitive Sciences (CBCS) in 2002, for providing education of merit and distinction in line with new developments and challenges, as a constructive opportunity for advancement of scientific knowledge through basic and applied research and teaching as well as outreach programmes. The objectives of the academic programme are to provide

comprehensive training and prepare the students for a professional/research/academic career, to develop a richer understanding of mental processes and neural mechanisms underlying cognition using behavioural, computational and neurophysiological techniques. All aspects of behavioural and cognitive sciences are explored to understand the nature of cognitive and information processing system as well as to explore possible applications for the individual and the society. The faculty and students at the Centre are involved in research programmes pertaining to vision, attention, perception, linguistics, cognitive neuroscience, consciousness, cognitive disorders, cognitive modelling and human computer interaction. There is a strong emphasis on research projects and exposure to various theoretical and experimental studies in cognitive science. The Centre and the University provide an ideal environment for study and research in cognitive science.

The International Conference on Cognitive Science was held on 16–18 December 2004 at the CBCS. The conference was the first of its kind in focussing on all aspects of cognitive science. The mission of the conference was to explore the truly inter-disciplinary nature of cognitive science and create awareness of cognitive science among the interested students and researchers. The conference served as the meeting point for scientists from interfacing disciplines like psychology, neuroscience, computer science, linguistics and philosophy. The conference elucidated current research on significant areas interfacing cognitive science such as language processing, culture and cognition, perception, cognitive disorders, consciousness, computational neuroscience, memory, social cognition and so on. The technical programme comprised six keynote lectures, 59 oral presentations and 22 poster presentations. The keynote lectures were presented by six prominent experts in cognitive science like Prof. Aravind K. Joshi, University of Pennsylvania, USA, Prof. Jyotsna Vaid, Texas A and M University, USA, Prof. Ype Poortinga, University of Tilburg, Netherlands, Prof. Avi Chaudhuri, McGill University, Canada, and Prof. John W. Berry, Queen's University, Canada. In addition to faculty members from various Indian universities and abroad, research scholars from various Indian and foreign universities attended the conference.

Based on the initial submissions of papers and abstracts for the conference, the editors requested the authors to submit full papers for the volume. All the editors reviewed the papers and 27 contributions were selected for publication in the current volume. Some contributions had to be excluded due to the stringent review process. The contributors are senior leading as well as young talented cognitive scientists from various countries including the USA, Canada, the UK, Germany, the Netherlands, Belgium, Switzerland, Denmark, Australia, New Zealand, Lebanon, Japan and India. The volume contains research articles addressing the challenges faced in cognitive science requiring cross-linking of different interfacing disciplines like psychology, neuroscience, computer science, linguistics and philosophy.

The recent findings from cognitive science presented in the volume will serve as a useful resource for scientists working in the area of cognitive science. The volume represents a

good sample of the current trends in major sub-disciplines in cognitive science. The book contains six sections: (1) Cognitive processes (2) Cognitive neuroscience (3) Computational modelling (4) Culture and cognition (5) Cognitive development and intervention, and (6) Consciousness. The first section contains eight chapters and focuses on the study of various cognitive processes ranging from vision and social cognition. The second section on cognitive neuroscience contains three chapters on cognitive neuroscience of vision and language as well as brain-behavioural asymmetry. The third section on computational modelling has four chapters spanning computational neuroscience and computational linguistics. The fourth section focuses on culture and cognition. This section has seven chapters discussing methodological and theoretical issues as well as related set of cross-cultural studies on spatial development. The fifth section on cognitive development includes four chapters discussing abnormal cognitive development and cognitive rehabilitation. The final section appropriately concludes with a chapter by Prof. K.R. Rao on consciousness with an Indian perspective.

The editors would like to acknowledge the efforts of many people who have contributed so much to the conference and preparation of this volume. Our colleague Dr Bhoomika R. Kar helped tremendously in organizing the conference and without her dedication the conference would not have been such a success. We would like to thank all the CBCS staff and students as well as research scholars from the Department of Psychology who worked very hard for the conference. The editors thank SAGE Publications for bringing out this volume.

Contents

| | |
|------------------------------|-------------|
| <i>List of Tables</i> | <i>ix</i> |
| <i>List of Figures</i> | <i>xi</i> |
| <i>List of Abbreviations</i> | <i>xv</i> |
| <i>Preface</i> | <i>xvii</i> |

Section I Cognitive Processes

| | |
|---|-----------|
| CHAPTER 1 | |
| Hierarchical Organization of Complex Visuo-Motor Sequences | 7 |
| <i>V.S. Chandrasekhar Pammi, S. Bapi Raju, Ahmed, K.P. Miyapuram and Kenji Doya</i> | |
| CHAPTER 2 | |
| Orienting Attention and Cued Sustained Attention | 18 |
| <i>Indramani L. Singh, Pamela M. Greenwood and Raja Parasuraman</i> | |
| CHAPTER 3 | |
| Why Does Foveal Bias Decrease in the Presence of Additional Element? | 31 |
| <i>Muhammad Kamal Uddin, Takahiro Kawabe and Sachio Nakamizo</i> | |
| CHAPTER 4 | |
| New Associative Learning in Amnesia | 43 |
| <i>Suparna Rajaram and H. Branch Coslett</i> | |
| CHAPTER 5 | |
| The Coordinated Processing of Scene and Utterance: Evidence from Eye-Tracking in Depicted Events | 50 |
| <i>Pia Knoeferle and Matthew W. Crocker</i> | |
| CHAPTER 6 | |
| Script Indices | 62 |
| <i>Richard Sproat and Prakash Padakannaya</i> | |
| CHAPTER 7 | |
| How Do We Parse Compound Words? | 71 |
| <i>Gary Libben</i> | |

CHAPTER 8

Other Minds: Social Cognition in Wild Bonnet Macaques

Anindya Sinha

87

Section II Cognitive Neuroscience

CHAPTER 9

A Survey of Molecular Mapping as Applied to Studies of the Visual System

Avi Chaudhuri

111

CHAPTER 10

Neural Substrates of Language Processing in Bilinguals: Imagi(ni)ng the Possibilities

Jyotsna Vaid

120

CHAPTER 11

Side Bias in Human Behaviour

Manas K. Mandal, Hari S. Asthana and Ramakrishna Biswal

135

Section III Computational Modelling

CHAPTER 12

Non-linear Dynamical Analysis of Point Neuron Models and Signal Propagation along Axon

Deepak Mishra, Abhishek Yadav, Sudipta Ray and Prem Kumar Kalra

159

CHAPTER 13

Smoke Without Fire: What Do Virtual Experiments in Cognitive Science Really Tell Us?

Peter R. Krebs

177

CHAPTER 14

Complex Primitives and Their Linguistic and Processing Relevance

Aravind K. Joshi

188

CHAPTER 15

Dissecting the Frog: Computational Approaches to Humour Perception

Narayanan Srinivasan and Vani Pariyadath

197

Section IV Culture and Cognition

| | |
|---|-----|
| CHAPTER 16 | |
| Sources of Evidence and Levels of Interpretation in Culture-and-Cognition Research | 221 |
| <i>Ype H. Poortinga</i> | |
| CHAPTER 17 | |
| Spatial Language and Concept Development: Theoretical Background and Overview | 240 |
| <i>R.C. Mishra and Pierre R. Dasen</i> | |
| CHAPTER 18 | |
| Spatial Encoding: A Comparison of Sanskrit- and Hindi-Medium Schools | 253 |
| <i>Aparna Vajpayee, Pierre R. Dasen and R.C. Mishra</i> | |
| CHAPTER 19 | |
| A Cross-Cultural Comparison of Spatial Language and Encoding in Bali and Geneva | 264 |
| <i>Pierre R. Dasen and Jürg Wassmann</i> | |
| CHAPTER 20 | |
| Culture, Language, Spatial Frames of Reference and Hemispheric Dominance | 277 |
| <i>R.C. Mishra and Pierre R. Dasen</i> | |
| CHAPTER 21 | |
| Cultural Adaptations and Cognitive Processes of Tribal Children in Chotanagpur | 287 |
| <i>R.C. Mishra and John W. Berry</i> | |
| CHAPTER 22 | |
| An Eco-cultural Perspective on Cognitive Competence | 300 |
| <i>John W. Berry</i> | |

Section V Cognitive Development and Intervention

| | |
|--|-----|
| CHAPTER 23 | |
| Experimental Approaches to Specific Disabilities in Learning to Read: The Case of Symmetry Generalization in Developmental Dyslexia | 319 |
| <i>Thomas Lachmann</i> | |

| | |
|--|------------|
| CHAPTER 24 | |
| Cognitive Profiles of Children with Dyslexia | 341 |
| <i>Bhoomika R. Kar and Nishi Tripathi</i> | |
| CHAPTER 25 | |
| Emergence of Social Play and Numeracy: A Related Development with Young At-Risk Students? | 355 |
| <i>Geerdina M. van der Aalsvoort, Arjette M. Karemaker and Mieke P. Ketelaars</i> | |
| CHAPTER 26 | |
| Cognitive Stimulation of Rural School Children in India: An Evaluative Study | 369 |
| <i>Malavika Kapur</i> | |
| Section VI Consciousness | |
| CHAPTER 27 | |
| Taxonomy of Consciousness | 383 |
| <i>K. Ramakrishna Rao</i> | |
| <i>About the Editors and Contributors</i> | 424 |
| <i>Subject Index</i> | 434 |
| <i>Name Index</i> | 447 |

List of Tables

| | | |
|------|---|-----|
| 1.1 | The percentage change of SR for the four sessions | 11 |
| 1.2 | The key-press RTs for the four sessions | 15 |
| 11.1 | Incidence of left handedness across countries | 143 |
| 11.2 | Theoretical notions behind the incidence of left handedness | 145 |
| 15.1 | A comparative study of theories of humour perception | 208 |
| 16.1 | An overview of four levels of psychometric equivalence of data and three levels of inclusiveness of interpretations | 225 |
| 16.2 | Extent to which validity of cross-cultural differences in score levels is open to empirical control (ruling out alternative explanations) | 230 |
| 17.1 | Spatial frames of reference in developmental psychology and in linguistics | 241 |
| 18.1 | Sample characteristics | 256 |
| 18.2 | One-way ANOVA comparing Hindi-medium (H) and Sanskrit schools (S) | 261 |
| 19.1 | Sample characteristics of studies in Bali 2002 and 1994 | 265 |
| 19.2 | Pearson correlation coefficients between language, encoding and background variables | 271 |
| 19.3 | Pearson correlations between acculturation, language and encoding | 272 |
| 20.1 | Sample characteristics | 279 |
| 20.2 | Pearson correlations between language, encoding and FDI | 282 |
| 20.3 | Partial correlations controlling for age, gender, preschooling, grade, years of schooling and school type | 282 |
| 20.4 | ANOVA outcomes on brain lateralization measures, G and E encoding groups | 283 |
| 21.1 | Mean score of groups on the measures of cultural dimensions | 293 |
| 21.2 | Mean score of groups on differentiation measures | 294 |
| 21.3 | Mean score of groups on contextualization measures | 295 |
| 21.4 | Mean score of groups on integration measure | 296 |
| 21.5 | Factor analysis outcomes on core cognitive measures | 297 |
| 25.1 | Design of the longitudinal study | 359 |

| | | |
|------|---|-----|
| 25.2 | The means and standard deviations of the instruments used to select the subjects listed per school and per research condition | 363 |
| 25.3 | The means and standard deviations of the ECERS ratings per category and the SES per school and per research condition | 364 |
| 25.4 | The means and standard deviations on number sense, counting and ordering per school and per research condition | 365 |

List of Figures

| | | |
|------|---|----|
| 1.1 | The 2×12 task procedure | 10 |
| 1.2 | The block-wise combination graph | 12 |
| 1.3 | Block-wise improvements of SR for all the three experiments | 13 |
| 1.4 | Session-wise improvements of SR for all the three experiments | 13 |
| 1.5 | Block-wise data of key-press RTs for all the three experiments | 15 |
| 1.6 | Session-wise data of key-press RTs for all the three experiments | 15 |
| 2.1 | Percentage of correct detection as function of two-hour time period | 19 |
| 2.2 | Perceptual sensitivity as function of event rate and cue validity | 23 |
| 2.3 | Sensitivity index scores as a function of cue validity | 24 |
| 2.4 | Sensitivity index scores as function of cue validity and block in low event rate | 25 |
| 2.5 | Sensitivity index scores as function of cue validity and block in high event rate | 25 |
| 2.6 | Mean sensitivity index scores under 300 and 450 SOA | 26 |
| 3.1 | Schematic representation of the experimental protocol | 34 |
| 3.2 | Mean displacements plotted as a function of 5 experimental conditions | 36 |
| 3.3 | Mean displacements plotted as a function of 5 experimental conditions | 39 |
| 5.1 | The Jackendovian architecture of the language system | 52 |
| 5.2 | A sketch of the competitive-integra | 53 |
| 5.3 | Example image from Experiment 1 | 56 |
| 5.4 | Example item from Knoeferle and Crocker (2004) | 57 |
| 6.1 | Catenation operators, after Sproat 2000 | 63 |
| 6.2 | Schematic illustration of script layout catenators | 63 |
| 6.3 | Illustration of the layout catenators in Chinese | 63 |
| 6.4 | Full and diacritic forms for Devanagari vowels, classified by catenator inherent to the diacritic forms | 64 |
| 6.5 | Forms for diacritic Kannada vowels, classified by catenator | 64 |
| 6.6 | <i>Anusvara</i> in Devanagari (left) and Kannada for the word /pensil/ | 66 |
| 6.7 | Layout details for /pensil/ in Devanagari | 67 |
| 6.8 | Layout details for /eešvaikya/ in Kannada | 67 |
| 6.9 | Layout details for /lakšmiiša/ in Kannada | 67 |
| 6.10 | Feature vector slots | 68 |
| 6.11 | Feature vector slots for Devanagari /peMsil/ | 68 |

| | | |
|-------|---|-----|
| 6.12 | Feature vector slots for Kannada /eešvaikya/ | 68 |
| 6.13 | Feature vector slots for Kannada /lakšmiiša/ | 69 |
| 7.1 | A simplistic view of compound parsing | 75 |
| 7.2 | A more adequate view of compound parsing (The APPLE II model) | 76 |
| 7.3 | Left branching and right branching structures for English triconstituent compounds | 78 |
| 7.4 | The parsing of a left-branching triconstituent word in German | 80 |
| 7.5 | The parsing of a right-branching triconstituent word in German | 81 |
| 7.6 | A schematic representation for the parsing of ambiguous triconstituent compounds containing the morphemes 1, 2, and 3 | 83 |
| 8.1 | Distribution of deceptive acts across different categories of tactical deception exhibited by Troops G I, G II and B I | 97 |
| 8.2 | Correlation between the number of deceptive acts and the number of categories of tactical deception in which they were performed by males in the three study troops | 99 |
| 12.1 | Time response and phase portraits for HH model | 161 |
| 12.2 | Time responses and phase portraits for FitzHugh–Nagumo neuron model at (a) $I = 0.5$ (b) $I = 1.5$ (c) $I = 2.35$ | 163 |
| 12.3 | Nullclines for FitzHugh–Nagumo neuron model | 164 |
| 12.4 | Bifurcation diagram for FitzHugh–Nagumo neuron model | 164 |
| 12.5 | Time response and phase portrait for Wilson–Cowan model (a) $\rho_y = -2$ (b) $\rho_y = -3$ (c) $\rho_y = -9.5$ | 166 |
| 12.6 | Bifurcation diagram for Wilson–Cowan model with ρ_y as the bifurcation parameter | 167 |
| 12.7 | Time response and phase portrait for cortical neuron model at (a) $I = -3$ (b) $I = 1.5$ and (c) $I = 6$ | 168 |
| 12.8 | Bifurcation diagram for cortical neuron model | 169 |
| 12.9 | Response of Morris–Lecar model when current is injected only at first compartment | 172 |
| 12.10 | Response of Morris–Lecar model when current injection varies inversely with fourth root of axon length | 173 |
| 12.11 | Response of Morris–Lecar model when current injection varies inversely with square root of axon length | 173 |
| 12.12 | Response of Morris–Lecar model when current injection varies inversely with square root of axon length | 174 |
| 14.1 | Domain of locality of a context-free grammar | 189 |
| 14.2 | Substitution | 189 |
| 14.3 | Adjoining | 190 |

| | | |
|------|---|-----|
| 14.4 | An LTAG example | 191 |
| 14.5 | An LTAG derivation | 191 |
| 14.6 | An LTAG derived tree | 192 |
| 14.7 | An LTAG derivation tree | 192 |
| 14.8 | Two supertags for with | 194 |
| 17.1 | Results of previous studies (Bali, India, Nepal), absolute encoding for Animals task (3 animals only) and Steve's Maze | 246 |
| 18.1 | Animals: number of items with completely geocentric encoding, out of seven items, using four animals | 259 |
| 18.2 | Chips: number of items with completely geocentric encoding, out of seven items | 260 |
| 18.3 | Steve's Maze: number of items with completely geocentric encoding, out of five items | 260 |
| 19.1 | Mean items with absolute encoding for four animals (seven items) in three samples of 2002 study | 268 |
| 19.2 | Absolute encoding on Animals and Chips, in Bali (2002 study) and in Geneva | 274 |
| 22.1 | Eco-cultural framework linking ecology, cultural adaptation and individual behaviour | 304 |
| 22.2 | Cultural transmission: Linkages between contexts and outcomes | 305 |
| 23.1 | Letter and shape stimuli used in different blocks in the experiment by Brendler and Lachmann (2001) | 328 |
| 23.2 | Relationship between 'b-d' reversals in word reading and errors in the same-different task with physical instruction and lexical material | 329 |
| 23.3 | Mean RT (ms) as a function of angle of rotation for dyslexics and controls | 332 |
| 23.4 | Accuracy rate (%) as a function of angle of rotation in the dyslexic and normal reader group | 333 |
| 24.1 | Errors in reading English | 346 |
| 24.2 | Errors in reading Hindi | 346 |
| 24.3 | Writing errors—English | 348 |
| 24.4 | Writing errors—Hindi | 349 |
| 24.5 | Mean standard scores on PASS scales of CAS | 350 |
| 24.6 | Mean performance of children with dyslexia on subtests of CAS | 350 |
| 24.7 | Cognitive processes in decoding | 351 |
| 27.1 | Consciousness as awareness | 384 |
| 27.2 | States of awareness | 384 |
