# Theory of Aerospace Propulsion

# Preface

This textbook derives from notes that were developed and assembled over many years of teaching propulsion and high-speed airplane design courses at the Polytechnic Institute of Brooklyn, as well as courses in propulsion and aerospace vehicle design at the University of Florida. The material presented is intended as an aid in studying the theory and concepts of propulsion and derives from a diversity of sources. The text strives to provide a fundamental approach suitable for courses at the senior undergraduate and first-year master's level. The problems are intended to promote an appreciation for applications of the theory to problems of practical interest.

There is little attempt to provide a specifically historical or motivational background of aerospace propulsion, as it is expected that readers will come to this level of study with a well-developed sense of interest in and appetite for a quantitative involvement in the field. The first chapter immediately introduces the student to the fundamentals of jet propulsion from the standpoint of the ideal quasi-one-dimensional conservation equations. The second chapter delves deeper into the details of these equations in order to arrive at a consistent set of equations that are broadly applicable to various propulsion systems. The third chapter carries out an extensive set of analyses of the operation of a variety of air-breathing engines under conditions of ideal operation to facilitate keeping interest focused on the underlying concepts. The foundation for such an approach is that if an ideal system works poorly, a practical version of it will not work better. The cases studied offer the equivalent of a set of sample problems to aid the reader in understanding the ideal workings of the various engines. The effect of the efficiencies of a real system is discussed at the end of the chapter in a manner that should facilitate repeating the calculation of all the cases with reasonable concern for losses common to practical operation. Chapters 4, 5, and 6 concentrate on the three engine components basic to jet propulsion principles: combustors, nozzles, and inlets. Fundamentals are discussed in some detail and application to actual hardware is shown. Then Chapters 7 and 8 are devoted to the fundamentals and details of the turbomachinery required for the operation of air-breathing jet engines for flight up to and including supersonic speeds, while integration of the various components into a working unit is the subject of Chapter 9. The last chapter concerned with aircraft flight operations is Chapter 10, which covers the operation of propellers and the application of the gas turbine engine to them. Chapters 11 and 12 are concerned with liquid and solid rocket motors, respectively, while Chapter 13 analyzes the nuclear rocket and its possible role in space propulsion. The area of space propulsion is covered in Chapter 14 with attention given to electric propulsion techniques that are of importance in satellite operations and deep space exploration. Finally, Chapter 15 gives a brief overview of the case for high-speed flight and how propulsion plays a major role in making such operations practical. Seven appendices follow dealing with important auxiliary information, including supersonic flows and shock waves; thermodynamic properties of hydrocarbon-air combustion products; the Earth's atmosphere; orbital operations and staging of rockets; principles of safety, reliability, and risk assessment related to propulsion; flight performance of aircraft; and thermodynamic properties of selected chemical species.

I acknowledge the inspiration provided by Professor Antonio Ferri who taught propulsion courses I took as a graduate student at the Polytechnic Institute of Brooklyn many years ago. Appreciation is due to my close colleagues Professor Marian Visich, Jr. of the State University of New York at Stony Brook and Professor Herbert Fox of the New York Institute of Technology for their long-term

cooperation in, criticism of, and support for this book. I also thank the many students who, over the years, provided suggestions and corrections to the class notes that evolved into this book. Final thanks are due to my wife, Anne, for patience and encouragement in this project whose duration and required effort were wildly underestimated.

Preface .....	xvii
---------------	------

<b>CHAPTER 1 Idealized Flow Machines .....</b>	<b>1</b>
1.1 Conservation Equations.....	1
1.1.1 Conservation of mass .....	2
1.1.2 Conservation of momentum .....	3
1.1.3 Conservation of energy.....	3
1.2 Flow Machines with No Heat Addition: The Propeller .....	3
1.2.1 Zero heat addition with $V_e > V_0$ .....	3
1.2.2 Zero heat addition with $V_e < V_0$ .....	4
1.2.3 Zero heat addition with $P = \text{constant} > 0$ .....	4
1.2.4 Propulsive efficiency .....	4
1.3 Flow Machines with $P = 0$ and $Q = \text{Constant}$ : The Turbojet, Ramjet, and Scramjet.....	5
1.3.1 Heat addition, $Q > 0$ .....	5
1.3.2 Constant heat addition, $Q = \text{constant} > 0$ .....	7
1.3.3 Overall efficiency .....	8
1.3.4 Fuel efficiency .....	8
1.4 Flow Machines with $P = 0$ , $Q = \text{Constant}$ , and $A_0 = 0$ : The Rocket .....	11
1.5 The Special Case of Combined Heat and Power: The Turbofan.....	12
1.5.1 Very small bypass ratio, $\beta \ll 1$ , the turbojet.....	15
1.5.2 Very large bypass ratio, $\beta \gg 1$ , the turboprop.....	15
1.5.3 Finite $\beta$ , the turbofan.....	16
1.6 Force Field for Air-Breathing Engines.....	16
1.7 Conditions for Maximum Thrust .....	22
1.8 Example: Jet and Rocket Engine Performance .....	25
1.8.1 Jet engine performance.....	25
1.8.2 Rocket engine performance.....	26
1.9 Nomenclature .....	27
1.9.1 Subscripts .....	28
1.10 Exercises.....	29
Reference .....	34
<b>CHAPTER 2 Quasi-One-Dimensional Flow Equations .....</b>	<b>35</b>
2.1 Introduction .....	35
2.2 Equation of State.....	36
2.3 Speed of Sound .....	36
2.4 Mach Number.....	37
2.5 Conservation of Mass.....	37
2.6 Conservation of Energy.....	40

2.6.1	Thermodynamics of perfect gas mixtures.....	40
2.6.2	Fuel-air mixture .....	41
<b>2.7</b>	Example: Heating Values for Different Fuel–Oxidizer Combinations .....	43
<b>2.8</b>	Conservation of Species .....	44
<b>2.9</b>	Conservation of Momentum .....	45
<b>2.10</b>	Impulse Function.....	46
<b>2.11</b>	Stagnation Pressure .....	46
<b>2.12</b>	Equations of Motion in Standard Form.....	47
<b>2.13</b>	Example: Flow in a Duct with Friction .....	47
<b>2.14</b>	Nomenclature .....	50
2.14.1	Subscripts.....	51
2.14.2	Superscripts.....	51
<b>2.15</b>	Exercises.....	51
	References .....	53
<b>CHAPTER 3</b>	<b>Idealized Cycle Analysis of Jet Propulsion Engines .....</b>	<b>55</b>
<b>3.1</b>	Introduction .....	56
<b>3.2</b>	General Jet Engine Cycle.....	57
<b>3.3</b>	Ideal Jet Engine Cycle Analysis .....	59
<b>3.4</b>	Ideal Turbojet in Maximum Power Take-Off .....	60
3.4.1	Inlet flow, stations 0-2 .....	61
3.4.2	Compressor flow, stations 2-3 .....	62
3.4.3	Combustor flow, stations 3-4.....	62
3.4.4	Turbine flow, stations 4-5 .....	63
3.4.5	Nozzle flow, stations 5-7 .....	64
3.4.6	Turbojet thrust and fuel efficiency in take-off.....	66
3.4.7	Real turbojet engine in take-off .....	67
<b>3.5</b>	Ideal Turbojet in High Subsonic Cruise in the Stratosphere.....	68
3.5.1	Inlet flow, stations 0-2 .....	68
3.5.2	Compressor flow, stations 2-3 .....	69
3.5.3	Combustor flow, stations 3-4.....	69
3.5.4	Turbine flow, stations 4-5 .....	70
3.5.5	Nozzle flow, stations 5-7 .....	70
3.5.6	Turbojet thrust and fuel efficiency in cruise.....	72
3.5.7	Real turbojet engine in subsonic cruise .....	75
<b>3.6</b>	Ideal Turbojet in Supersonic Cruise in the Stratosphere.....	75
3.6.1	Inlet flow, stations 0-2 .....	76
3.6.2	Compressor flow, stations 2-3 .....	76
3.6.3	Combustor flow, stations 3-4.....	76
3.6.4	Turbine flow, stations 4-5 .....	77
3.6.5	Afterburner flow, stations 5-5b.....	77
3.6.6	Nozzle flow, stations 5b-7 .....	80
3.6.7	Turbojet thrust and fuel efficiency in supersonic cruise.....	81
3.6.8	Real turbojet engine in supersonic cruise .....	82

<b>3.7</b>	Ideal Ramjet in High Supersonic Cruise in the Stratosphere .....	83
3.7.1	Inlet flow, stations 0-2,3 .....	84
3.7.2	Combustor flow, stations 2,3-4,5 .....	84
3.7.3	Nozzle flow, stations 4,5-7 .....	85
3.7.4	Ramjet thrust and fuel efficiency in high supersonic cruise .....	85
3.7.5	Real ramjet in high supersonic cruise .....	88
<b>3.8</b>	Ideal Turbofan in Maximum Power Take-Off .....	88
3.8.1	Inlet flow, stations 0-2 .....	89
3.8.2	Compressor flow, stations 2-3 .....	90
3.8.3	Fan flow, stations 2-3F .....	90
3.8.4	Combustor flow, stations 3-4 .....	92
3.8.5	Turbine flow, stations 4-5 .....	92
3.8.6	Nozzle flow, stations 5-7 .....	94
3.8.7	Turbofan thrust and fuel efficiency in take-off .....	94
3.8.8	Real turbofan engine in take-off .....	97
<b>3.9</b>	Ideal Turbofan in High Subsonic Cruise in the Stratosphere .....	99
3.9.1	Inlet flow, stations 0-2 .....	100
3.9.2	Compressor flow, stations 2-3 .....	100
3.9.3	Fan flow, stations 2-3F .....	100
3.9.4	Combustor flow, stations 3-4 .....	101
3.9.5	Turbine flow, stations 4-5 .....	102
3.9.6	Nozzle flow, stations 5-7 .....	102
3.9.7	Turbofan thrust and fuel efficiency in cruise .....	103
3.9.8	Real turbofan in high subsonic cruise .....	107
<b>3.10</b>	Ideal Internal Turbofan in Supersonic Cruise in the Stratosphere .....	109
3.10.1	Inlet flow, stations 0-2 .....	110
3.10.2	Compressor flow, stations 2-3 .....	110
3.10.3	Fan flow, stations 2-5F .....	110
3.10.4	Combustor flow, stations 3-4 .....	111
3.10.5	Turbine flow, stations 4-5 .....	111
3.10.6	Afterburner flow, stations 5-5AB .....	112
3.10.7	Nozzle flow, stations 5AB-7 .....	117
3.10.8	Turbofan thrust and fuel efficiency in supersonic cruise .....	117
3.10.9	Real internal turbofan in supersonic cruise .....	121
<b>3.11</b>	Real Engine Operations .....	121
3.11.1	Inlet operation .....	121
3.11.2	Compressor and fan operation .....	122
3.11.3	Combustor and afterburner operation .....	122
3.11.4	Turbine operations .....	123
3.11.5	Nozzle operations .....	123
<b>3.12</b>	Nomenclature .....	123
3.12.1	Subscripts .....	124
<b>3.13</b>	Exercises .....	124
	References .....	126

<b>CHAPTER 4 Combustion Chambers for Air-Breathing Engines .....</b>	<b>127</b>
4.1 Combustion Chamber Attributes .....	127
4.2 Modeling the Chemical Energy Release .....	128
4.3 Constant Area Combustors .....	129
4.4 Example: Constant Area Combustor .....	131
4.5 Constant Pressure Combustors.....	132
4.6 Fuels for Air-Breathing Engines.....	134
4.7 Combustor Efficiency.....	136
4.8 Combustor Configuration.....	137
4.9 Example: Secondary Air for Cooling .....	141
4.10 Criteria for Equilibrium in Chemical Reactions .....	143
4.11 Calculation of Equilibrium Compositions .....	144
4.12 Example: Homogeneous Reactions with a Direct Solution .....	146
4.13 Example: Homogeneous Reactions with Trial-and-Error Solution.....	147
4.14 Example: Estimation of Importance of Neglected Product Species .....	149
4.15 Adiabatic Flame Temperature.....	150
4.16 Example: Adiabatic Flame Temperature for Stoichiometric H <sub>2</sub> –O <sub>2</sub> Mixture ....	153
4.17 Nomenclature .....	154
4.17.1 Subscripts.....	155
4.17.2 Superscripts.....	156
4.18 Exercises.....	156
References .....	159
<b>CHAPTER 5 Nozzles .....</b>	<b>161</b>
5.1 Nozzle Characteristics and Simplifying Assumptions .....	161
5.1.1 Frictional effects .....	162
5.1.2 Drag effects.....	163
5.1.3 Energy transfer effects.....	163
5.2 Flow in a Nozzle with Simple Area Change .....	164
5.3 Mass Flow in an Isentropic Nozzle .....	166
5.4 Nozzle Operation.....	168
5.5 Normal Shock inside the Nozzle .....	170
5.6 Example: Shock in Nozzle.....	173
5.7 Two-Dimensional Considerations in Nozzle Flows .....	173
5.8 Example: Overexpanded Nozzles .....	175
5.9 Example: Underexpanded Nozzles .....	176
5.10 Afterburning for Increased Thrust .....	177
5.11 Nozzle Configurations .....	179
5.11.1 Geometry requirements .....	179
5.11.2 Simple ejector theory.....	180
5.11.3 Ejector application to high-performance aircraft.....	183
5.11.4 Convergent–divergent iris nozzle .....	185
5.11.5 Thrust-vectoring nozzles .....	186

<b>5.12</b>	Nozzle Performance .....	186
<b>5.13</b>	Nomenclature .....	191
5.13.1	Subscripts.....	192
5.13.2	Superscripts.....	192

<b>11.9</b>	Nomenclature .....	476
11.9.1	Subscripts .....	477
11.9.2	Superscript .....	478
<b>11.10</b>	Exercises.....	478
	References .....	481

<b>CHAPTER 12 Solid Propellant Rockets .....</b>	<b>483</b>
<b>12.1 Solid Rocket Description .....</b>	<b>484</b>
<b>12.2 Solid Propellant Grain Configurations.....</b>	<b>485</b>
12.2.1 Homogeneous propellant.....	485
12.2.2 Heterogeneous or composite propellant.....	485
12.2.3 Grain cross sections.....	486
<b>12.3 Burning Rate .....</b>	<b>487</b>
<b>12.4 Grain Design for Thrust-Time Tailoring .....</b>	<b>487</b>
<b>12.5 Combustion Chamber Pressure.....</b>	<b>489</b>
12.5.1 Mass conservation analysis .....	489
12.5.2 Equilibrium chamber pressure.....	491
12.5.3 Combustion chamber stability.....	492
12.5.4 Propellant performance sensitivity .....	493
<b>12.6 Erosive Burning.....</b>	<b>494</b>
<b>12.7 Solid Rocket Performance .....</b>	<b>496</b>
12.7.1 Large-scale solid rocket motor.....	496
12.7.2 Dual-thrust rocket motors.....	497
12.7.3 Solid rocket motor casings .....	498
<b>12.8 Transient Operations .....</b>	<b>499</b>
12.8.1 Initial pressure rise .....	499
12.8.2 Local equilibrium pressure variation.....	500
12.8.3 Final pressure drop .....	501
<b>12.9 Example: Tubular Grain Rocket Motor.....</b>	<b>501</b>
<b>12.10 Nozzle Heat Transfer .....</b>	<b>502</b>
12.10.1 Heat sink nozzles .....	502
12.10.2 Melting ablator nozzles with constant heat transfer .....	505
12.10.3 Mass transfer for nozzle thermal protection .....	506
<b>12.11 Hybrid Rockets.....</b>	<b>508</b>
12.11.1 Hybrid rocket operation.....	508
12.11.2 Hybrid rocket characteristics .....	510
12.11.3 Example: Hybrid rocket motor fuel grain design .....	511
<b>12.12 Nomenclature .....</b>	<b>512</b>
12.12.1 Subscripts .....	513
12.12.2 Superscripts .....	514
<b>12.13 Exercises.....</b>	<b>514</b>
References .....	516
<b>CHAPTER 13 Nuclear Rockets .....</b>	<b>517</b>
<b>13.1 Nuclear Rockets for Space Exploration .....</b>	<b>517</b>
<b>13.2 Nuclear Rocket Engine Configuration.....</b>	<b>518</b>
<b>13.3 Exhaust Velocity .....</b>	<b>519</b>
<b>13.4 Nuclear Reactors .....</b>	<b>520</b>
<b>13.5 Nuclear Reactions .....</b>	<b>521</b>

<b>13.6</b>	Reactor Operation .....	523
<b>13.7</b>	Fuels for Nuclear Propulsion and Power.....	526
<b>13.8</b>	Nuclear Rocket Performance .....	526
13.8.1	Solid core reactors .....	526
13.8.2	Particle bed reactors .....	527
13.8.3	Propellant feed systems .....	529
13.8.4	Comparison of nuclear and chemical rockets.....	530
<b>13.9</b>	Gas Core Nuclear Rockets.....	531
13.9.1	Base bleed fuel confinement .....	534
<b>13.10</b>	Nuclear Ramjets .....	535
13.10.1	A nuclear ramjet for planetary exploration.....	535
<b>13.11</b>	Nomenclature .....	538
<b>13.12</b>	Exercises.....	539
	References .....	539
<b>CHAPTER 14</b>	<b>Space Propulsion .....</b>	<b>541</b>
14.1	Space Propulsion Systems .....	541
14.2	Electric Propulsion Systems .....	543
14.3	Electrothermal Propulsion Devices .....	545
14.3.1	Resistojets .....	548
14.3.2	Arcjets .....	549
14.3.3	Radio-frequency and microwave excited jets .....	550
14.4	Electrostatic Propulsion Devices .....	550
14.4.1	One-dimensional electrostatic thruster.....	551
14.4.2	Ion stream speed .....	551
14.4.3	Electric field and ion current.....	552
14.4.4	Performance implications .....	554
14.4.5	Surface contact source of ions .....	555
14.4.6	Example: Surface contact source dimensions.....	556
14.4.7	Electron bombardment source of ions .....	556
14.4.8	Hall thruster .....	557
14.4.9	An ion rocket for a deep space mission.....	558
14.5	Electromagnetic Propulsion Devices .....	559
14.5.1	Pulsed plasma thrusters .....	560
14.6	Nomenclature .....	563
14.6.1	Subscripts .....	564
14.7	Exercises.....	564
	References .....	564
<b>CHAPTER 15</b>	<b>Propulsion Aspects of High-Speed Flight .....</b>	<b>567</b>
15.1	Flight Time .....	567
15.2	Flight Productivity .....	569

<b>15.3</b> Fuel Burn.....	570
<b>15.4</b> Flight Range .....	571
References .....	573
 Appendix A Shock Waves, Expansions, Tables and Charts .....	575
Appendix B Properties of Hydrocarbon Fuel Combustion.....	593
Appendix C Earth's Atmosphere .....	599
Appendix D Boost Phase and Staging of Rockets.....	613
Appendix E Safety, Reliability, and Risk Assessment .....	629
Appendix F Aircraft Performance .....	641
Appendix G Thermodynamic Properties of Selected Species.....	657
Index .....	673
