PHOTOGRAPHIC CHEMISTRY

Volume 2

PIERRE GLAFKIDES.

Chemical Engineer of the Institute of Chemistry of Paris

PHOTOGRAPHIC CHEMISTRY

VOLUME TWO

Translated from the French by
KEITH M. HORNSBY, F.R.P.S.

FOUNTAIN PRESS · LONDON

Volume Two
of the English language edition first published 1960

Translated into English in two volumes from the second French edition
with the authorization of the
Publications Photographiques et Cinematographiques Paul Montel, Paris

Printed in Great Britain by
J. W. Arrowsmith Ltd., Bristol

LIGHT SOURCES	503
---------------	-----

- §449 Black body radiation (503) §449b Actual sources (504) §450 Colour temperatures (505) §451 Measurement of colour temperature. Thermo-colorimeters (506) §452 Practical light sources (506) §453 Carbon arc (507) §454 Mercury vapour lamp (508) §455 Fluorescent lamps (508) §456 Metallic arc lamps (509) §457 Compact source arcs (510) §458 Discharge lamps (510) §459 Flashbulbs (511) §460 Daylight (512) §461 Light standards (512) §462 Compensating filters (513) §463 Liquid filters (514) §464 Glass filters (514) §465 Coloured gelatin filters (516) §465b Cellulose ester filters (517) §466 Correction filters absorbing violet and ultra-violet (517) §467 Green correction filters (518) §468 Interference filters (519) §468b Other filters (519) §469 Filters transmitting ultra-violet (520) §470 Filters transmitting infra-red (520) §471 Infra-red absorbing filters (520) §472 Neutral grey filters (521) §473 Spectrosensitometry (521) §474 Operating methods (523) §475 Absolute-colour sensitivity (524) §476 Colour filter method (526) §477 Apparent spectral sensitivity (527) §478 Absolute spectral sensitivity (529) §479 Effect of wavelength on contrast (530) §480 Influence of temperature (530)

<i>Chapter XXVII</i>

PRINCIPLES OF COLOUR REPRODUCTION	534
-----------------------------------	-----

- §481 Characteristics of colour (534) §482 Visibility of colours (535) §483 Complementary colours (535) §484 Mixtures of colours (536) §485 C.I.E. system (537) §486 Physiological phenomena (538) §487 Trichromatic analysis (540) §488 Polychromatic analysis (540) §489 Three-colour separation (541) §490 Two-colour systems (543) §491 Additive synthesis (544) §492 Subtractive synthesis (544) §493 Direct methods (546) §494 Additive processes (547) §495 Lenticular films (549) §496 Colour screen processes (550) §497 Dufaycolor film (551) §498 Other screen processes (552)

*Chapter XXVIII***SEPARATION NEGATIVES FOR
COLOUR REPRODUCTION***Page*

554

- §499 Reproduction methods (554) §500 Direct separation negatives (555)
 §501 Bipacks and tripacks (555) §502 Beam splitting systems (556) §503
 Preparation of separation negatives from images in superimposed layers,
 developed but not coloured (557) §504 Layers separable after development
 (558) §505 Layers separable before development (559) §506 Separation by
 additive methods (560) §507 Complementary colour negatives (561) §508
 Sensitivity of colour films (562) §509 Resolving power (563) §510 Reversal
 films (564) §511 Constitution of a colour development film (564) §512
 Emulsions (566) §513 Yellow filter (567) §514 Printing from complemen-
 tary colour negatives (568) §515 Printing duplicate colour negatives (570)
 §516 Duplicating colour transparencies (571) §516b Control of printing
 (571)

*Chapter XXIX***CONTROL AND CORRECTION OF
COLOUR IMAGES**

573

- §517 Unwanted absorptions (573) §518 Masks (575) §519 Correction with
 two masks (576) §520 Masks on two layer films (578) §521 Unsharp masks
 (579) §522 Magenta coloured masks (579) §523 Masking with coloured
 couplers (580) §524 Black record (581) §525 Actual separation of greys
 (581) §526 Contrast masks (583) §526b Correction with fluorescent pig-
 ments (583) §527 Spectrosensitograms (584) §528 Absorption spectrum
 (584) §529 Absolute density of coloured layers (586) §529b Equivalent
 density (587) §530 Measurément of colour densities (587) §531 Colour
 balance (589) §532 Taking colour photographs (590) §533 Measurement
 of subject luminosities (591)

*Chapter XXX***COLOUR DEVELOPMENT**

593

- §534 Theory of colour development (593) §535 Colour developing agents
 (595) §536 Cyan couplers (596) §537 Yellow couplers (597) §538 Magenta
 couplers (600) §539 Other coupling systems (603) §540 Non-diffusing
 couplers (606) §541 Preparation of long chain non-diffusing cyan couplers
 (607) §541b Yellow non-diffusing couplers (609) §541c Magenta non-
 diffusing couplers (610) §542 Coupler binders (612) §543 Coloured
 couplers (613) §544 Agfacolor process (615) §543 Ansco Color process
 (616) §546 Gevacolor process (619) §547 Telcolor process (619) §548
 Ferraniacolor process (620) §549 Du Pont 'Color Release positive film'
 (622) §550 Eastman Color process (623) §551 Kodachrome (626) §552
 Old, controlled penetration Kodachrome process (627) §553 Single layer
 papers (628) §554 Colour developers containing coupler (628) §554b
 Colour developer formulas (629) §555 Universal developers for coupler-
 containing emulsions (631) §555b Universal developers for processing nega-
 tive films (632) §555c Gordod's formulas for papers (633) §556 Working

method for colour developing (634) §557 Oxidation of colour developers (635) §558 Faults in the multilayer system (636) §559 Colour development faults (636) §560 Correction of colour casts (637) §561 Alteration of images (639) §562 Colour developer analysis (639)

Chapter XXXI

PRODUCTION OF COLOURED IMAGES
AFTER DEVELOPMENT

643

§563 Colour coupling development (643) §564 Principle of the method (643) §565 Gasparcolor (644) §566 Christensen process (645) §567 Destruction of a dye by oxidation (645) §568 Coloured images by local oxidation of organic compounds (646) §569 Principle of ferrocyanide toning (646) §570 Iron blue toning (647) §571 Nickel toning (649) §572 Complex toning in acid media (650) §573 Titanium yellow toning (651) §574 Vanadium yellow toning (651) §575 Uranium toning (651) §576 Yellow toning with lead chromate (652) §577 Yellow toning with mercury (652) §578 Yellow cadmium toning (653) §579 Toning by precipitating metallic salts of organic compounds (653) §580 Principle of mordanting and dyeing (653) §581 Silver iodide mordants (654) §582 Mordanting with cuprous thiocyanate (655) §583 Mordanting with copper ferrocyanide (655) §584 Mordanting with the ferrocyanides of titanium and other metals (657) §585 Formation of mordants by development (657) §586 Two-colour processes (658) §587 Two-colour processes using ordinary film (658) §588 Three-colour processes with separate printings (659) §589 Supercinecolor process (660) §590 Process using formation of silver halide (661) §591 Miscellaneous processes (661) -

Chapter XXXII

PHOTOGRAPHIC IMAGES BY MODIFYING
GELATIN AND OTHER COLLOIDS

663

§592 Photographic methods of modifying gelatin (663) §593 Tanning developers (664) §594 Tanning bleaches (666) §595 Contact hardening (667) §596 Relief images by local softening of the gelatin (668) §597 Dichromated gelatin (669) §598 Dichromated gum (gum bichromate) (671) §599 Dichromated albumen (672) §600 Dichromated polyvinyl alcohol (673) §601 Dichromated cellulose (673) §602 Dichromated glue (or enamel process) (674) ... §603 Dichromated shellac (674) §604 Ferric chloride process (675) §605 Insolubilizing with diazonium compounds (676) §606 Bitumen (676) §607 Photosensitive resins (677) §608 The carbon process (677) §609 Carbro or ozobrom process (679) §610 Greasy ink processes (679) §611 Collotype (680) §612 Half-tone (681) §613 Bimetallic plates (683) §614 Photogravure (683) §615 Off-set (684) §616 Photomechanical printing inks (685) §617 Photoceramics (685) §618 Manufacture of graticules by photographic means (685) §619 Manufacture of metallic grids by photographic means (686) §620 Silk-screens (686)

*Chapter XXXIII***PHOTOGRAPHIC PROCESSES INVOLVING
THE DYEING OF GELATIN***Page*

689

- §621 Dyeing of gelatin (689) §622 Applications of selected dyeing of unhardened gelatin (691) §623 Dyed reliefs (692) §624 The Flexichrome process (693) §625 Principles of imbibition transfer (694) §626 The transfer operation (696) §627 Colour prints on paper by imbibition (696) §628 Colour films by imbibition (698) §629 Pinatype (699) §630 Transfer of mordants or colour couplers (700)

*Chapter XXXIV***PHOTOCHEMICAL DESTRUCTION AND
FORMATION OF DYES**

702

- §631 General considerations (702) §632 The support colloid (702) §633 The decolorizable dyes (703) §634 The sensitizers (704) §635 Ternary and binary systems (705) §636 Concentration of sensitizer (705) §637 Stabilization (706) §638 Fixing (706) §639 Examples of formulas of decolorizable coatings (707) §640 Bleaching by oxidation (708) §641 Decolorizable layers based on silver salts of organic dyes (708) §642 Colour images by formation of azo dyes from diazosulphonates (709) §643 The azo dyes (709) §644 Diazosulphonates (710) §645 Preparation of the diazosulphonates (711) §646 Colours obtained with diazosulphonates (712) §647 Leuco bases (713) §648 Naphthoquinones (714) §649 Organic bases (714) §649b Photosensitive plastics (715) §650 Principles of diazotype process (715) §651 Usable diazonium compounds (716) §652 Suitable couplers (718) §653 Practical formulas for dry diazo papers (719) §654 Semi-wet development (721) §655 Protein diazonium compounds (722) §656 Manufacture of diazo papers (723) §657 Sensitometry of diazotype layers (723) §658 Reflex printing (723) §659 Diazo films (724)

*Chapter XXXVIII***CARBOCYANINES***Page*

807

- §724 Characteristics of the carbocyanines (807) §725 Quinoline carbocyanines (808) §726 Thiacarbocyanines with a simple chain (810) §727 Benzothiacarbocyanines with a simple chain (813) §728 Simple selenacarbocyanines (814) §729 Simple oxacarbocyanines (815) §730 Indocarbocyanines (815) §731 Iminazocarbocyanines (817) §732 Asymmetrical carbocyanines with unsubstituted chains (817) §733 Chain substituted symmetrical carbocyanines (820) §734 Meso-substituted symmetrical thiacarbocyanines (822) §735 Meso-substituted symmetrical selenacarbocyanines (824) §736 Meso-substituted symmetrical oxacarbocyanines (825) §737 Symmetrical carbocyanines with special meso substituents (826) §737b Carbocyanine bases (827) §738 Meso-substituted asymmetrical carbocyanines (828) §739 Preparation of meso-substituted asymmetrical carbocyanine using the amidines (828) §740 Preparation of meso-substituted asymmetrical carbocyanines using ketone derivatives (829) §741 Preparation of meso-substituted asymmetrical carbocyanines using the thioketo derivatives (831) §742 Carbocyanines with hydrazine chain substituents (834) §743 Carbocyanines derived from benzothiazines, perinaphthothiazines and thiodiazole (834) §744 Oxadiazole carbocyanines (835) §745 Acid cyanines (835)

*Chapter XXXIX***HEMICYANINES**

838

- §746 Constitution of the pinaflavols (838) §747 Preparation of the pinaflavols (839) §748 Thiazole styryl cyanines (840) §749 Styryl derivatives of oxygen heterocyclic nuclei (842) §750 Styrylvinyl cyanines (842) §751 Double hemicyanines (843) §751b Thioflavines (843) §752 Structure of the merocyanines (844) §753 Merocyanines with no methine chain (845) §753b Neutrocyanines (847) §754 Dimethine merocyanines: synthesis with diphenylformamidine (847) §755 Dimethine merocyanines: syntheses via aldehydes, ketones and orthoesters (850) §756 Sensitizing action of some dimethine merocyanines (854) §757 Polymethine merocyanines (855) §758 Merocyanines with nitrile groups (856) §759 Complex merocyanines (857) §760 Sensitizing action of some complex merocyanines (861) §761 Complex merocyanines with trimethine second chain: rhodacarbocyanines (862) §762 Tetranuclear complex rhodanine merocyanines (864) §763 Double merocyanines (867) §764 Constitution and preparation of oxanols (867) §765 Oxanols with a single cyclic nucleus (869) §766 Ketomethylene hemicyanines (869) §767 Acetone dicarboxylic ester derivatives (870) §768 Carotenes (871) §769 Diaminohemicyanines (872) §770 Azacyanines (874) §771 Diazine dyes (874) §772 Anilinovinyl and keto derivatives of cyclammonium bases (875) §773 Phthaleins (876) §774 Acridine dyes (878) §775 Other dyes (878)

Chapter XL

Page

INFRA-RED SENSITIZATION

882

- §776 The infra-red spectrum (882) §777 Recording methods (882) §778 Direct photographic methods (883) §779 Applications (884) §780 Dicyanines (885) §781 Kryptocyanines (886) §782 Neocyanines (888) §783 Dicarbocyanines (890) §784 Principal dicarbocyanines (891) §785 Tricarbocyanines (893) §786 Preparation of the tricarbocyanines (893) §787 Principal tri-carbocyanines (895) §788 Tetracarbocyanines (897) §789 Principal tetracarbocyanines (899) §790 Pentacarbocyanines (899) §791 Stabilization of infra-red sensitized emulsions (900)

Chapter XLI

COLOUR SENSITIZING TECHNIQUE AND THEORY

902

- §792 Sensitizing by direct incorporation (902) §793 Sensitizing before digestion (903) §794 Sensitizing by bathing (904) §795 Colour sensitization with inorganic compounds (904) §796 Hypersensitizing (905) §797 Aggregation, and absorption spectra of the cyanines (907) §798 Aggregation of cyanines on gelatin (908) §799 Adsorption of sensitizing dyes on the silver halides (908) §800 Second order sensitization (909) §801 Effect of the molecular planarity of a dye on its sensitizing efficiency (910) §802 Anti-sensitization (911) §803 Desensitization by sensitizers (911) §804 Internal photoelectric effect of sensitizing dyes (912) §805 Mechanism of colour sensitization (912) §806 Theory of supersensitization (913) §807 Supersensitizing compounds (914) §808 Supersensitizers derived from gelatin (917)

Chapter XLII

DESENSITIZATION

920

- §809 The phenomenon of desensitization (920) §810 Mechanism (920) §811 The desensitizing bath (921) §812 Azines (923) §813 Eurhodines (924) §814 Safranines (924) §815 Alkyl phenazoniums (925) §816 Aposafranines (925) §817 Isosafranines (925) §818 Tetrazines (926) §819 Quinoxalines (926) §820 Nitro derivatives (927) §821 Azo dyes (927) §822 Anthraquinone derivatives (928) §823 Di- and triphenylmethane derivatives (929) §824 Carbocyanines (929) §825 Styryl derivatives (929) §826 Styryl vinyl (or cinnamylidene) derivatives (931) §827 Styryl derivatives of benzopyrylium (931) §828 Furylvinylquinolines (931) §829 Methine-anthraquinone derivatives (932) §830 Anils (932) §831 Azacyanines (932) §832 Triazoles (933) §833 Dipyridine compounds (933)

*Appendix***SUMMARY OF FUNDAMENTAL CHEMICAL LAWS**

<i>Chapter XLIII</i>	<i>Page</i>
THE ATOMS	937
§834 Structure of atoms (937) §835 The nucleus (937) §836 Isotopes (939)	
§837 The electron (940)	
<i>Chapter XLIV</i>	
FUNDAMENTAL CHEMICAL PRINCIPLES	942
§838 Symbolic representation of chemical substances (942) §839 Atomic weights (942) §840 Conservation of matter (944) §841 Inert elements (945) §842 The ions (948) §843 Valency (949) §844 Classification of the simple elements (951) §845 Acids (952) §846 Bases (954) §847 Complexes (955) §848 The salts (956) §849 The chemical reaction (959)	
<i>Chapter XLV</i>	
CONSTITUTION AND PROPERTIES OF ORGANIC COMPOUNDS	961
§850 Organic radicals (961) §851 Functions (962) §852 Cyclic compounds (965)
