Bacterial cellular metabolic systems

Woodhead Publishing Series in Biomedicine

- 1 Practical leadership for biopharmaceutical executives
J. Y. Chin
- 2 Outsourcing biopharma R&D to India
P. R. Chowdhury
- 3 Matlab® in bioscience and biotechnology
L. Burstein
- 4 Allergens and respiratory pollutants
Edited by M. A. Williams
- 5 Concepts and techniques in genomics and proteomics
N. Saraswathy and P. Ramalingam
- 6 An introduction to pharmaceutical sciences
J. Roy
- 7 Patently innovative: How pharmaceutical firms use emerging patent law to extend monopolies on blockbuster drugs
R. A. Bouchard
- 8 Therapeutic protein drug products: Practical approaches to formulation in the laboratory, manufacturing and the clinic
Edited by B. K. Meyer
- 9 A biotech manager's handbook: A practical guide
Edited by M. O'Neill and M. H. Hopkins
- 10 Clinical research in Asia: Opportunities and challenges
U. Sahoo
- 11 Therapeutic antibody engineering: Current and future advances driving the strongest growth area in the pharmaceutical industry
W. R. Strohl and L. M. Strohl
- 12 Commercialising the stem cell sciences
O. Harvey
- 13 Biobanks: Patents or open science?
A. De Robbio
- 14 Human papillomavirus infections: From the laboratory to clinical practice
F. Cobo
- 15 Annotating new genes: From *in silico* to validations by experiments
S. Uchida
- 16 Open-source software in life science research: Practical solutions in the pharmaceutical industry and beyond
Edited by L. Harland and M. Forster

- 17 Nanoparticulate drug delivery: A perspective on the transition from laboratory to market
V. Patravale, P. Dandekar and R. Jain
- 18 Bacterial cellular metabolic systems: Metabolic regulation of a cell system with ¹³C-metabolic flux analysis
K. Shimizu
- 19 Contract research and manufacturing services (CRAMS) in India
M. Antani, G. Gokhale and K. Baxi
- 20 Bioinformatics for biomedical science and clinical applications
K-H. Liang
- 21 Deterministic versus stochastic modelling in biochemistry and systems biology
P. Lecca, I. Laurenzi and F. Jordan
- 22 Protein folding *in silico*: Protein folding versus protein structure prediction
I. Roterman-Konieczna
- 23 Computer-aided vaccine design
T. J. Chuan and S. Ranganathan
- 24 An introduction to biotechnology
W. T. Godbey
- 25 RNA interference: Therapeutic developments
T. Novobrantseva, P. Ge and G. Hinkle
- 26 Patent litigation in the pharmaceutical and biotechnology industries
G. Morgan
- 27 Clinical research in paediatric psychopharmacology: A practical guide
P. Auby
- 28 The application of SPC in the pharmaceutical and biotechnology industries
T. Cochran
- 29 Ultrafiltration for bioprocessing
H. Lutz
- 30 Therapeutic risk management of medicines
A. K. Banerjee and S. Mayall
- 31 21st century quality management and good management practices: Value added compliance for the pharmaceutical and biotechnology industry
S. Williams
- 32 Sterility, sterilisation and sterility assurance for pharmaceuticals
T. Sandle
- 33 CAPA in the pharmaceutical and biotech industries
J. Rodriguez
- 34 Process validation for the production of biopharmaceuticals: Principles and best practice.
A. R. Newcombe and P. Thillaivinayagalingam
- 35 Clinical trial management: An overview
U. Sahoo and D. Sawant
- 36 Impact of regulation on drug development
H. Guenter Hennings
- 37 Lean biomanufacturing
N. J. Smart
- 38 Marine enzymes for biocatalysis
Edited by A. Trincone
- 39 Ocular transporters and receptors in the eye: Their role in drug delivery
A. K. Mitra
- 40 Stem cell bioprocessing: For cellular therapy, diagnostics and drug development
T. G. Fernandes, M. M. Diogo and J. M. S. Cabral

- 42 Fed-batch fermentation: A practical guide to scalable recombinant protein production in *Escherichia coli*
G. G. Moulton and T. Vedvick
- 43 The funding of biopharmaceutical research and development
D. R. Williams
- 44 Formulation tools for pharmaceutical development
Edited by J. E. A. Diaz
- 45 Drug-biomembrane interaction studies: The application of calorimetric techniques
R. Pignatello
- 46 Orphan drugs: Understanding the rare drugs market
E. Hernberg-Ståhl
- 47 Nanoparticle-based approaches to targeting drugs for severe diseases
J. L. A. Mediano
- 48 Successful biopharmaceutical operations
C. Driscoll
- 49 Electroporation-based therapies for cancer
Edited by R. Sundarajan
- 50 Transporters in drug discovery and development
Y. Lai
- 51 The life-cycle of pharmaceuticals in the environment
R. Braund and B. Peake
- 52 Computer-aided applications in pharmaceutical technology
Edited by J. Petrović
- 53 From plant genomics to plant biotechnology
Edited by P. Poltronieri, N. Burbulis and C. Fogher
- 54 Bioprocess engineering: An introductory engineering and life science approach
K. G. Clarke
- 55 Quality assurance problem solving and training strategies for success in the pharmaceutical and life science industries
G. Welty
- 56 Nanomedicine: Prognostic and curative approaches to cancer
K. Scarberry
- 57 Gene therapy: Potential applications of nanotechnology
S. Nimesh
- 58 Controlled drug delivery: The role of self-assembling multi-task excipients
M. Mateescu
- 59 In silico protein design
C. M. Frenz
- 60 Bioinformatics for computer science: Foundations in modern biology
K. Revett
- 61 Gene expression analysis in the RNA world
J. Q. Clement
- 62 Computational methods for finding inferential bases in molecular genetics
Q.-N. Tran
- 63 NMR metabolomics in cancer research
M. Čuperlović-Culf
- 64 Virtual worlds for medical education, training and care delivery
K. Kahol

About the author

Following a BS and an MS in Chemical Engineering at Nagoya University, Japan, and a PhD in Chemical Engineering at Northwestern University, USA, Kazuyuki Shimizu started his career in 1981 as a research associate at Nagoya University, Japan, and was promoted to associate professor in 1990. He then moved to the Kyushu Institute of Technology, Department of Bioscience and Bioinformatics as a professor in 1991. In 2000, he became an adjunct professor at the Institute of Advanced Biosciences (IAB), Keio University, Japan. Kazuyuki was appointed an associate member of the Science Council of Japan from 2006 to 2011.

He has been working on such topics as:

1. Metabolic flux analysis based on the ^{13}C labeling technique (^{13}C -MFA), where metabolic flux distribution is located on top of omics data, and the rigorous metabolic fluxes obtained by this method are used to analyze metabolic regulation of cells;
2. Integration of the different levels of hierarchical omics information, such as transcriptomics, proteomics, metabolomics, and fluxomics data, where it is critical to understand cell metabolism as a whole cell system; and
3. Systems biology, modeling of the main metabolic pathways of a cell using enzymatic reactions together with metabolic regulation based on global regulator (transcription factor), where metabolic pathway genes relationships may lead to the development of virtual microbes.

He recognizes the importance of uncovering the metabolic regulation mechanism of a cell system, based on both experimental (wet) and computational (dry) approaches. He has also organized a UK-Japan collaboration project on microbial systems biology toward developing virtual microbes.

Figures

1.1	Main metabolic pathways	2
1.2	Metabolic pathways of glycolysis	4
1.3	Structure of ATP	5
1.4	Structure of NADH and NADPH	5
1.5	(a) Pentose phosphate pathway, and (b) the change in carbon numbers	11
1.6	Entner Doudoroff pathway	15
1.7	PDH and TCA cycle	16
1.8	Acetate producing pathways	21
1.9	Anaplerotic pathways	22
1.10	Gluconeogenetic pathways	24
1.11	Modularity of respiratory chains	26
1.12	Proton translocating values per electron in the respiratory chain	26
1.13	Schematic illustration for the electron transfer and proton translocation	28
1.14	Chemical structure of quinones	28
1.15	Pathway of UQ biosynthesis in <i>E. coli</i>	30
1.16	Anaerobic pathways	31
1.17	Nitrate respiration	33
1.18	Calvin-Benson cycle	35
1.19	Amino acid synthesis from their precursors	37
1.20	Alanine synthesis from PYR	38
1.21	Valine, leusine, and isoleusine biosynthesis	39
1.22	Glutamate and glutamine synthesis as well as aspartate and asparagine synthesis	39
1.23	Proline biosynthesis from glutamate	40
1.24	Arginine, ornithine, and citrulline synthesis pathway	40
1.25	Lysine, threonine, and methionine biosynthesis	41
1.26	Aromatic amino acid synthesis pathways	43
1.27	Several control schemes for aromatic amino acid biosynthesis	44

1.28 Serine, glycine, and cystein synthesis pathways	44
1.29 Histidine synthesis pathways	45
1.30 Nucleic acids synthesis pathways	46
1.31 β oxidation and biosynthesis of fatty acid	47
1.32 Phosphotransferase system (PTS)	49
1.33 Fructose metabolism	50
1.34 Xylose metabolism	51
1.35 ATP balance for aerobic and anaerobic conditions	52
2.1 Batch cultivations of <i>E. coli</i> K12 using different DO levels and different carbon sources	58
2.2 2-DE gel maps of the total lysate of <i>E. coli</i> cells	63
2.3 The relative expression levels of <i>E. coli</i> K-12 proteins of central metabolic pathways under different conditions based on 2DE results	66
2.4 Comparison of the logarithmic protein expression ratios based on 2DE and the corresponding enzyme activity ratios	77
2.5 Growth curves of <i>E. coli</i> BW25113, which was grown in minimal media containing 10 g glucose/l as the sole carbon source	78
2.6 Relative gene expression of different global regulators and the metabolic pathway genes known to be regulated by those global regulators during different phases of growth	80
2.7 Concentration of different intracellular metabolites	83
2.8 Total and relative expression of iso-genes of <i>E. coli</i> metabolic pathways	84
2.9 Acetate metabolism	86
3.1 Overall metabolic regulation scheme	96
3.2 Outer and inner membrane and periplasm	98
3.3 Inducer exclusion and the activation of adenylate cyclase in the glucose-lactose system	101
3.4 The multiple regulations by Mlc and cAMP-Crp	103
3.5 Batch cultivation of (a) <i>E. coli</i> BW25113 and (b) its <i>cra</i> mutant	105
3.6 Comparison of enzyme activities of <i>cra</i> mutant as compared to the wild type (BW25113)	110
3.7 The effect of dilution rate on the gene transcript levels	113
3.8 Comparison of gene transcript levels of the wild type, <i>crp</i> knockout mutant, and <i>crp</i> ⁺ mutant	116

3.9	Glucose PTS and fructose PTS	118
3.10	Central metabolic pathways and NH_3 -assimilation pathways	121
3.11	Ammonia assimilation under different NH_4^+ concentration	122
3.12	Effect of C/N ratio on the fermentation characteristics for the continuous culture at the dilution rate of 0.2 h^{-1}	123
3.13	Schematic illustration of the interaction among several metabolic regulations. Comparison of the transcriptional mRNA levels of the wild type <i>E.coli</i> genes cultivated at 100% (C/N = 1.68), 40% (C/N = 4.21), 20% (C/N = 8.42) and 10% (C/N = 1.68) N^- concentration: (a) global regulatory, (b) N^- regulatory, (c) metabolic pathway, (d) respiratory chain	124
3.14	The interaction between nitrogen regulation and catabolite regulation	126
3.15	Overall mechanism of nitrogen assimilation in <i>E. coli</i> under C-limited (N-rich) and N-limited conditions	129
3.16	Molecular mechanism of phosphate regulation	131
3.17	Comparison of the transcript levels of the wild type <i>E.coli</i> cultivated with different P concentrations of the feed (100%, 55%, 10%)	134
3.18	Schematic illustration of the interaction among several metabolic regulation mechanisms	136
3.19	Comparison of some gene expressions for parent <i>E. coli</i> BW25113 and <i>arcB</i> mutant at 4 h of batch cultivation along with the gel picture	141
3.20	Comparison of specific enzyme activities of <i>E. coli</i> BW25113, its <i>arcB</i> and <i>arcA</i> mutant at 4 h of batch cultivation	141
3.21	Comparison of the transcript levels between wild type and <i>fnr</i> mutant under micro-aerobic continuous culture conditions	144
3.22	Comparison of enzymes activities during micro-aerobic batch culture	145
3.23	Metabolic flux distributions of wild type and <i>fnr</i> mutant under micro-aerobic conditions	147
3.24	Comparison of gene expressions	151
3.25	Specific enzyme activities in cell extracts	152
3.26	The role of glutamate decarboxylase for acid resistance	154
3.27	Acid resistance mechanism under acidic conditions	157

3.28	Effect of temperature up-shift on gene expressions in <i>E. coli</i> BW25113 under aerobic continuous culture at the dilution rate of 0.2 h^{-1}	160
3.29	Effect of heat shock on gene and protein expressions and the fermentation characteristics	163
3.30	Metabolic pathways showing levels of enzymes (or proteins) and intracellular metabolite concentrations in the <i>fadR</i> mutant <i>E. coli</i> relative to those in the parent at the exponential phase grown in glucose minimal medium under aerobic conditions	171
3.31	Different kinds of sigma factor in <i>E. coli</i>	176
3.32	Schematic diagram on the function of sigma factor as a transcription factor	176
3.33	Various levels of σ^s regulation are differentially affected by various stress conditions	177
3.34	Growth curves of: (a) <i>E. coli</i> BW25113 (parent strain); and (b) <i>E. coli</i> JWK 2711 (<i>rpoS</i> mutant)	179
3.35	Intracellular metabolite concentrations of <i>E. coli</i> BW25113 (parent strain) and <i>E. coli</i> JWK 2711 (<i>rpoS</i> mutant)	184
4.1	Central reaction network for microalgae metabolism	221
4.2	Cultivation results of <i>C. pyrenoidosa</i> under autotrophic conditions	228
4.3	Cultivation results of <i>C. pyrenoidosa</i> under mixotrophic conditions	229
4.4	Cultivation results of <i>C. pyrenoidosa</i> under cyclic light-autotrophic/dark-heterotrophic conditions	230
4.5	Metabolic flux distribution of <i>Chlorella</i> cells	233
4.6	Energy conversion efficiency between the energy supplied to the culture, the energy absorbed by the cells, and the high free energy stored in ATP	238
4.7	Theoretical thermodynamic efficiency of ATP formation from the absorbed energy ($Y_{\text{ATP}}/AE_{\text{max}}$) as a linear function of the fraction of the absorbed light energy of the total	239
4.8	Conversion efficiency of: (a) total energy; and (b) light energy during the various growth phases of the mixotrophic cultivation	241
4.9	Energy conversion efficiency between the three energy forms during the first light/dark cycle of the cyclic autotrophic/heterotrophic cultivation	242

4.10	General metabolic pathway of <i>E. coli</i> under oxygen-limited conditions	248
4.11	Factors influencing lactate producing flux	252
4.12	Factors influencing flux through Pta–Ack pathway	255
4.13	The effect of Pyk activity on: (a) Pyk flux; and (b) glycolytic flux	257
5.1	Simple examples of flux calculation	267
5.2	IDV and MAV	268
5.3	Schematic illustration of the data NMR and MS, compared to isotopomer distribution	270
5.4	The fate of labeled carbons for when using: (a) glucose; and (b) acetate or pyruvate, as a carbon source	276
5.5	Transformation of IDVs into MDVs and FMDVs for a C ₃ molecule	285
5.6	Schematic illustration of net flux and exchange flux	286
5.7	The relationship between the precursor and amino acid	290
5.8	Derivatization to generate <i>M-57*</i> and <i>M-159*</i>	291
5.9	Net flux distribution in acetate metabolism of <i>E. coli</i> K12 in chemostat cultures at D of 0.11 and 0.22 h ⁻¹	295
5.10	Net flux distribution in glucose metabolism of <i>E. coli</i> K12 in chemostat cultures at D of 0.11 and 0.22 h ⁻¹	296
5.11	¹³ C isotopomer patterns and NMR multiple spectral patterns	300
5.12	The fate of carbons of precursor metabolites to amino acids	301
5.13	Carbon position and f values	302
5.14	¹³ C– ¹³ C scalar coupling	309
5.15	Metabolic flux distribution of the wild type and <i>pckA</i> mutant	311
5.16	Predicted dependencies of the flux through Pck	316
5.17	Bioreaction network of <i>E. coli</i> central carbon metabolism	320
5.18	¹³ C– ¹³ C scalar coupling multiplets observed for aspartate from glucose-limited chemostat cultures of <i>E. coli</i> W3110 and the <i>pgi</i> mutant	323
5.19	¹³ C– ¹³ C scalar coupling multiplets observed for C–4 of glucose from ammonia-limited chemostat cultures of <i>E. coli</i> W3110 and the <i>pgi</i> mutant	326
5.20	¹³ C– ¹³ C scalar coupling multiplets observed for Asp- α from ammonia-limited chemostat cultures of <i>E. coli</i> W3110 and the <i>zwf</i> mutant	330
