DRYING '86

PREFACE

It is a great personal pleasure and privilege for me to present these two volumes which constitute the formal Proceedings of the Fifth International Symposium on Drying (IDS'86) held on the campus of the Massachusetts Institute of Technology, Cambridge, MA, USA, August 13-15, 1986. As the Founder and continuing Program Chairman of the biennial International Drying Symposia Series, I am simply delighted with the positive reception and even acclaim which this series has earned worldwide over the past eight years. This has been possible only through the incessant and untiring efforts devoted by numerous individuals, professional and industrial organizations. Indeed, the number of those who contributed in some way or the other to the success of IDS'86 is so large that we have had to devote a separate section to acknowledge them individually in these volumes. If I have missed any names I wish to offer my apologies and assurance that the omission is inadvertent.

The significant growth in R&D activity related to drying and dewatering in the past decade was no doubt triggered by the energy crunch and the rising cost of energy. I hope that the recent fall in the world price of oil will not soften the industrial as well as academic interest in drying and dewatering technologies. Any dampening of such interest at this stage will be counter-productive in the long run. Furthermore, developments in drying technology are not always motivated by energy considerations alone but also by needs related to increased productivity, better product quality, safer and environmentally superior operation, new products and processes etc.

A quick glance at the contents of these volumes will show that all aspects, fundamental as well as applied, of drying of solids are covered. Continuing the tradition of earlier symposia in this series, the authors represent most parts of the world. For the first time, IDS'86 also covers such industrially significant areas as dewatering and R&D connected with humidity measurement technology which is vital to better control of drying processes.

International conferences and symposia have long been an integral part of the infra-structure of science, engineering and technology. The origin of this tradition may be traced back to the scholarly wanderings of European and Asian scholars centuries ago. Diffusion of knowledge across geographical as well as geo-political boundaries has had a very positive influence on the development of sciences as well as the arts for centuries. The growth of the scientific community and the increasing ease of travel have made it possible for more scientists to meet more often, define common goals, collaborate on problems of mutual interest, exchange ideas and research results both formally and informally, and above all, to create mutual trust and goodwill.

Despite the massive volunteer effort which goes into successful organization of any meeting -especially one with such extensive multidisciplinary character as the IDS - the cost of organization and attendance is high and hence must be justified. While it is relatively easy to state arguments in support of such meetings it is an order-of-magnitude difficult task to assess objectively their immediate and long-term value. As the founder/Chairman of the IDS series I am constantly concerned with this problem. One indirect indicator pointing to the value of the IDS meetings is the ever increasing numbers of abstracts submitted and participants, regardless of the location of the meeting in the world. A statistical evaluation of the technical programs and attendee lists shows that all IDS meetings have consistently met their objective of providing a truly international forum (20-35 nations represented at each meeting to date) for multidisciplinary and inter-industry scientific and engineering presentations. It is hoped that "cross-talk" between disciplines and various industries facing important drying problems will lead to increased productivity. IDS is designed to encourage and facilitate such cross-talk.

A recent evaluation of a successful, well-established series of scientific meetings has shown that the series met their immediate objectives in that they were international and multidisciplinary and provided a forum for participants to actively contribute to discussion (Ref. 1). A long-term positive outcome was the subsequent exchange of research material (60 per cent) and to the establishment of collaborative research projects (30 per cent). While these figures seem rather high, I feel that they are a true indicator of the success of the series.

-
1. Evered, D., Porter, Ruth and Nugent, Jonathan, International Scientific Meetings: Relation between Structure and Function, *British Medical Journal*, 291, 1028-1031 (1985).

I know that IDS has catalyzed several international collaborations in drying R&D – at least four such collaborations in my own case. I hope that participation in IDS series will lead to an overall increase in international, multidisciplinary collaborative projects.

The impact of international meetings can also be assessed by citation analysis. Unfortunately I do not have the necessary data. For the series mentioned earlier, citation analysis showed that the meeting proceedings were cited early, often and over a substantial period of time. It is my hope that the IDS proceedings have had and will continue to have a significant impact on the drying R&D community internationally. Perhaps a citation analysis in the years to come would be a worthwhile exercise.

It is my pleasure to note that IDS'88 and IDS'90 will be held in Versailles, France and Prague, Czechoslovakia respectively. IDS'88 will be held at Palais des Congres de Versailles, Versailles, September 6-8, 1988 with Dr. Michel A. Roques as the Symposium Chairperson. IDS'90 will be held in Prague in early September 1990 with Dr. Iva Filkova as the Symposium Chairperson.

Finally, I wish to record my sincere appreciation and gratitude to Professor Marcus Karel, IDS'86 Program Chairman, his efficient staff and colleagues at MIT for their enthusiastic effort to ensure success of this meeting. Aside from the members of the International advisory Panel, a large number of individuals have assisted us in the IDS'86 effort and, in particular, in the editing of these proceedings in a remarkably short time. They are (in random order): Mainul Hasan, Purnima Mujumdar, Anita Mujumdar, Suna Polat, Osman Polat, Laura Passos, Moses David and Victor Jariwala. The support of the professional societies and industrial organizations is acknowledged separately. My sincerest thanks go to all the Keynote Lecturers and all authors whose efforts have indeed resulted in this compendium which I hope will serve the drying community worldwide for years to come.

Arun S. Mujumdar
Editor
Montreal, Canada

ACKNOWLEDGEMENTS

The IDS'86 Program Chairmen gratefully acknowledge the active support and cooperation of the following professional societies, industrial organizations and members of the International Advisory Panel. Special thanks of course are due to distinguished Keynote Lecturers, authors of papers and session co-chairmen as well as the M.I.T. Conference Office without whose whole-hearted cooperation IDS'86 could not have been successful. We wish to record with appreciation the assistance of Sarah Boyer and Gayle Fitzgerald, both of M.I.T. Special Events Office, in the organization of IDS'86.

Volume I

Section I

Keynote Lectures

Advances in Transport Phenomena and Thermodynamics in the Drying of Cellular Food Systems - E. Rotstein, Argentina.-----	1
Electrical Methods for Drying - C. L. Lopez-Cacicedo, U. K.-----	12
A Finite Element Investigation into Heat and Mass Transfer in Porous Materials with Particular Reference to Ground Freezing - R. W. Lewis, W. K. Sze and P. M. Roberts, U. K. -----	22
Post-Filtration Processes and Their Impact on Drying - R. J. Wakeman, U. K.-----	30

Section II

Drying Theory and Modelling

Moisture Distribution During the Constant Rate Drying Period for Unconsolidated Porous Media : Failure of the Diffusion Theory - S. Chen and S. Whitaker, U. S. A.-----	39
A Simplified Calculation Method for the Isothermal Drying of Solid and Hollow Systems with any Degree of Shrinkage - W. J. Coumans and H. A. C. Thijssen, The Netherlands -----	49
A Multi-Dimensional Model Describing the Lyophilization of a Pharmaceutical Product in a Vial - M. M. Tang, A. I. Liapis and J. M. Marchello, U. S. A. -----	57
Simulation of the Convective Drying of Capillary-Porous Materials - A. C. Oliveira, A. C. and E. O. Fernandes, Portugal -----	65
Measured and Estimated Temperature in Convective and Conductive Drying of a Liquid Film - I. Sjöholm and B. Hallström, Sweden -----	71

Internal and Superficial Temperature of Solids During Drying - E. Wolff and J. J. Bimbenet, France -----	77
Diffusion Coefficient Based on the Assumption of Similar Concentration Distribution - Y. Sano, and S. Yamamoto, Japan -----	85
Modelling of the Drying of Refractory Concrete - G. Dhatt, M. Jacquemier and C. Kadje, France -----	94
Heat and Mass Transfer Predetermination Between a Drying Material and an External Flow - M. Prat, France -----	105
Analytical Prediction of Drying Rate Curves - V. Strongin and I. Borde, Israel -----	112
Moisture Diffusion in Synthetic Polymer filament Packed Beds - L. V. Albert and E. C. Macia, Spain -----	119
Computer Simulation of Adsorption Drying Processes - R. Hsieh, U. S. A. -----	127
Dynamic Model for Batch Drying of a Well-Stirred Bed of Solids- K. Viswanathan, M. S. Lyall and S. C. Dhingra, India -----	135
Modeling and Optimum Operating Conditions of a Through-Flow Dryer - W. Tanthapanichakoon, K. Phanaraya and T. Loychirakui - Thailand -----	142
An Exact Solution of the Sublimation Problem in a Porous Medium Accounting for the Effect of Coupled Heat and Mass Transfer - Y. Donghua and Y. Ding, China -----	149

Section III

Drying of Granular Materials

Contact Drying of Mechanically Agitated Particulate Material at the Presence of Inert Gas - E. Tsotsas, and E. U. Schlunder, F. R. G. -----	157
Hydrodynamic Similarity of Conventional and Vibrated Fluidized Beds - K. Erdesz (Hungary) , A. S. Mujumdar (Canada) and D. U. Ringer, F. R. G. -----	169
Drying of Paste-Like Materials in Vibro-Fluidized Bed of Inert Packing - K. Erdesz and Z. Ormos, U. S. A. -----	177
Spouting Behaviour of Wet Solids - K. Patel, J. Bridgwater, C. G. Baker and T. Schneider, U. K. -----	183
Analytic and Experimental Study for Accelerating and Decelerating Movement of Particles in Pneumatic Conveyer Dryer - G. Xu, China -----	190
Heat Transfer from Submerged Cylinder Moving in Granular Bed - T. Ohmori, M. Miyahara, M. Okazaki and R. Toei, Japan -----	197
Analysis of Simultaneous Drying and Coating of Tablets in a Spouted Bed - J. Kucharski and A. Kmiec, Poland -----	204

A Model for the Movement of Heat and Moisture in Stored Grains as a Result of Mold Respiration - E. A. Lissik and N. Latif, U. S. A. -----	218
Hybrid Drying of Coals by Combined Radiative and Convective Heating- M. Hasatani, Y. Itaya and K. Miura, Japan -----	227
Computer Control of Fluidized Bed Dryer with Varying Temperature Condition - V. Ravi, S. Sundaramoorthy and V. S. Ramachandra Rao, India -----	232
Vacuum Contact Drying of Particulate Material Wetted by Binary Mixtures - F. Heimann, and E. U. Schlunder, F. R. G. -----	238
A New Chemical Plating Method for the Measurement of the Effective Evaporating Area of a Heating Plate at the Bottom of a Packed Bed - T. Tachiwaki, T. Uchida, and H. Uyeha, Japan -----	251
Drying of Granulated Solids I - G. Jinescu and A. Iacobini, Romania -----	260
ITE Method for Determining Drying Kinetics of Solid Granular Materials - M. Stefanovic and S. Nesic -----	265
Multiobjective Optimization of Spouted Bed Drying - C. Strumillo, I. Zbicinski, S. Grabowski and A. Kraslawski, Poland -----	269

Section IV

Spray Drying

Drying of Liquid-Solid Slurry Droplets - N. Abuaf and F. W. Staub, U. S. A. -----	277
Spray Drying with Plasma-Heated Water Vapor - M. P. Amelot and W. H. Gauvin, Canada -----	285
The Experimental Study of Technical Parameters in Centrifugal Spray Drying Process - X. Ji-xuan and Z. Zeng-yan, China -----	291
The Use of a 'Low-NO _x ' Gas Burner for Direct Fired Heating of a Spray Drier During Milk Powder Manufacture - P. M. Kelly and J. I. Gray -----	297
A Mathematical Model for Countercurrent Spray Drying of Highly Concentrated and Superheated MAP Solution - W. Yuan and F. Jufu, China -----	305
Evaporation and Entropy Generation Histories of Atomized Spray of Non-Uniform Liquid Droplets in a Stream of Hot Gas - S. K. Som, India -----	314

Section V

Drying of Paper and Wood Products

Preliminary Design Study of a Combustion-Heated Impulse Dryer for Paper Drying - M. E. Nishtingale and F. W. Ahrens, U. S. A. -----	324
---	-----

Some Structural Effects on the Diffusional and Fluid Flow Frictional Resistance of Paper Webs Undergoing Hot-Surface Drying - J. A. Lehtinen, Finland -----	332
A Mathematical Model of High Intensity Paper Drying - J. R. Pounder and F. W. Ahrens, U. S. A.-----	341
MD/CD Shape Deviations of Yankee Dryer Shells - Causes and Cure - H. Holik, H. Brugger and B. Calaminus, F. R. G. -----	350
Drying of Paper : Measurement of Moisture Content - M. Rueff and R. Charuel, France -----	358
Density Development During Impulse Drying of Paper - S. W. Burton, C. H. Sprague and F. Ahrens, U. S. A.-----	364
Ambient Air Drying of Wood Chips in Thick Layers - G. Arnaud, and J. P. Fohr, France -----	371
Moisture Distribution During High Temperature Drying of Yellow Poplar - B. A. Adesanya, J. N. Beard, Jr. and A. K. Nanda, U. S. A.-----	375
A Theoretical Study of Drying : Numerical Simulations Applied to Clay-Brick and Softwood - P. Perre, S. B. Nasrallah and G. Arnaud, France -----	382
Adaptive Optimal Scheduling and Control of Batch Lumber Kilns Using a Population Balance Model - F. Kayihan, U. S. A.-----	391
The Effect of Kiln Drying on the Distribution of Paraffin Wax in Stained and Waxed Incense-Cedar Pencil Slats - K. Y. Wu and J. Lim, U. S. A. -----	401

Section VI

Drying of Foodstuffs and Biomaterials

Drying Characteristics of Minced Fish on Drum Dryers - K. H. Kim and W. Piyarat, Thailand -----	408
Transport Properties Measurement of Food Sample Undergoing Sublimation Dehydration - Y. Sagara, Japan -----	413
Cool Drying of a Milk Cream Type Product - E. H. Kubota and J. Cal-Vidal, Brazil -----	422
Enhanced Thermoresistance of Enzymes by Drying - B. G. Eduardo, A. M. Klibanov and M. Karel, U. S. A. -----	428
Atmospheric Freeze Drying : Design and Energy Consideration - E. Eolff, Ph. Louvet and H. Gibert, France -----	432
An Investigation on the Pressure Drop Characteristics and Primary Drying of Coconuts Using Forced Hot Circulation - R. Nampoorthirty, K. Gisuthan, G. Inayatullah and R. Ravikumar, India -----	440
Fluid Bed Drying of Grated Italian Cheese - M. Horikawa, T. Kudo, T. Fukushima and H. Hayashi, Japan -----	446
The Influence of Drying Conditions and Pretreatments on	

Permeability to Water of Grape Skin - M. Riva and P. Masi, Italy -----	454

Section VII

Drying of Agricultural Products and Grains

Rice Drying Simulation - L. R. Verma and A. Noomhorm, U. S. A. -----	461
Varietal Differences in High Temperature Drying of Maize in the Midwestern United States - R. L. Stroshine and J. Martins, U. S. A. -----	470
Experimental Measurement of Temperature and Moisture Profiles During Apple Drying - W. C. Chiang and J. N. Petersen, U. S. A. -----	479
Diffusivity of Moisture in Air-Drying of Raisins - G. D. Saravacos and G. S. Raouzeos, Stitzerland -----	487
* Moisture and Heat Transfer Modelling During Durum Wheat Pasta Drying - J. Andrieu and A. Stamatopoulos, France -----	492
Numerical Analyses on Drying Stresses of Brown Rice Kernel - S. Yamaguchi and K. Wakabayashi, Japan -----	499
Static Vertical Pressure of Grains on Slots (Air-Entry) in a Two-Dimensional Nonaerated Spouted Bed Grain Dryer - M. I. Kalwar, V. G. S. Raghavan and A. S. Mujumdar, Canada -----	506
Water Binding in the Apple Tissue During its Diffusive Processing - A. Lenart, P. P. Lewicki and Z. Palacha, Poland -----	515
Simultaneous Dehydration and Separation of Agricultural Pomaces in Fluidized Beds - L. Monroy, J. Segurajauregui and M. Vizcarra, Mexico -----	520
An Analysis of Sorrel (Hibiscus Sabdariffa) Drying and its Effect on Subsequent Processing - D. R. McGaw and I. Fraser, Trinidad -----	526
Corn Drying in Fluidized Bed - S. Ulku and G. Uckan, Turkey -----	531
Infrared Thermal Radiation Drying of Coffee Beans - S. Sanchez and J. Cervantes, Mexico -----	537

Continuous and Batch Spouted Bed Drying of Coffee Berries - O. Alves-Filho, Brazil -----	542
Simulation and Nomographic Representation of Energy Requirements in Fixed Deep Bed Drying of Paddy - M. Kulshreshtha, S. K. Mehara and S. Kumar, India -----	547
Molecular Sieves and Sand for Particulate Medium Drying of Corn - G. V. S. Raghavan and Z. Alikhani, Canada -----	553
Effects of Kernel Properties on Thin-Layer Drying of Shelled Corn - M. P. Levesque, L. Otten and G. E. Timbers, Canada -----	559
An Approach to the Choice of Crop Driers for Small Farmers in the Tropics - D. R. McGaw, O. St. C. Headley and C. K. Sankat, Trinidad -----	567

Section VIII

Superheated Steam Drying

Steam Drying of Wood Particles for Particleboard - J. G. Salin, Finland -----	572
Superheated Steam Drying of Paper : Effects on Physical Strength Properties - W. K. Cui, A. S. Mujumdar and W. J. M. Douglas, Canada -----	575
Flash Drying with Superheated Steam : A Mathematical Model - J. Meunier and R. Munz, Canada -----	580
A Techno-Economic Comparison of Air and Steam Drying - E. F. Faber, M. D. Heydenrych, R. U. I. Seppa and R. E. Hicks, South Africa -----	588
Modelling Tube to Bed Heat Transfer in Fluidized Bed Steam Drying - O. E. Potter and C. Beeby, Australia -----	595
Laminar Evaporation from Flat Surfaces into Unsaturated and Superheated Solvent Vapor - M. Hasan, A. S. Mujumdar and M. Al-Taleb, Canada -----	604

Section IX

Industrial Drying Systems and Novel Dryers

An Innovative Drying Process with Diverse Applications - K. A. Pluenncke and C. J. Crumm, U. S. A. -----	617
Aspects of New Dryer Selection - D. A. Lee, U. S. A. -----	625
Designing of Dryer in Tobacco Manufacturing Process - T. Ono and T. Yoshida, Japan -----	630
Effect of Drying on the Evolution and Combustion of Coal Volatiles - A. E. W. Gaissmaier and P. K. Agarwal, Australia -----	637

Safety Aspects of Fluid Bed Dryers - A. V. Naimpally, B. Sharifzadh and D. Saletore, U. S. A. -----	646
Some Safety Concerns for Operation at Elevated % LEL - G. F. Tiefenbruck, U. S. A.-----	651
Process Design in Fluidized Bed Drying - A. Hallstrom, Denmark -----	655
Design of Double Drum Direct Rotary Dryers - S. Bhattacharya and S. Chakladar, India -----	664

Section X

Use of Solar Energy in Drying

A Numerical Study of the Performance of Natural Convection Solar Rice Dryers - P. H. Oosthuizen, Canada -----	670
Construction, Simulation and Control of A Complex and Integrated Agricultural Solar Drying System - L. Imre, I. Farkas and L. Gemes, Hungary -----	678
A Large Scale Facility for Experimental Studies of Natural-Circulation Solar-Energy Tropical Crop Dryers - P. D. Fleming (U.K), B. Norton (U.K), O. V. Ekechukwu (Nigeria), S. C. Onyegegbu (Nigeria) and S. D. Probert, U. K. -----	685
Design and Testing of an Integrated Solar-Cum-Husk Fired Paddy Dryer of One Tonne Per Day Capacity - A. Chakraverty and S. K. Das, India -----	694

Section XI

Measurement and Control of Humidity and Moisture

Development of a Capacitive Dew Point Hygrometer for Process Drying - R. Sulouff, T. Randazzo and C. Gruber, U. S. A.-----	703
An Infrared Hygrometer to Measure the Water Vapor Mass Content of Conditioned Air in Drying Applications - R. Guzzi and G. Scalabrin, Italy -----	708
A New Contamination-Resistant Hygrometer for Industrial Dryers - M. E. Gersh, M. W. Matthew, F. Bien, L. S. Bernstein, and S. M. Adler-Golden, U. S. A.-----	712
Development of a High Temperature Dew-Point Measuring Apparatus Based on Differential Heat Flow Measurements - D. Rall, U. S. A.-----	719
Using Electrical Conductivity and Cross Correlation to Detect Fiber Saturation Point in Drying Lumber - R. A. Lessard and J. L. Hill, U. S. A.-----	726

Section XII

Dewatering

Control Scheme for Optimizati ^g Chemical Feed to Sludge Dewatering Processes - S. R. Srivatsa and W. M. Carlson, U. S. A. -----	733
Ekektrokinetic Dewatering Processes - P. Krishnaswamy and J. Bollinger, U. S. A. -----	737
Using UNIFAC to Predict Aroma Losses in Juice Concentration - S. G. Haralampu, U. S. A. -----	742
Foam Assisted Dewatering - D. S. Brookstein, J. Skelton, D. R. Patterson and F. Lauchenauer, Switzerland -----	747
Sludge Dewatering and Disposal Practices in the U. S. Pulp and Paper Industry - R. A. Miner, U. S. A. -----	752
Osmotic Dehydration of Fruit - V. Pavasovic, M. Stefanovic and R. Stevanovic, Yugoslavia. -----	761
Sludge Thickening and Dewatering by Dissolved Air Flotation : FLOATPRESS - M. Krofta and L. K. Wang, U. S. A. -----	765
Sludge Thickening and Dewatering by Dissolved Air Flotation : Process Design, M. Krofta and L. K. Wang, U. S. A. -----	772
Dewatering Dilute Fine Coal/Water Slurries to Produce Coal/Water Fuel - D. J. Maas, R. E. Sears and T. A. Potas, U. S. A.-----	781
Dewatering of Ultrafine Coal - S. X. Huang, G. E. Klinzing and S. H. Chiang, U. S. A.-----	790
The Andritz Approach to Continuous Press Filter Dewatering - G. L. Evans and B. Clements, U. S. A.-----	799

Section XIII

Selected Topics in Drying (Mostly Late Submissions)

Experimental Analysis of the Different Phases in the Drying of Natural Rubber - R. Auria and J. C. Benet, France -----	803
Air Drying in Packed Bed Absorbers - S. Ulku, Z. Kaivrak and M. Mobedi, Turkey -----	807
On the Study of Evaluating and Dehydrating an Automobile Air Conditioning System - J. P. Chiou, U. S. A. -----	813
Bouncing Motions of Drops and Particles Between Parallel-Plate Electrodes : A Preliminary Study on a New Scheme of Drying Augmentation - N. Kaji and Y. H. Mori, Japan -----	819
Simply Calculate the Thermal Parameters of Steam (Water Vapor) - X. L. Su and L. Y. Quan, China -----	828
Drying of Granular Materials Using a Geared Heat Pump - W. G. Cartwright and P. M. Hjianioniou, U. K. -----	831
Spray Drying and Competing Technologies in the Chemical Industry - K. G. Olsen and J. G. Holmes, U. S. A. -----	838
