***Dedicated to
Krista and Mark
Mark, Linda, Brad, Tim, Scott, and Lisa
Cathy, David, and Kristin***

The purpose of this seventh edition, as with previous editions, is to provide undergraduate and graduate students with a conceptual understanding of the role that quantitative methods play in the decision-making process. The text describes the many quantitative methods that have been developed over the years, explains how they work, and shows how the decision maker can apply and interpret them.

We have written this book with the nonmathematician in mind. It is applications oriented and uses the problem scenario approach. In each chapter a problem is described in conjunction with the quantitative procedure being introduced. The development of the quantitative technique or model includes applying it to the problem to generate a solution or recommendation. We have found that this approach helps to motivate the student by demonstrating not only how the procedure works, but also how it can contribute to the decision-making process.

The mathematical prerequisite for this text is a course in algebra. Two chapters on probability and probability distributions have been included to provide the necessary background for the use of probability in subsequent chapters.

Throughout the text we utilize generally accepted notation for the topic being covered. In this regard students who pursue study beyond the level of this text will have little difficulty reading more advanced material. To assist in further study, a bibliography is included in the backmatter of this book.

Changes in the Seventh Edition

In preparing the seventh edition we were careful to maintain the overall format and approach of the previous editions. However, based on our own classroom experience and suggestions from users of previous editions, we made several significant changes to enhance the content, organization, and readability of the text.

● **Simulation** Chapter 16 on simulation has been completely rewritten and modernized. The chapter begins with an application involving risk analysis and makes extensive use of spreadsheet output. An inventory simulation model and a waiting line simulation model are also covered. The use of spreadsheets has eliminated the dependence on using random number tables and performing simulation computations by hand. A chapter appendix shows how to use Microsoft Excel for simulation.

● **Markov Processes** At the request of several users we have added a new Chapter 17 on Markov processes. We show how Markov process models can be used to analyze the effect of brand switching behavior on market share and we show how to compute and interpret steady state probabilities. A section is included on using Markov processes with absorbing states for accounts receivable analysis.

● **The Management Scientist Version 4.0** The Management Scientist is a software package, developed by the authors, to solve most of the problems encountered in a quantitative methods course. Version 4.0 includes a graphical user interface and runs on Windows 95 and earlier versions of Windows. Easy to use dialog boxes and spreadsheets for data input make the system more user friendly.

● **More Emphasis on Applications and Managerial Interpretation** We have increased our emphasis on applications and the use of quantitative methods to solve real problems. Several quantitative methods in action vignettes have been added, new case problems have been added in integer programming and simulation, and several new spreadsheet appendixes have been added. Spreadsheet appendixes are now included for 11 chapters. However, the chapters themselves are not dependent on knowledge of any particular computer software.

Other Changes

With this edition we have dropped the chapter on the simplex method and the sections on special purpose algorithms for the transportation and assignment problems. With the wide availability of problem solving software, instructors are now able to de-emphasize algorithms and focus on managerial issues.

Many other changes, suggested by users, have been made. For example, a new problem scenario is used to introduce integer linear programming in Chapter 11. A number of student annotations have been added and about 10 percent of the problems are new to this edition.

Supplementary Materials

As has always been the case, this new edition of *QUANTITATIVE METHODS FOR BUSINESS* has ancillaries that will increase the value of the text to both students and instructors.

● **Study Guide** The *Study Guide* (ISBN: 0-538-87605-0) by John Loucks of St. Edward's University in Austin, Texas illustrates and reinforces the basic concepts of the text, and helps students organize text materials for review. Each chapter of the study guide includes illustrated problems that are worked out in full as well as problems for the student to do on his or her own. Answers are provided for these problems.

● **Solutions Manual** The *Solutions Manual* (ISBN: 0-538-87602-6) prepared by the text authors, includes solutions for all textbook problems, and Quantitative Methods in Practice questions. At the request of the instructor, the Solutions Manual can be packaged with the text.

● **The Management Scientist™** The *Management Scientist Version 4.0 for Windows™ and Windows® 95* (ISBN: 0-314-21646-4) provides 12 computer modules for working through the problems in the course. The software is class tested to run with little or no instructor supervision. Thorough documentation including examples of how to use the software on actual problems accompanies the IBM-compatible software. The software is available free to adopters as a site license; students may purchase the software packaged with the text for a small additional charge.

● **LINDO® 6.0 for Windows** The new Windows version of LINDO has been completely redesigned to make it more intuitive and easier to use. It has the familiar Windows graphical interface with drop-down menus, dialog boxes and a tool bar for frequently used commands. An educational version of LINDO 6.0 software (ISBN: 0-538-87829-0) is sold at a discounted price when it is packaged with the text.

● **Instructor's Manual and Demonstration Problems** The *Instructor's Manual* (ISBN: 0-538-87604-2), also prepared by the text authors, includes the topic for each end-of-chapter problem and the solutions to the case problems. Included with the manual are

transparency masters for fully worked demonstration problems that parallel examples and end-of-chapter problems in the text.

● **PowerPoint Presentation Files** Prepared by John Loucks of St. Edward's University, the PowerPoint presentation files (ISBN: 0-538-87607-7) contain a teaching outline that incorporates graphics to help professors create even more stimulating lectures. The Power Point 7.0 slides parallel the information provided in the Study Guide, and may be adapted using PowerPoint software to facilitate classroom use.

● **Test Bank and WESTEST™** The *Test Bank* (ISBN: 0-538-87603-4) by Constance McLaren of Indiana State University includes multiple choice, true-false, short answer, and computational problems for each chapter. The WESTEST (ISBN: 0-538-87608-5) computerized testing software allows instructors to create, edit, store and print exams.

Course Outline Flexibility

The text has been designed to give the instructor substantial flexibility in selecting topics to meet specific course needs. Although many variations are possible, the single-quarter and single-semester outlines that follow are illustrative of the options available.

- Possible One-Quarter Outline
 - Introduction (Chapter 1)
 - Decision Analysis (Chapters 4 and 5)
 - Linear Programming (Chapters 7, 8, and 9)
 - Transportation, Assignment, and Transshipment Problems (Chapter 10)
 - PERT/CPM (Chapter 12)
 - Waiting-Line Models (Chapter 15)
 - Simulation (Chapter 16)
- Possible One-Semester Outline
 - Introduction (Chapter 1)
 - Probability Concepts (Chapters 2 and 3)
 - Decision Analysis (Chapters 4 and 5)
 - Forecasting (Chapter 6)
 - Linear Programming (Chapters 7, 8, and 9)
 - Transportation, Assignment, and Transshipment Problems (Chapter 10)
 - Integer Linear Programming (Chapter 11)
 - PERT/CPM (Chapter 12)
 - Waiting-Line Models (Chapter 15)
 - Simulation (Chapter 16)

Many other possibilities exist for such a course, depending on course objectives and the student background.

Acknowledgments

We owe a debt to many of our colleagues and friends for their helpful comments and suggestions during the development of this and previous editions. Among these are Donald Adolphson, Shiv Kumar Aggarwah, E. Leonard Arnoff, Uttarayan Bagchi, Edward Baker, Norman Baker, Peter Barr, James Bartos, Stephen Beckett, Richard Beckwith, William Benoit, George Bohlen, Stanley Brooking, Randall Byers, Jeffrey Camm, Rodger D. Carlson, Thomas Case, Sohail Chaudhry, Dennis E. Drinka, John Eatman, Yar Ebadi, Ron Ebert, Margaret Eggers, Richard Ehrhardt, Candice Elliott, Peter Ellis, Lawrence Ettkin, Jim

Evans, Wade Ferguson, Edward Fox, John Flueck, Edward Fisher, Richard Flood, Robert Garfinkel, Roger Glaser, Fabienna Godlewski, Stephen Goodman, Jack Goodwin, Daniel Granor, Barry Griffin, Richard Gunther, Leland Gustafson, Ellie Hakak, Daniel G. Hotard, David Hott, Raymond Jackson, Edward Kao, Birsan Karpak, David Kelton, S. B. Khade, Rebecca Klemm, Bharat Kolluri, Andrew Lai, Darlene Lanier, John Lawrence, Jr., Charles Lienert, Constantine Loucopoulos, Phillip Lowery, Cynthia Ma, Barbara Mardis, T. Majtnay, Wiley Mangum, Prem Mann, R. Kipp Martin, Kamlesh Mathur, Joseph Mazzola, Richard McCready, Patrick McKeown, Constance McLaren, Edward Minieka, Alan Neebe, Susan Pariseau, Barnett Parker, David Pentico, Gary Pickett, Leonard Presby, Maurice Queyranne, Harold Rahmlow, B. Madhusudan Rao, Jeffrey L. Ringuest, Douglass Rippey, Richard Rosenthal, L. W. Shell, Wayland Smith, Jayavel Sounderpandian, Carol Stamm, Willban Terpening, Richard A. Toelle, Pitner Traughber, William Truscott, William Verdini, James Vigen, Leonard Volet, Craig Waring, Robert Winkler, Ed Winkofsky, Bruce Woodworth, M. Zafer Takin, Neba L'Abbe Wu, and Cathleen Zucco.

Our associates from organizations who supplied the Quantitative Methods in Practice applications made a major contribution to the text. These individuals are cited in a credit line on the first page of each application.

We are also indebted to our editors Alice Denny and John Szilagyi and others at South-Western College Publishing for their editorial counsel and support during the preparation of this text.

David R. Anderson
Dennis J. Sweeney
Thomas A. Williams

David R. Anderson. David R. Anderson is Professor of Quantitative Analysis in the College of Business Administration at the University of Cincinnati. Born in Grand Forks, North Dakota, he earned his B.S., M.S., and Ph.D. degrees from Purdue University. Professor Anderson has served as Associate Dean of the College of Business Administration. In addition, he was the coordinator of the College's first Executive Program.

At the University of Cincinnati, Professor Anderson has taught introductory statistics for business students as well as graduate level courses in regression analysis, multivariate analysis, and management science. He has also taught statistical courses at the Department of Labor in Washington, D.C. He has been honored with nominations and awards for excellence in teaching and excellence in service to student organizations.

Professor Anderson has coauthored six textbooks in the areas of statistics, management science, linear programming, and production and operations management. He is an active consultant in the field of sampling and statistical methods.

Dennis J. Sweeney. Dennis J. Sweeney is Professor of Quantitative Analysis at the University of Cincinnati. Born in Des Moines, Iowa, he earned a B.S.B.A. degree from Drake University, graduating summa cum laude. He received his M.B.A. and D.B.A. degrees from Indiana University where he was an NDEA Fellow. Since receiving his doctorate in 1971, Professor Sweeney has spent all but 2 years at the University of Cincinnati. During 1978–79, he spent a year working in the management science group at Procter & Gamble; during 1981–82, he was a visiting professor at Duke University. Professor Sweeney served 5 years as Head of the Department of Quantitative Analysis and 4 years as Associate Dean at the University of Cincinnati.

Professor Sweeney has published over 30 articles in the general area of management science. The National Science Foundation, IBM, Procter & Gamble, Federated Department Stores, and Cincinnati Gas & Electric have funded his research, which has been published in *Management Science*, *Operations Research*, *Mathematical Programming*, *Decision Sciences*, and other journals.

Professor Sweeney has coauthored six textbooks in the areas of statistics, management science, linear programming, and production and operations management.

Thomas A. Williams. Thomas A. Williams is Professor of Management Science in the College of Business at Rochester Institute of Technology. Born in Elmira, New York, he earned his B.S. degree at Clarkson University. He did his graduate work at Rensselaer Polytechnic Institute, where he received his M.S. and Ph.D. degrees.

Before joining the College of Business at RIT, Professor Williams served for 7 years as a faculty member in the College of Business Administration at the University of Cincinnati, where he developed the undergraduate program in Information Systems and then served as its coordinator. At RIT he was the first chairman of the Decision Sciences Department. He teaches courses in management science and statistics, as well as more advanced courses in regression and decision analysis.

Professor Williams is the coauthor of seven textbooks in the areas of management science, statistics, production and operations management, and mathematics. He has been a consultant for numerous Fortune 500 companies and has worked on projects ranging from the use of elementary data analysis to the development of large-scale regression models. His current research focuses on the application of total quality management in an academic setting.

Chapter 2 Introduction to Probability 29

2.1 Experiments and the Sample Space 30

2.2 Assigning Probabilities to Experimental Outcomes 31

Classical Method 32

Relative Frequency Method 32

Subjective Method 33

2.3 Events and Their Probabilities 33

2.4 Some Basic Relationships of Probability 34

Complement of an Event 34

Addition Law 35

Conditional Probability 38

Multiplication Law 42

2.5 Bayes' Theorem 43

The Tabular Approach 46

Quantitative Methods in Practice: Morton International 56

Chapter 3 Probability Distributions 59

- 3.1 Random Variables 60**
- 3.2 Discrete Random Variables 61**
 - The Probability Distribution of a Discrete Random Variable 61
 - Expected Value 63
 - Variance 64
- 3.3 The Binomial Distribution 65**
 - The Nastke Clothing Store Problem 66
 - The Expected Value and Variance for the Binomial Distribution 68
- 3.4 The Poisson Distribution 70**
 - An Example Involving Time Intervals 70
 - An Example Involving Length or Distance Intervals 71
- 3.5 Continuous Random Variables 72**
 - Applying the Uniform Distribution 72
 - Area As a Measure of Probability 74
- 3.6 The Normal Distribution 75**
 - The Standard Normal Distribution 77
 - Computing Probabilities for Any Normal Distribution 80
 - The Grear Tire Company Problem 82
- 3.7 The Exponential Distribution 85**
 - Computing Probabilities for the Exponential Distribution 85
 - Relationship between the Poisson and Exponential Distributions 86
- Appendix 3.1 Spreadsheets for Expected Value and Variance 94*
- Quantitative Methods in Practice: Xerox Corporation 96*

Chapter 4 Decision Analysis 99

- 4.1 Structuring the Decision Problem 100**
 - Payoff Tables 100
 - Decision Trees 101
- 4.2 Decision Making without Probabilities 102**
 - Optimistic Approach 102
 - Conservative Approach 103
 - Minimax Regret Approach 104
- 4.3 Decision Making with Probabilities 105**
- 4.4 Sensitivity Analysis 107**
- 4.5 Expected Value of Perfect Information 110**
- 4.6 Decision Analysis with Sample Information 112**
- 4.7 Developing a Decision Strategy 115**
 - Computing Branch Probabilities 116
 - An Optimal Decision Strategy 117
- 4.8 Expected Value of Sample Information 121**
 - Efficiency of Sample Information 121
- Case Problem Property Purchase Strategy 135*
- Appendix 4.1 Decision Analysis and Spreadsheets 137*
- Quantitative Methods in Practice: Ohio Edison Company 141*

Chapter 5 Utility and Decision Making 145

- 5.1 The Meaning of Utility 146**
- 5.2 Developing Utilities for Monetary Payoffs 147**
The Expected Utility Approach 150
- 5.3 Summary of Steps for Determining the Utility of Money 151**
- 5.4 Risk Avoiders Versus Risk Takers 152**
- 5.5 Expected Monetary Value Versus Expected Utility As an Approach to Decision Making 157**

Chapter 6 Forecasting 163

- 6.1 The Components of a Time Series 165**
Trend Component 165
Cyclical Component 166
Seasonal Component 167
Irregular Component 167
- 6.2 Using Smoothing Methods in Forecasting 167**
Moving Averages 168
Weighted Moving Averages 171
Exponential Smoothing 171
- 6.3 Using Trend Projection in Forecasting 176**
- 6.4 Using Trend and Seasonal Components in Forecasting 180**
The Multiplicative Model 180
Calculating the Seasonal Indexes 180
Deseasonalizing the Time Series 185
Using the Deseasonalized Time Series to Identify Trend 187
Seasonal Adjustments 188
Models Based on Monthly Data 189
Cyclical Component 189
- 6.5 Using Regression Analysis in Forecasting 189**
Using Regression Analysis when Time Series Data Are Not Available 189
Using Regression Analysis with Time Series Data 195
- 6.6 Qualitative Approaches to Forecasting 197**
Delphi Method 197
Expert Judgment 197
Scenario Writing 198
Intuitive Approaches 198
Case Problem Forecasting Sales 209
Case Problem Forecasting Lost Sales 210

Chapter 7	Linear Programming: The Graphical Method	219
7.1	A Simple Maximization Problem	220
7.2	The Objective Function	221
7.3	The Constraints	222
7.4	The Mathematical Statement of the RMC Problem	223
7.5	Graphical Solution	224
	A Note on Graphing Lines	235
	Summary of the Graphical Solution Procedure for Maximization Problems	236
	Slack Variables	237
7.6	Extreme Points and the Optimal Solution	239
7.7	A Simple Minimization Problem	242
	Summary of the Graphical Solution Procedure for Minimization Problems	243
	Surplus Variables	244
7.8	Special Cases	247
	Alternative Optimal Solutions	247
	Infeasibility	248
	Unbounded	249
7.9	Introduction to Sensitivity Analysis	251
7.10	Graphical Sensitivity Analysis	252
	Objective Function Coefficients	252
	Simultaneous Changes	257
	Right-Hand Sides	258
	<i>Case Problem Advertising Strategy</i>	275
	<i>Case Problem Production Strategy</i>	276
 Chapter 8	 Linear Programming: Formulation, Computer Solution, and Interpretation	 279
8.1	Computer Solution of Linear Programs	280
	Interpretation of Computer Output	280
	Simultaneous Changes	283
	Interpretation of Computer Output—A Second Example	284
	Cautionary Note on the Interpretation of Dual Prices	287
8.2	Linear Programs with More Than Two Decision Variables	288
	The Modified RMC Problem	288
	The Bluegrass Farms Problem	292
	Formulation of the Bluegrass Farms Problem	294
	Computer Solution and Interpretation for the Bluegrass Farms Problem	295
8.3	Modeling	297
	Guidelines for Model Formulation	297
	The Electronic Communications Problem	298
	Formulation of the Electronic Communications Problem	299
	Computer Solution and Interpretation for the Electronic Communications Problem	300

<i>Case Problem Product Mix</i>	319
<i>Case Problem Truck Leasing Strategy</i>	320
<i>Appendix 8.1 Solving Linear Programs with The Management Scientist</i>	321
<i>Appendix 8.2 Solving Linear Programs with LINDO®</i>	322
<i>Appendix 8.3 Spreadsheet Solution of Linear Programs</i>	324

Chapter 9 Linear Programming Applications 331

9.1 Marketing Applications	332
Media Selection	332
Marketing Research	335
9.2 Financial Applications	338
Portfolio Selection	339
Financial Planning	343
9.3 Production Management Applications	346
A Make-or-Buy Decision	346
Production Scheduling	351
Work-Force Assignment	357
9.4 Blending Problems	362
9.5 Data Envelopment Analysis	367
Evaluating the Performance of Hospitals	367
An Overview of the DEA Approach	369
The DEA Linear Programming Model	369
Summary of the DEA Approach	375
<i>Case Problem Environmental Protection</i>	390
<i>Case Problem Investment Strategy</i>	392
<i>Case Problem Textile Mill Scheduling</i>	393
<i>Appendix 9.1 Spreadsheet Solution of Linear Programs</i>	394
<i>Quantitative Methods in Practice: Marathon Oil Company</i>	397

Chapter 10 Transportation, Assignment, and Transshipment Problems 399

10.1 The Transportation Problem: The Network Model and a Linear Programming Formulation	400
Problem Variations	405
A General Linear Programming Model of the Transportation Problem	406
10.2 The Assignment Problem: The Network Model and a Linear Programming Formulation	407
Problem Variations	411
A General Linear Programming Model of the Assignment Problem	411
Multiple Assignments	411
10.3 The Transshipment Problem: The Network Model and a Linear Programming Formulation	412
Problem Variations	416
A General Linear Programming Model of the Transshipment Problem	418

10.4 A Production and Inventory Application	419
<i>Case Problem Assigning Umpire Crews</i>	437
<i>Case Problem Distribution System Design</i>	438
<i>Appendix 10.1 Spreadsheet Solution of Transportation and Assignment Problems</i>	440
<i>Quantitative Methods in Practice: Procter & Gamble</i>	445

Chapter 11 Integer Linear Programming 447

11.1 Types of Integer Linear Programming Models	448
11.2 Graphical and Computer Solution for an All-Integer Linear Program	449
Graphical Solution of the LP Relaxation	450
Rounding to Obtain an Integer Solution	450
Graphical Solution to the All-Integer Problem	452
A Note on the Use of the LP Relaxation Solution	453
Computer Solution	453
11.3 Applications Involving 0–1 Variables	454
Capital Budgeting	454
Fixed Cost	455
Distribution System Design	458
Bank Location	463
11.4 Modeling Flexibility Provided by 0–1 Integer Variables	467
Multiple-Choice and Mutually Exclusive Constraints	467
k Out of n Alternatives Constraint	468
Conditional and Corequisite Constraints	468
A Cautionary Note about Sensitivity Analysis	469
<i>Case Problem Textbook Publishing</i>	479
<i>Case Problem Production Scheduling with Changeover Costs</i>	480
<i>Appendix 11.1 Spreadsheet Solution of Integer Linear Programs</i>	481
<i>Quantitative Methods in Practice: Ketron</i>	485

Chapter 12 Project Scheduling: PERT/CPM 489

12.1 Project Scheduling with Known Activity Times	490
The Concept of a Critical Path	492
Determining the Critical Path	493
Contributions of PERT/CPM	498
Summary of the PERT/CPM Critical Path Procedure	499
12.2 Project Scheduling with Uncertain Activity Times	500
The Daugherty Porta-Vac Project	500
Uncertain Activity Times	500
The Critical Path	503
Variability in Project Completion Time	504
12.3 Considering Time–Cost Trade-Offs	508
Crashing Activity Times	509
A Linear Programming Model for Crashing Decisions	511
<i>Case Problem Warehouse Expansion</i>	524
<i>Quantitative Methods in Practice: Seasongood & Mayer</i>	527

Chapter 13	Inventory Management: Independent Demand	531
13.1	Economic Order Quantity (EOQ) Model	532
	The How-Much-to-Order Decision	536
	The When-to-Order Decision	537
	Sensitivity Analysis in the EOQ Model	538
	The Manager's Use of the EOQ Model	539
	How Has the EOQ Decision Model Helped?	540
	A Summary of the EOQ Model Assumptions	540
13.2	Economic Production Lot-Size Model	541
	The Total-Cost Model	542
	Finding the Economic Production Lot Size	544
13.3	An Inventory Model with Planned Shortages	544
13.4	Quantity Discounts for the EOQ Model	549
13.5	A Single-Period Inventory Model with Probabilistic Demand	551
	The Johnson Shoe Company Problem	552
	The Kremer Chemical Company Problem	555
13.6	An Order-Quantity, Reorder-Point Model with Probabilistic Demand	557
	The How-Much-to-Order Decision	559
	The When-to-Order Decision	559
13.7	A Periodic-Review Model with Probabilistic Demand	561
	More Complex Periodic-Review Models	564
	<i>Case Problem A Make-or-Buy Analysis</i>	574
	<i>Appendix 13.1 Inventory Models with Spreadsheets</i>	575
	<i>Appendix 13.2 Development of the Optimal Order-Quantity (Q) Formula for the EOQ Model</i>	578
	<i>Appendix 13.3 Development of the Optimal Lot-Size (Q^*) Formula for the Production Lot-Size Model</i>	579
	<i>Appendix 13.4 Development of the Optimal Order-Quantity (Q^*) and Optimal Backorder (S^*) Formulas for the Planned Shortage Model</i>	580
	<i>Quantitative Methods in Practice: Revco, Inc.</i>	582
Chapter 14	Inventory Management: Dependent Demand	585
14.1	Independent Versus Dependent Demand	586
14.2	Inputs to Material Requirements Plannings	588
	The Master Production Schedule	588
	The Bill of Materials	588
	The MRP Inventory Record	589
14.3	Determining Net Requirements	590
14.4	Lot Sizing and Safety Stock	592
14.5	MRP and a Time-phased Production Schedule	595
14.6	Implementing an MRP System	602
	Updating MRP Records	603
	Capacity Requirements Planning	603
14.7	Just-in-Time	604
