Preface

Progress in urology and its allied fields has been momentous since the first edition of *Urology* appeared in 1954; because of this a new edition has become imperative.

Death, retirement, and editorial prerogative have compelled many changes in the roster and make-up of the Second Edition. We mourn the passing of Drs. Dodson, Engle, Ferrier, Jailer, Carl Moore, Thomas D. Moore, Rovenstine, Sargent, and Vest, whose contributions enhanced the original book. Fortunately Doctor Rovenstine's co-author, Dr. S. G. Hershey, brilliantly revised and updated their chapter, *Anesthesia in Urology*, so that this important subject is still of profit to us. We regret the retirement of other authors and the loss of their valued teachings. And we abhor the necessity for deleting the splendid section on Medical Diseases of the Kidney—in adults by Dr. William B. Goldring, and in children by Dr. Elvira Goettsch—to make way for exact urologic subjects without greatly expanding the book.

My gratitude is extended to all participants in this new book; their united efforts despite professional pressures have made the project one to be honored. To W. B. Saunders Company go my special thanks for outstanding cooperation in all matters concerning the Second Edition, and for the confidence with which one anticipates a superior end result.
