## Preface to the Second Edition

In the first edition of *The Enzymes of Biological Membranes*, published in four volumes in 1976, we collected the mass of widely scattered information on membrane-linked enzymes and metabolic processes up to about 1975. This was a period of transition from the romantic phase of membrane biochemistry, preoccupied with conceptual developments and the general properties of membranes, to an era of mounting interest in the specific properties of membrane-linked enzymes analyzed from the viewpoints of modern enzymology. The level of sophistication in various areas of membrane research varied widely; the structures of cytochrome *c* and cytochrome *b<sub>5</sub>* were known to atomic detail, while the majority of membrane-linked enzymes had not even been isolated.

In the intervening eight years our knowledge of membrane-linked enzymes expanded beyond the wildest expectations. The purpose of the second edition of *The Enzymes of Biological Membranes* is to record these developments. The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes. In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed. The third and fourth volumes review recent developments in active transport, oxidative phosphorylation, and photosynthesis.

The topics of each volume represent a coherent group in an effort to satisfy specialized interests, but this subdivision is to some extent arbitrary. Several subjects of the first edition were omitted either because they were extensively reviewed recently or because there was not sufficient new information to warrant review at this time. New chapters cover areas where major advances have taken place in recent years. As a result, the second edition is a fundamentally new treatise that faithfully and critically reflects the major transformation and progress of membrane biochemistry in the last eight years. For a deeper insight into membrane function, the coverage includes not only well-defined enzymes, but several membrane proteins with noncatalytic functions.

We hope that *The Enzymes of Biological Membranes* will catalyze the search for general principles that may lead to better understanding of the structure and function of membrane proteins. We ask for your comments and criticisms that may help us to achieve this aim.

My warmest thanks to all who contributed to this work.

Anthony N. Martonosi

# Contents of Volume 1

1. *Electron Microscopy of Biological Membranes*  
*K. Mühlethaler and Frances Jay*
2. *Associations of Cytoskeletal Proteins with Plasma Membranes*  
*Carl M. Cohen and Deborah K. Smith*
3. *Cell Coupling*  
*Camillo Peracchia*
4. *Lipid Polymorphism and Membrane Function*  
*B. de Kruijff, P. R. Cullis, A. J. Verkleij, M. J. Hope,  
C. J. A. van Echteld, and T. F. Taraschi*
5. *Intrinsic Protein-Lipid Interactions in Biomembranes*  
*Jeff Leaver and Dennis Chapman*
6. *On the Molecular Structure of the Gramicidin Transmembrane: The  
Cytochrome Channel*  
*Dan W. Urry*
7. *Conventional ESR Spectroscopy of Membrane Proteins: Recent  
Applications*  
*Philippe F. Devaux*
8. *Saturation Transfer EPR Studies of Microsecond Rotational Motions in  
Biological Membranes*  
*David D. Thomas*

9. *Dye Probes of Cell, Organelle, and Vesicle Membrane Potentials*  
*Alan S. Waggoner*
  10. *Selective Covalent Modification of Membrane Components*  
*Hans Sigrist and Peter Zahler*
  11. *Calcium Ions, Enzymes, and Cell Fusion*  
*Jack A. Lucy*
  12. *Role of Membrane Fluidity in the Expression of Biological Functions*  
*Juan Yguerabide and Evangelina E. Yguerabide*
  13. *Rotational Diffusion of Membrane Proteins: Optical Methods*  
*Peter B. Garland and Pauline Johnson*
- Index*

# Contents of Volume 2

14. *Ether-Linked Glycerolipids and Their Bioactive Species: Enzymes and Metabolic Regulation*  
*Fred Snyder, Ten-ching Lee, and Robert L. Wykle*
15. *Fatty Acid Synthetases of Eukaryotic Cells*  
*Salih J. Wakil and James K. Stoops*
16. *Properties and Function of Phosphatidylcholine Transfer Proteins*  
*Karel W. A. Wirtz, Tom Teerlink, and Rob Akeroyd*
17. *Carnitine Palmitoyltransferase and Transport of Fatty Acids*  
*Charles L. Hoppel and Linda Brady*
18. *Membrane-Bound Enzymes of Cholesterol Biosynthesis: Resolution and Identification of the Components Required for Cholesterol Synthesis from Squalene*  
*James M. Trzaskos and James L. Gaylor*
19. *Membrane-Bound Enzymes in Plant Sterol Biosynthesis*  
*Trevor W. Goodwin, C.B.E., F.R.S.*
20. *Glycosyltransferases Involved in the Biosynthesis of Protein-Bound Oligosaccharides of the Asparagine-N-Acetyl-D-Glucosamine and Serine (Threonine)-N-Acetyl-D-Galactosamine Types*  
*Harry Schachter, Saroja Narasimhan, Paul Gleeson, George Vella, and Inka Brockhausen*

21. *Biosynthesis of the Bacterial Envelope Polymers Teichoic Acid and Teichuronic Acid*  
*Ian C. Hancock and James Baddiley*
22. *The Major Outer-Membrane Lipoprotein of Escherichia coli: Secretion, Modification, and Processing*  
*George P. Vlasuk, John Ghrayeb, and Masayori Inouye*
23. *Anchoring and Biosynthesis of a Major Intrinsic Plasma Membrane Protein: The Sucrase–Isomaltase Complex of the Small-Intestinal Brush Border*  
*Giorgio Semenza*
24. *Multifunctional Glucose-6-Phosphatase: A Critical Review*  
*Robert C. Nordlie and Katherine A. Sukalski*
25. *The Beta Adrenergic Receptor: Elucidation of its Molecular Structure*  
*Robert G. L. Shorr, Robert J. Lefkowitz, and Mark G. Caron*
26. *Ionic Channels and Their Metabolic Control*  
*P. G. Kostyuk*

*Index*

# Contents of Volume 3

27. *The Energetics of Active Transport*  
W. D. Stein
28. *The Na<sup>+</sup>,K<sup>+</sup>-Transporting Adenosine Triphosphatase*  
I. M. Glynn
29. *The Sarcoplasmic Reticulum Membrane*  
Marek Michalak
30. *Kinetic Regulation of Catalytic and Transport Activities in Sarcoplasmic Reticulum ATPase*  
Giuseppe Inesi and Leopoldo de Meis
31. *Calcium-Induced Potassium Transport in Cell Membranes*  
B. Sarkadi and G. Gárdos
32. *Biochemistry of Plasma-Membrane Calcium-Transporting Systems*  
Ernesto Carafoli
33. *The Calcium Carriers of Mitochondria*  
Martin Crompton
34. *Intestinal Phosphate Transport*  
Meinrad Peterlik
35. *Ion Transport in Nerve Membrane*  
Lorin J. Mullins

36. *The Molecular Basis of Neurotransmission: Structure and Function of the Nicotinic Acetylcholine Receptor*  
Robert Anholt, Jon Lindstrom, and Mauricio Montal
37. *Structural Distinctions among Acetylcholinesterase Forms*  
Terrone L. Rosenberry
38. *The Gastric H,K-ATPase*  
L. D. Faller, A. Smolka, and G. Sachs
39. *H<sup>+</sup>-Translocating ATPase and Other Membrane Enzymes Involved in the Accumulation and Storage of Biological Amines in Chromaffin Granules*  
Sally E. Carty, Robert G. Johnson, and Antonio Scarpa
40. *Hexose Transport and its Regulation in Mammalian Cells*  
Jeffrey E. Pessin and Michael P. Czech
41. *The Bacterial Phosphoenolpyruvate: Sugar Phosphotransferase System*  
Norman D. Meadow, Maria A. Kukuruzinska, and Saul Roseman
42. *The Maltose-Maltodextrin-Transport System of Escherichia coli K-12*  
Howard A. Shuman
43. *Bacterial Amino-Acid-Transport Systems*  
Robert Landick, Dale L. Oxender, and Giovanna Ferro-Luzzi Ames
44. *The Iron-Transport Systems of Escherichia coli*  
Volkmar Braun
45. *Potassium Pathways in Escherichia coli*  
Adam Kepes, Jean Meury, and Aline Robin

# Contents of Volume 4

## 46. *The Enzymes and the Enzyme Complexes of the Mitochondrial Oxidative Phosphorylation System*

*Youssef Hatefi, C. Ian Ragan, and Yves M. Galante*

I.	Introduction .....	1
II.	Complex I (NADH-Ubiquinone Oxidoreductase) .....	6
	A. Composition of Complex I 7 • B. Enzymic Properties of Complex I 9 • C. Spectroscopic Properties of Complex I 10 • D. Resolution of Complex I 11 • E. Structure of Complex I 16 • F. Mechanism of Action of Complex I 18	
III.	Complex II (Succinate-Ubiquinone Oxidoreductase) .....	20
	A. Composition of Complex II 20 • B. Succinate Dehydrogenase 20 • C. Cytochrome <i>b</i> <sub>560</sub> 23 • D. Activities of Complex II 25 • E. Ubiquinone-Binding Proteins 27	
IV.	Complex III (Ubiquinol-Cytochrome <i>c</i> Oxidoreductase) .....	28
	A. Composition and Structure of Complex III 28 • B. Mechanism of Action of Complex III 32 • C. Inhibitors of Complex III 35	
V.	Complex IV (Ferrocycytochrome <i>c</i> -Oxygen Oxidoreductase) .....	35
VI.	Complex V (ATP Synthase) .....	36
	A. Isolation of Complex V 36 • B. Composition of Complex V 37 • C. Structure of Complex V 39 • D. Role of the Subunits of Complex V 40 • E. Activities of Complex V 46	
VII.	Mechanisms of ATP Hydrolysis and Synthesis .....	47
	A. Mechanistic Considerations 47 • B. Structure of the ATPase Active Site 51 • C. The Nature of the "High-Energy" Intermediate 52	
VIII.	Arrangement of Proteins in the Mitochondrial Inner Membrane .....	54
	References .....	56

## 47. *Proton Diffusion and the Bioenergies of Enzymes in Membranes*

*Robert J. P. Williams*

I.	Introduction .....	71
	A. Chemiosmosis and Local Domains 71	
II.	Proton Diffusion .....	74
	A. Models 74 • B. Summary of Inorganic Proton Channels 81	

III.	The Injection of Protons to a Channel .....	81
IV.	Biological Proton Channels: Introduction .....	83
	A. Light-Activated Proton Migration 84 • B. Redox-Activated Proton Channels 86 • C. Gates 89 • D. The ATP-Synthase 93	
V.	The Kinases and ATP-Synthase: The $F_1$ Unit .....	100
	A. Calcium-Binding Proteins—Energy Transfer 100 • B. The Energization of $F_0F_1$ 101 • C. The ATP-ADP Reaction 102	
VI.	Proton Transfer from Generator to ATP-Synthase .....	104
	References .....	107
48.	<i>Relationships between Structure and Function in Cytochrome Oxidase</i>	
	<i>Mårten Wikström, Matti Saraste, and Timo Penttilä</i>	
I.	Introduction and Scope .....	111
II.	Composition of the Enzyme .....	112
	A. The Prosthetic Groups 112 • B. The Apoprotein 114	
III.	Quaternary Structure .....	114
IV.	The Mitochondrially Coded Subunits .....	117
V.	Cytoplasmic Subunits .....	119
VI.	Location and Structure of the Prosthetic Groups .....	123
	A. Copper of Subunit II 123 • B. Heme of Subunit II 126 • C. Heme and Copper of Subunit I 128	
VII.	The Binding of Cytochrome <i>c</i> .....	133
VIII.	The Mechanism of Reduction of Dioxxygen .....	134
IX.	Electron Transfer, Proton Translocation, and Subunit III .....	136
	A. Electron Transfer 137 • B. Proton Translocation and the Role of Subunit III 137 • C. Structure and Possible Function of Subunit III 139 • D. On Possible Mechanisms of Proton Translocation 140	
X.	Concluding Remarks .....	142
	References .....	142
49.	<i><math>H^+</math>-ATPase as an Energy-Converting Enzyme</i>	
	<i>Toshiro Hamamoto and Yasuo Kagawa</i>	
I.	Introduction .....	149
II.	General Properties .....	150
	A. Distribution 151 • B. Isolation 153 • C. Structure 154	
	D. Reconstitution from Subunits 156	
III.	Reconstitution into Lipid Bilayers .....	158
	A. Phospholipids 158 • B. Proteoliposomes 158	
IV.	Ligand-Binding Activity .....	159
	A. Nucleotide Binding 159 • B. Inhibitors 160
