# THE COMPUTER AFTER ME

Awareness and  
Self-Awareness in Autonomic Systems

# Preface

When I was much younger, my ambition was to be a science fiction writer. Fate, in whatever preposterous guises it could find, dealt me a hand in which I ended up as an academic, spending a lot of my time writing European project proposals. Some of these get funded, and become facts (of a sort); most of them don't, and remain, well, fictions. Live the dream, as they say.

However, the EU Future and Emerging Technology (FET) Unit warrants considerable approbation for its continued success in defining research programmes that could, with appropriately tinted spectacles, be reasonably construed as science fiction – but then funding research projects under that programme which turn the ostensible fictions into hard scientific fact.

One of these targeted programmes, or Proactive Initiatives, addressed *Awareness and Self-Awareness in Autonomic Systems*, ICT for optimising system performance based not so much on the designer's conceptions, but on the system's own perceptions (awareness) of its performance with respect to the dynamic environment in which it is presumed to be embedded.

This immediately raises a number of scientific challenges, not least because the notion of 'awareness' or the state of being 'self-aware' are hardly well defined or understood by those disciplines that have addressed them, let alone as new concepts for ICT.

Recognising that meeting such challenges therefore requires a coordinated, inter-disciplinary effort, FET also funded a Coordination Action (in our case, imaginatively entitled AWARE), whose remit is, *inter alia*, to foster cooperation and communication between the projects in the programme. Moreover, it has a responsibility to be outward-looking, to engage with both the scientific community and with EU citizens, in order to explain the motivation for the programme, and to explore the consequences if the targeted outcomes of the research programme were to be met.

This is the aim of the current volume: to map out the space of research in computational awareness, computational self-awareness, and autonomic systems; and to explore the possible social, political, cultural, legal and environmental ramifications.

On a more general note, the idea of the conscious and/or self-conscious machine has intrigued scientists and writers alike. However, this book is not about futurologist interpretations of Moore's Law and (wild?) projections about cyborgs, singularities and the revolution of the robots, however much fun that might be (and frankly the micro-chip in my recalcitrant toaster seems to have already made a start). It is, on the other hand, a realistic assessment of the state of the art in computational awareness and, in particular, a serious consideration of its potential for benefit and disruption. No technology is intrinsically 'good' or 'bad', it is only the use to which it is put – or programmed – or perhaps self-programmed – that can be judged in such a way. It is incumbent on responsible scientists and technologists to consider the social implications of their science and technology. It is all well enough for mountaineers to justify their actions by "because it is there", but not good enough for scientists to justify themselves by "because I can", and then shrug their shoulders at being taken by surprise by the Law of Unintended Consequences. Again.

*Jeremy Pitt*  
London, 2014

# Acknowledgments

## Authors' Acknowledgments

Marco Aiello, Roberto Baldoni, Alexander Lazovik and Massimo Mecella: This work has been partially supported by EU project Smart Homes for All, contract FP7-22433.

Kirstie Bellman: Thanks to Christopher as always for our intellectual partnership, as well as pragmatic help on L<sup>A</sup>T<sub>E</sub>X for this chapter. In memory of Joseph Goguen and Donald O. Walter, always present in spirit.

Aikaterini Bourazeri, Pablo Almajano, Inmaculada Rodriguez and Maite Lopez-Sanchez: This work has been partially supported by Autonomic Power System (EP/I031650/1) UK EPSRC project, and EVE (TIN2009-14702-C02-01/02), AT (CONSOLIDER CSD2007-0022), TIN2011-24220 and TIN2012-38876-C02-02 Spanish research projects.

Giacomo Cabri and Franco Zambonelli: This work has been partially supported by the EU-FP7-FET Proactive projects SAPERE (contract no. 256874), and ASCENS (contract no. 257414). Thanks to Nicola Capodieci for the contribution about the Artificial Immune System.

Giovanna Di Marzo Serugendo, Matteo Risoldi and Mohammad Soleymayni: Thanks to the members of the TSC (The Social Computer) Swiss NCCR Consortium, who all contributed to developing the TSC concept.

Regina Frei and Giovann di Marzo Sergugendo: Regina Frei was supported by the Swiss National Science Foundation with a Fellowship for Advanced Researchers.

Petar Goulev and Joan Farrer: Many thanks to the participants of the Barrier Solutions project, kindly support by The Santander Business Innovation Fund managed by the University of Brighton, UK.

Justin W. Hart and Brian Scassellati: This chapter is based upon work

supported by grants from Microsoft Research and the National Science Foundation under contracts no. 0835767, no. 0968538, and no. 1117801.

Matthias Hözl and Martin Wirsing: This work has been partially supported by the EU-FP7-FET Proactive project ASCENS (257414).

Peter R. Lewis: This research has been partially funded by the EU-FP7-FET project EPiCS (257906). Thanks to members of the EPiCS project team, especially Xin Yao, Arjun Chandra, Rami Bahsoon and Funmilade Faniyi for many thought provoking discussions.

Alan Winfield: is very grateful to the organisers of and fellow participants at the AWARE project workshops and slide factory for deeply interesting and formative discussions on awareness.

## Editor's Acknowledgements

After the previous volume (*This Pervasive Day*, Imperial College Press, 2012), I remain hugely grateful to the Senior Commissioning Editor of Imperial College Press, Lance Sucharov, and my Editor, Tasha D'Cruz, for giving me a second go. Though quite how someone so concerned with the precise meaning of words puts up with my rather more flexible interpretation of 'commitment', 'deadline' and indeed the legal niceties of a signed contract I do not know, but Tasha does and is ever a patient source of sound advice, guidance and encouragement.

I have benefited enormously from the wonderful collegiality of all my collaborators on the Aware Project: Ben Paechter, Emma Hart, Callum Egan (who never misses an opportunity to make me look good), Ingi Helgason, Gus Eiben, Mark Hoogendorn, Giacomo Cabri (who never knowingly under-invites me anywhere), Franco Zambonelli and Jennifer Willies. Thanks everyone; but a special thanks to Jennifer, none of this would be possible without her remarkable wisdom, sheer enthusiasm and indefatigable energy; and certainly not the proof that  $\text{compensation} = \pi R(g\bar{g})^2$ .

Naturally, I am indebted to all the chapter authors, not least for their various fascinating contributions, but also for approaching what is (for scientists and engineers) a fairly unconventional commission in such an open, collaborative and constructive way. I highly appreciate all their efforts in reviewing others' and revising their own chapters, and am deeply grateful for the comments of Alan Winfield and especially Ada Diaconescu on the Introduction. For me at least, it has been most interesting and enjoyable: thanks to you all.

# Contents

<i>Preface</i>	v
<i>Acknowledgments</i>	vii
1. Introduction: The Computer After Me	1
<i>Jeremy Pitt</i>	
1.1 Introduction . . . . .	1
1.2 Computer Awareness in Science Fiction . . . . .	4
1.3 Computer Awareness and Self-Awareness . . . . .	6
1.3.1 How many senses does a computer have? . . . . .	6
1.3.2 Does a computer know that it is a computer? . . . . .	9
1.3.3 Does metal know when it is weakening? . . . . .	11
1.4 Why Does Computer Awareness Matter? . . . . .	13
1.5 Chapter Overviews . . . . .	16
1.6 Summary and Conclusions . . . . .	17
 <b>What Comes After the ‘Disappeared Computer’?</b>	 <b>19</b>
2. Towards Self-Aware and Self-Composing Services	21
<i>Giacomo Cabri and Franco Zambonelli</i>	
2.1 Introduction . . . . .	21
2.2 Service Composition and Self-Awareness . . . . .	22
2.2.1 Horizontal composition . . . . .	23
2.2.2 Vertical composition . . . . .	23
2.2.3 Towards self-aware services . . . . .	24

2.3	Approaches to Self-Aware Service Composition . . . . .	25
2.3.1	Nature-inspired self-composition approaches . . .	25
2.3.2	Composition and re-composition of service collaboration patterns . . . . .	28
2.4	Research Challenges . . . . .	33
2.4.1	Challenges for nature-inspired self-composition . .	33
2.4.2	Challenges for dynamic adaptation of system collaboration patterns . . . . .	34
2.5	The Impact . . . . .	35
2.6	Summary and Conclusions . . . . .	36
3.	Issues in Engineering Self-Aware and Self-Expressive Ensembles	37
	<i>Matthias Hözl and Martin Wirsing</i>	
3.1	Introduction . . . . .	37
3.2	Classifying Awareness and Self-Expression . . . . .	39
3.2.1	Elements of the awareness mechanism . . . . .	39
3.2.2	A white-box definition of awareness . . . . .	40
3.2.3	Self-expression . . . . .	44
3.2.4	A black-box definition of awareness . . . . .	45
3.3	Awareness Engineering . . . . .	46
3.4	Socio-Technical Issues . . . . .	47
3.4.1	Privacy, ownership and control of data . . . . .	47
3.4.2	Discrimination and responsibility . . . . .	50
3.4.3	Failure modes . . . . .	52
3.5	Summary and Conclusions . . . . .	54
4.	Social Awareness in Technical Systems	55
	<i>Christian Müller-Schloer, Mathias Pacher, Yvonne Bernard and Lukas Klejnowski</i>	
4.1	Introduction . . . . .	55
4.2	Self-Governing Institutions . . . . .	58
4.3	Technical Agent Societies . . . . .	60
4.3.1	Trusted communities . . . . .	60
4.3.2	The social agent . . . . .	61
4.3.3	From implicit to explicit trusted communities . .	65
4.4	No Society without Rules . . . . .	66
4.5	Outlook . . . . .	69

5.	Self-Healing Software	71
	<i>Regina Frei and Giovanna Di Marzo Serugendo</i>	
5.1	Introduction . . . . .	71
5.2	Self-Awareness as an Aspect of Self-Healing . . . . .	72
5.3	A Working Taxonomy for Software Self-Healing . . . . .	73
5.3.1	Failures, errors and faults . . . . .	75
5.4	Approaches to Software Self-Healing . . . . .	76
5.4.1	Self-healing at code level . . . . .	77
5.4.2	Self-healing through self-organisation . . . . .	79
5.4.3	Self-healing based on policies . . . . .	79
5.4.4	Architectures for self-healing . . . . .	80
5.4.5	Model-based solutions for self-healing . . . . .	81
5.5	Discussion and Conclusion . . . . .	82
6.	Bring It On, Complexity! Present and Future of Self-Organising Middle-Out Abstraction	83
	<i>Sebastian von Mammen and Jan-Philipp Steghöfer</i>	
6.1	The Great Complexity Challenge . . . . .	83
6.2	Self-Organising Middle-Out Abstraction . . . . .	84
6.3	Optimising Graphics, Physics and Artificial Intelligence . . . . .	85
6.4	Emergence and Hierarchies in a Natural System . . . . .	87
