Table of Contents

Unit I - The St	tructure of mathematics	
Part A – Mathemat	tics as a Language	
LESSON 1	Mathematical Parts of Speech	1
LESSON 2	Mathematical Expressions	2
LESSON 3	Translation of Mathematical Symbols	5
Part B – Further Ii	nvestigation of Number Symbols	
LESSON 1	The Development of Our Number System	
LESSON 2	Fraction Forms and Decimal Forms	
LESSON 3	Changing Fraction Forms to Decimal Forms	12
LESSON 4	Changing Decimal Forms to Fraction Forms	
LESSON 5	Percent	17
LESSON 6	Primes, Composites, and Factoring	20
LESSON 7	Least Common Multiple	22
LESSON 8	Greatest Common Factor	24
Part C – Further I	nvestigation of Operation Symbols	
LESSON 1	Order of Operations	
LESSON 2	Properties of Operations	
LESSON 3	Properties of Operations with Special Numbers	
LESSON 4	Operations with Fraction Multiplication	34
LESSON 5	Operations with Fractions – Addition and Subtraction	37
LESSON 6	Operations with Fractions – Division	39
LESSON 7	Operations with Decimals	41
LESSON 8	Operations with Signed Numbers – Vectors and Absolute Value	44
LESSON 9	Operations with Signed Numbers – Addition	47
LESSON 10	Operations with Signed Numbers – Subtraction	51
LESSON 11	Operations with Signed Numbers – Multiplication and Division	53
Part D – Further I	nvestigation of Relation Symbols	
LESSON 1	Order of Numbers and the Number Line	57
LESSON 2	Properties of Equality	

LESSON 3

LESSON 1

LESSON 2

Part E – Mathematical Models

Unit II - First	Degree Relations with One Placeholder	
Part A – Basic Eq	uations and Inequalities	
LESSON 1	Solution Statements and Solution Sets	73
LESSON 2	First Type – Making Zeros	
LESSON 3	Second Type – Making Ones	
LESSON 4	Combinations	
Part B – Complic	ations on Equations and Inequalities	
LESSON 1	Grouping Symbols	87
LESSON 2	Like Terms on the Same Side	89
LESSON 3	Placeholders on Both Sides	91
LESSON 4	Combinations	94
Part C – Special (Cases of Equations and Inequalities	
LESSON 1	No Solution	96
LESSON 2	Infinite Number of Solutions	97
Part D – Systems	of Equations and Inequalities	
LESSON 1	Compound Sentences with "and"	99
LESSON 2	Compound Sentences with "or"	104
LESSON 3	Absolute Value Equal to a Positive Number (or)	108
LESSON 4	Absolute Value Less Than a Positive Number (and)	
LESSON 5	Absolute Value Greater Than a Non-Negative Number (or)	
Part E – Problem	Solving Using One Placeholder	
LESSON 1	General Strategy and Set Up	117
LESSON 2	"Number" Problems	
LESSON 3	"Consecutive Integer" Problems	123
LESSON 4	"Age" Problems	
LESSON 5	"Geometric Figure" Problems	
LESSON 6	"Motion" Problems	
LESSON 7	"Percent" Problems	
Unit III - Firs	t Degree Relations with Two Placeholder	S
Part A – Solution	Set For One Open Sentence	
LESSON 1	Solution Sets For Equations	141
LESSON 2	Solution Sets For Inequalities	
LESSON 3	Graphing Terminology	
LESSON 4	Graphing Techniques for $y = mx$	
LESSON 5	Graphing Techniques for $y = mx + b$	
LESSON 6	Graphing Techniques – Intercents	

Part B - Special C	Cases of Solution Sets	
LESSON 1	y = a, y < a, y > a	
LESSON 2	x = a, x < a, x > a	
LESSON 3	Absolute Value	172
Part C – Finding	Relations For Given Solution Sets	
LESSON 1	Given the Slope and y-Intercept	177
LESSON 2	Given the Slope and One Solution	
LESSON 3	Given Two Solutions	182
LESSON 4	Special Cases – Given Parallel or Perpendicular Lines	185
Part D – Solution	Sets for System of Two Open Sentences	
LESSON 1	Graphic Solution for Equations	188
LESSON 2	Graphic Solution for Inequalities	191
LESSON 3	Algebraic Solution for Equations – Elimination by Addition	194
LESSON 4	Algebraic Solution for Equations – Elimination by Substitution	199
Part E – Special (Cases of Solution Sets for Systems	
LESSON 1	No Solution Inconsistent	202
LESSON 2	Infinite Number of Solutions – Dependent	206
Part F – Problem	Solving Using Two Placeholders	
LESSON 1	General Strategy and Setup	210
LESSON 2	"Number" Problems	212
LESSON 3	"Age" Problems	215
LESSON 4	"Geometric Figure" Problems	218
LESSON 5	"Motion" Problems	222
LESSON 6	"Percent" Problems	226
LESSON 7	"Value" or "Mixture" Problems	230
Unit IV - Firs	at Degree Relations with Three	
or N	More Placeholders	
Part A – Solution	Sets	
LESSON 1	One Open Sentence	235
LESSON 2	Two Open Sentences	
LESSON 3	Systems of Three or More Open Sentences (Algebraic Solutions)	240
Part B – Special (Cases	
LESSON 1	No Solution – Inconsistent	242
LESSON 2	Infinite Number of Solutions – Dependent	244

Part C - Problem	Solving Using Three or More Placeholders	
LESSON 1	"Number" Problems	246
LESSON 2	"Age" Problems	
LESSON 3	"Geometric Figure" Problems	254
LESSON 4	"Value" or "Mixture" Problems	
Unit V - Seco	nd Degree Relations and Higher	
Part A – Exponent		
LESSON 1	Definitions and Terminology	263
LESSON 2	Operations with Powers	
LESSON 3	Extensions of Operations with Powers	
LESSON 4	Special Cases of Powers	
LESSON 5	Scientific Notation	
LLDDOIVS	Selentine 1 (classes)	
Part B – Polynomi	als	
LESSON 1	Algebraic Expressions	275
LESSON 2	Definition and Terminology	
LESSON 3	Operations – Addition and Subtraction	
LESSON 4	Operations-Multiplication	
LESSON 5	Operations-Division	
	- [
Part C – Solving E	Equations and Inequalities by Factoring	
LESSON 1	Principle of Zero-Products	288
LESSON 2	Special Products – Common Factor	
LESSON 3	Special Products – Difference of Squares	
LESSON 4	Special Products – Perfect Square Trinomial	
LESSON 5	Special Products – General Trinomial	
LESSON 6	Special Products – Four-Term Polynomial	
LESSON 7	Special Products – Sum or Difference of Cubes	
LESSON 8	General Factoring Strategy	
LESSON 9	Synthetic Division	
LESSON 10	Literal Equations	
223331110		
Part D – Problem	Solving with Higher-Order Relations	
LESSON 1	"Number" Problems	319
LESSON 2	"Consecutive Integer" Problems	
LESSON 3	"Geometric Figure" Problems	
LESSON 4	"Formula" Problems	

Unit VI - Algebraic Fractions

Part A – Operatio	ns	
LESSON 1	Simplifying	31
LESSON 2	Multiplication	34
LESSON 3	Division	36
LESSON 4	Addition and Subtraction	38
LESSON 5	Complex Forms	42
Don't D. Calvina	On our Court are a co	
Part B – Solving (11
LESSON 1	Equations – Arithmetic Case	
LESSON 2	Equations – Algebraic Case	
LESSON 3	Inequalities – Algebraic Case	
LESSON 4	Literal Equations	0.3
Part C – Problem	Solving with Algebraic Fractions	
LESSON 1	"Fraction" Problems	56
LESSON 2	"Work" Problems	60
LESSON 3	"Motion" Problems	62
LESSON 4	"Direct Variation" Problems	66
LESSON 5	"Inverse Variation" Problems	68
LESSON 6	"Mixed Variation" Problems	70
Unit VII - Rel	lations of Rational Number Degree	
	lations of Rational Number Degree Numbers as Exponents	
Part A - Rational	Numbers as Exponents	75

Unit I - The Structure of Mathematics

Part A - Mathematics as a Language

LESSON 1 Mathematical Parts of Speech

Objective: To identify the five parts of mathematical speech and understand their use.

Important Terms:

Number Symbols – more commonly called *numerals*, symbols used to represent quantities.

Operation Symbols – symbols such as + (add), – (subtract), \times (multiply) and \div (divide), used to indicate *action*.

Relation Symbols – symbols such as = (is equal to), > (is greater than), and < (is less than), used to show *comparisons*, as well as *combinations* such as \geq (is greater than or equal to), \geq (is less than or equal to), and the negations of all of these (\neq , \nearrow , \ll), among others.

Grouping Symbols – symbols such as () (parentheses), [] (brackets), and { } (braces), used to show *groupings*.

Placeholder Symbols – more commonly called *variables*, symbols such as a, b, c (letters of the alphabet) and \Box (empty boxes), used to hold the place of a number until the number has been identified.

Example 1: Tell which of the following are relation symbols:

- **a.** $17\frac{1}{2}$
- **b.** ≠
- c. >
- d. ÷

Solution:

- **a.** $17\frac{1}{2}$ is not a relation symbol. It is a number symbol meaning seventeen and one-half.
- **b.** ≠ is a relation symbol meaning "is *not* equal to."
- **c.** > is a relation symbol meaning "is greater than."
- **d.** ÷ is not a relation symbol. It is an operation symbol meaning "divide."

Lesson 1 - Exercises:

Tell what part of mathematical speech each of the following is, and state in words what each means.

8.
$$\sqrt{5}$$

15.
$$\frac{2}{3}$$

Part A - Mathematics as a Language

LESSON 2 Mathematical Expressions

Objective: To identify the four types of mathematical expressions and understand what to do with each.

Important Terms:

Closed Phrase – any mathematical expression which contains neither a relation symbol nor a placeholder symbol. For example, 2(5-1) is a closed phrase.

Open Phrase – any mathematical expression which contains a placeholder symbol but does not contain a relation symbol. For example, 6 + [3 - n] is an open phrase.

Closed Sentence – any mathematical expression which contains a relation symbol but does not contain a placeholder symbol. For example, 7(4-2) = 13 is a closed sentence.

Open Sentence – any mathematical expression which contains both a relation symbol and a placeholder symbol. For example, 9 + 2[n - 4] > 12 is an open sentence.

Identify the following mathematical expressions by looking for relation Example 1: symbols and placeholder symbols.

a.
$$17 - x$$

a.
$$17-x$$
 b. $16-(2\cdot 5)\geq 6$ **c.** $\frac{12+3}{2}$ **d.** $20=4(n-1)$

c.
$$\frac{12+3}{2}$$

d.
$$20 = 4(n-1)$$

Solution:

- a. Open Phrase Because there is no relation symbol, this expression is just a phrase. But there is a placeholder symbol, so the expression is open.
- **b.** Closed Sentence Because there is a relation symbol, this expression is a sentence. However, there is no placeholder symbol, so the expression is closed.
- c. Closed Phrase Because there is no relation symbol, this expression is just a phrase. Neither is there a placeholder symbol, so the expression is closed.
- **d.** Open Sentence There is a relation symbol, so the expression is a sentence. There is also a placeholder symbol, so the expression is open.

Example 2: Take the appropriate action for each of the following expressions. For open phrases, use a domain of $\{0, 1, 2\}$. For open sentences, use a replacement set of $\{4, 5, 6\}$.

a.
$$17 - x$$

a.
$$17-x$$
 b. $16-(2\cdot 5)\geq 6$ **c.** $\frac{12+3}{2}$ **d.** $20=4(n-1)$

c.
$$\frac{12+3}{2}$$

d.
$$20 = 4(n-1)$$

3

Solution:

a. Since this is an open phrase, the appropriate action is substitution from a domain and evaluation to a range.

Using $\{0, 1, 2\}$, we substitute and evaluate:

$$17 - (0) \rightarrow 17$$

$$17 - (1) \rightarrow 16$$

$$17 - (2) \rightarrow 15$$

So the range is {17, 16, 15}.

Example 2 cont'd:

b. This expression is a closed sentence, so what we can do is tell if it is true or false.

$$16 - (2 \cdot 5) \ge 6$$

 $16 - 10 \ge 6$
 $6 \ge 6$

Since 6 = 6 and that is one acceptable condition, the expression is true.

c. Since this is a closed phrase, what we can do is evaluate it.

$$\frac{12+3}{2} = \frac{15}{2} = 7\frac{1}{2}$$

Its value is $7\frac{1}{2}$.

d. This is an open sentence, so the appropriate action is to substitute from a replacement set and obtain a solution set of values that make the expression true. Using {4, 5, 6} we substitute and determine truth or falsehood.

$$20 = 4([4] - 1)$$
 $20 = 4([5] - 1)$ $20 = 4([6] - 1)$
= 4(3) = 4(4) = 4(5)
= 12 = 16 = 20
FALSE FALSE TRUE

So our solution set is {6}.

Lesson 2 - Exercises:

Tell whether each of the following expressions is an open phrase, closed phrase, open sentence, or closed sentence.

1.
$$6 + 8(3)$$

2.
$$m+2$$

3.
$$5-z=2$$

4.
$$8-2^3=4-2$$

5.
$$\frac{12+8}{5} > 2 \cdot 2$$

6.
$$w^2 - w$$

4

8.
$$\frac{15+18}{3} \neq 5+6$$

9.
$$3k + 11 < 17$$

10.
$$2 \cdot 4 - 1$$

In the following exercises, take the appropriate mathematical action with each expression. For open phrases, use a domain of $\{0, 1, 2\}$. For open sentences, use a replacement set of $\{4, 5, 6\}$.

1.
$$6 + 8(3)$$

2.
$$m+2$$

3.
$$5 - z = 2$$

4.
$$8-2^3=4-2$$

5.
$$\frac{12+8}{5} > 2 \cdot 2$$

6.
$$w^2 - w$$

8.
$$\frac{15+18}{3} \neq 5+6$$

9.
$$3k + 11 < 17$$

10.
$$2 \cdot 4 - 1$$

Part A - Mathematics as a Language

LESSON 3 Translation of Mathematical Symbols

Objective: To translate English expressions into expressions with mathematical symbols.

- **Example 1:** Translate the following English phrases into phrases with mathematical symbols.
 - **a.** The sum of m and 9 decreased by the product of 6 and y.
 - **b.** The quotient of the cube of x and the square of z.
- Solution:
- a. $\underbrace{\text{the sum of } m \text{ and } 9}_{(m+9)}$ $\underbrace{\text{decreased by}}_{=}$ $\underbrace{\text{the product of } 6 \text{ and } y}_{6 \cdot y}$

So (m + 9) - 6y is the desired phrase.

b. the quotient of the cube of
$$x$$
 and the square of z z^2

So $x^3 \div z^2$ or $\frac{x^3}{z^2}$ is the desired phrase.

Example 2: Translate the following English sentences into sentences with mathematical symbols.

- a. Six less than twice a number is 14.
- **b.** 58 is greater than the sum of 5 times a number and 18.

Solution:

a.
$$\underbrace{\text{six less than}}_{-6}$$
 $\underbrace{\text{twice a number}}_{2n}$ $\stackrel{\text{is}}{=}$ $\frac{14}{14}$

So 2n - 6 = 14 is the desired sentence.

Note that "six less than" means "subtract 6," so this must be placed to the **right** of 2n.

b.
$$\frac{58}{58}$$
 is greater than the sum of $\frac{5 \text{ times a number}}{5m}$ and $\frac{18}{18}$

So 58 > 5m + 18 is the desired sentence.

Lesson 3 - Exercises:

Translate the following English phrases into phrases with mathematical symbols.

- 1. The sum of q and 6, increased by 4.
- 3. 27 more than the total of x and y.
- **5.** The sum of a and b, divided by 6.
- 7. The product of 10 and z, decreased by the product of 8 and x
- **9.** The cube of *y*, subtracted from the product of 5 and *y*.
- **11.** The square of the difference of *y* and 9, divided by the product of 4 and *t*.
- **13.** The sum of 6 and b, combined with the total of 7 and c.
- **15.** The square of h divided by b less than the cube of j.

- **2.** The product of m and n, divided by 11.
- **4.** The difference between p and 8.
- **6.** *a* to the power of 6, increased by 12.
- **8.** *y* multiplied by 6, increased by the product of 5 and *z*.
- 10. The quantity x plus 5, times the quantity x minus 8.
- **12.** The difference between c and d, subtracted from the sum of q and r.
- **14.** The difference between the cube of v and the cube of w, divided by the square of e.
- **16.** 9 more than 4 times a number is equal to 55.

- 17. The result of 8 times a number decreased by 20 is the same as the sum of 4 times the number and 20.
- 18. Twice a number is 28.
- 19. 6 times a number decreased by 12 equals the sum of 3 times the number and 8.
- **20.** 150 is the same as 6 times a number decreased by 30.
- 21. The difference between 25 and 4 times a number is less than 100 more than 3 times the number.
- 22. 15 is the difference between one-fourth of a number and 12.
- **23.** Three times a number increased by 20 is greater than 56.
- 24. 14 more than 10 times a number is the same as the difference between 100 and 4 times the number.
- **25.** The sum of 5 times a number and 30 is less than or equal to 50.

Unit I - The Structure of Mathematics

Part B - Further Investigation of Number Symbols

LESSON 1 The Development of Our Number System

Objective: To identify the different types of numbers and understand how they are related

to each other.

Important Terms:

Well-Defined Operation – an operation which satisfies the conditions of *Existence* (must get an answer), *Uniqueness* (must get only one answer for each number combination), and *Closure* (answer must be in the set we are working in).

Natural Numbers – the numbers we use to count objects. The complete set of natural numbers is shown as {1, 2, 3, ...}, usually called "the set N." These numbers are also called counting numbers.

Whole Numbers – the natural numbers combined with the number 0. The complete set of whole numbers is shown as $\{0, 1, 2, 3, ...\}$ and usually called "the set W."

Integers – the whole numbers combined with all of their opposites. The complete set is shown as $\{..., -3, -2, -1, 0, 1, 2, 3, ...\}$.
