

PLASTICIZERS

60 MHz SPECTRA

Vol. I

EIM-E300M

LEGAL NOTICE

The publication of the physical data of the Sadtler Standard Spectra and the Sadtler Commercial Spectra is intended to be descriptive. As the samples of the materials represented have come generally from other sources than our own laboratories and frequently without the donors knowledge of their part in this publication, there can be no warranty either implied or otherwise.

On the other hand every effort is made by Sadtler Research Laboratories to be sure that the reliability of the published spectrum is the best. When improved data is available or errors are called to our attention we revise and reissue the proper replacement spectra.

COPYRIGHT NOTICE

With the exception of brief intra-company reports, the spectra may not be reproduced without explicit written permission of the Sadtler Research Laboratories, Inc.

PLASTICIZERS

60 MHz NUCLEAR MAGNETIC RESONANCE SPECTRA

The Sadler Commercial Collection of Plasticizers, 60 MHz Nuclear Magnetic Resonance Spectra, is an initial publication of 300 NMR spectra of commercially available plasticizers. The catalog contains representative spectra for almost every type of primary, secondary and specialty plasticizer listed in the "Plasticizer Chart", Modern Plastics Encyclopedia 1968.

Protons give rise to signals of varying position, intensity and complexity. The position of the signal, defined as the chemical shift, is dependent on the immediate electronic environment of the proton and is therefore an indication of its chemical nature. The intensity of a signal, which can be obtained by integration, is a measurement of the number of protons which cause that signal.

The integration curve for each spectrum is superimposed in color on the NMR scan.

INSTRUMENTATION

The spectra were determined at 60 mc/sec on a Varian Model A-60A spectrometer at magnet temperature of approximately 35°C (unless another temperature is noted on the spectrum). Each sample was dissolved in a suitable solvent together with tetramethylsilane (TMS) as an internal standard.

PRESENTATION

Each spectrum has an identifying NMR number, prefixed by E and suffixed by M; the corresponding IR number of the compound in the Sadler Commercial Prism Collection is also shown.

The following information is also reported for each spectrum.

A. Product Data

1. Commercial name of product
2. Chemical description
3. Physical data (if known)
4. Source

B. Structural Assignment

If the structure of the compound is known, it has been drawn on the spectrum and proton assignments have been made. The assignment values are noted on the spectrum heading.

C. Instrument Data

1. Filter bandwidth
2. Sweep time
3. Sweep width
4. Sweep offset (if any)
5. Spectrum amplification
6. Integral amplification

Note: When more than one black curve is present on the graph (offset and/or amplification) the readings for this supplemental data are reported immediately after those for the original curve and are separated by a slash, e.g.: spectrum amplification 20/40, the first number would pertain to the original curve while the second would pertain to the amplified portion.

D. Solvent and Concentration

E. Pertinent Remarks

INDICES

The indices furnished with this collection are as follows:

Alphabetical Index according to commercial name and chemical name cross-references.

Classification Index according to chemical type.

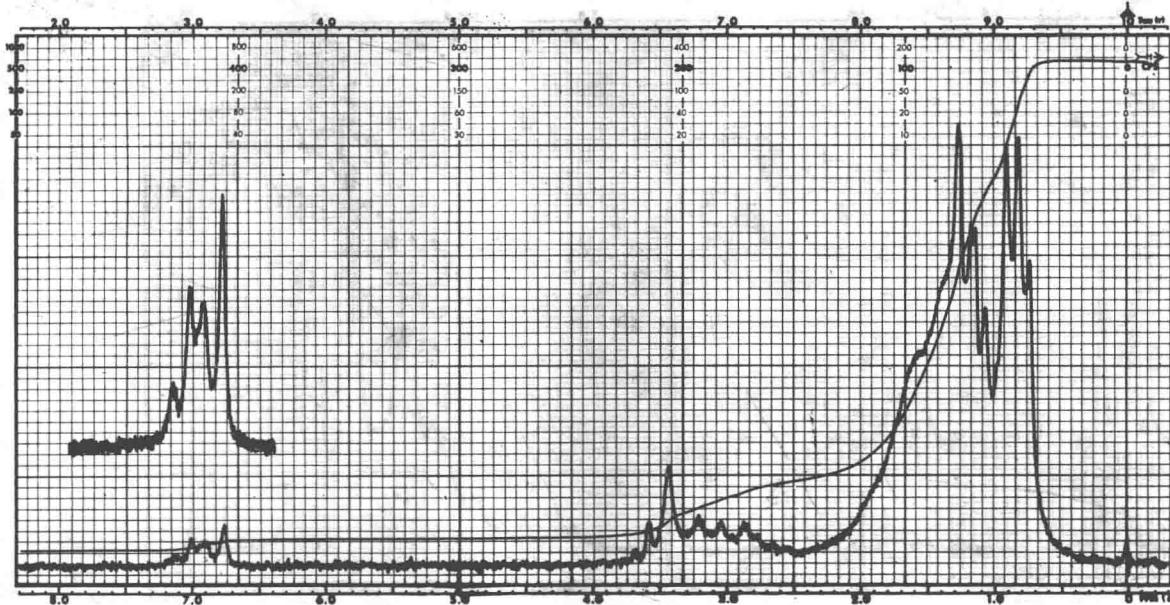

Numerical Index according to NMR Spectrum number.

Spec-Finder according to signal location and intensity.

The column of numbers entitled MFG CODE in the classification index refers to the code assigned to the manufacturer.

The three digit number in the column to the left of the compound name in the alphabetical index indicates the code assigned to the chemical class to which each product belongs. The infrared prism and grating spectrum numbers from the Sadtler Commercial Infrared Collection are also included in the indices. These codes will be useful to those using the other available spectra in conjunction with NMR. The titles and corresponding code numbers for the various types of plasticizers are listed below.

02	Abietic acid derivatives	44	Mellitic acid derivatives
04	Adipic acid derivatives	46	Myristic acid derivatives
06	Azelaic acid derivatives	50	Nitrile derivatives
08	Benzoic acid derivatives	52	Oleic acid derivatives
10	Biphenyl derivatives	54	Palmitic acid derivatives
12	Caprylic acid derivatives	56	Paraffins (Chlorinated)
14	Citric acid derivatives	58	Pelargonic acid derivatives
18	Epoxy derivatives	60	Pentaerythritol derivatives
20	Ether derivatives	61	Phenoxy derivatives
22	Ethylenediamine derivatives	62	Phosphoric acid derivatives
26	Formal derivatives	64	Phthalic acid derivatives
28	Fumaric acid derivatives	66	Polyesters
30	Glycerol derivatives	70	Ricinoleic acid derivatives
32	Glycol derivatives	72	Sebacic acid derivatives
34	Hydrocarbons	74	Stearic acid derivatives
36	Isobutyric acid derivatives	76	Styrene derivatives
38	Isophthalic acid derivatives	80	Sucrose derivatives
39	Lactams	82	Sulfonic acid derivatives
40	Lauric acid derivatives	99	Miscellaneous
42	Maleic acid derivatives
