Nanostructured Biomaterials for Overcoming Biological Barriers

RSC Drug Discovery Series

Editor-in-Chief

Professor David Thurston, London School of Pharmacy, UK

Series Editors:

Dr David Fox, *Pfizer Global Research and Development, Sandwich, UK* Professor Salvatore Guccione, *University of Catania, Italy* Professor Ana Martinez, *Instituto de Quimica Medica-CSIC, Spain* Professor David Rotella, *Montclair State University, USA*

Advisor to the Board:

Professor Robin Ganellin, University College London, UK

Titles in the Series:

- 1: Metabolism, Pharmacokinetics and Toxicity of Functional Groups
- 2: Emerging Drugs and Targets for Alzheimer's Disease; Volume 1
- 3: Emerging Drugs and Targets for Alzheimer's Disease; Volume 2
- 4: Accounts in Drug Discovery
- 5: New Frontiers in Chemical Biology
- 6: Animal Models for Neurodegenerative Disease
- 7: Neurodegeneration
- 8: G Protein-Coupled Receptors
- 9: Pharmaceutical Process Development
- 10: Extracellular and Intracellular Signaling
- 11: New Synthetic Technologies in Medicinal Chemistry
- 12: New Horizons in Predictive Toxicology
- 13: Drug Design Strategies: Quantitative Approaches
- 14: Neglected Diseases and Drug Discovery
- 15: Biomedical Imaging
- 16: Pharmaceutical Salts and Cocrystals
- 17: Polyamine Drug Discovery
- 18: Proteinases as Drug Targets
- 19: Kinase Drug Discovery
- 20: Drug Design Strategies: Computational Techniques and Applications
- 21: Designing Multi-Target Drugs
- 22: Nanostructured Biomaterials for Overcoming Biological Barriers

How to obtain future titles on publication:

A standing order plan is available for this series. A standing order will bring delivery of each new volume immediately on publication.

Preface

The book *Nanostructured Biomaterials for Overcoming Biological Barriers* provides a terrific summary of how nanostructures can be helpful in the biomedical area. It starts with a historical perspective and then goes over how nanostructures can be used to overcome different barriers in the body. Such barriers include the intestinal barrier, the nasal barrier, the ocular barrier, the pulmonary barrier, the skin barrier and finally the blood brain barrier. In each case the book is very well organized with chapters in each section going over physiological considerations and mechanistic issues followed by various formulation strategies for delivering specific types of molecules. For example, in the section for nanostructures for overcoming the intestinal barrier, oral vaccines are considered and the same is true for the section on nasal barriers. In the sections for the ocular, pulmonary, skin and blood-brain barriers; drugs, including large molecular weight drugs, are primarily discussed.

The book continues by going over how nanostructures can overcome biological barriers related to parenteral drug delivery. Here the idea of using lipid nanocapsules for parenteral drug delivery is discussed as well as how one can overcome biological barriers with parenteral nanomedicines. Finally parenteral drug delivery using polymers is evaluated.

The next chapters go over biological barriers to tissue engineering and specifically discuss physiological and mechanistic issues as well as drug delivery related to this field. Next, regulatory issues such as nanotoxicology are reviewed. This is an important area that scientists want to understand more about for the practical use of nanomedicines. Finally, a clinically relevant case study by Bioalliance Pharma is presented and the book is tied together with thoughtful closing remarks.

RSC Drug Discovery Series No. 22 Nanostructured Biomaterials for Overcoming Biological Barriers Edited by Maria Jose Alonso and Noemi S. Csaba © The Royal Society of Chemistry 2012 Published by the Royal Society of Chemistry, www.rsc.org vi Preface

Overall, the book provides a very good understanding of the biological barriers and discusses the most innovative current approaches to overcome these barriers through the use of nanotechnologies and biomaterials.

Robert S. Langer Department of Chemical Engineering, Massachusetts Institute of Technology, Cambridge, USA

Chapter 8.3	Drug Del	ivery Strategies: Lipid Nanocapsules	483
	G. Bastia	t, S. Hirsjärvi and J. P. Benoit	
	8.3.1	Introduction	483
	8.3.2	Easy and Safe Method for the Formulation of	40.4
	0.2.2	Lipid Nanocapsules	484
	8.3.3	Lipid Nanocapsules and Blood Circulation 8.3.3.1 Unmodified LNCs and Blood	486
		Circulation	486
		8.3.3.2 Modified LNCs and Blood	100
		Circulation	487
	8.3.4	Lipid Nanocapsules and Cellular Uptake	488
		8.3.4.1 P-glycoprotein Inhibition	488
		8.3.4.2 Cellular Trafficking	489
	8.3.5	Lipid Nanocapsules and Passive Targeting vs.	
		Active Targeting.	490
		8.3.5.1 Passive Targeting and the EPR Effect	490
		8.3.5.2 Active Targeting and Crossing the	
		Blood-Brain Barrier	492
	8.3.6	Lipid Nanocapsules and Cancer Therapy: an	
	0.2.7	Orthotopic Hepatocarcinoma Model	492
	8.3.7	Lipid Nanocapsules and Inner Ear Diseases	494
	8.3.8 Refere		495
	Refere	nces	496
Section	ı 9 Dru	g Delivery in Tissue Engineering	
Chapter 9.1		very in Tissue Engineering: General Concepts	501
		Yarza, E. Garbayo, E. Tamayo, F. Prósper and nco-Prieto	
	9.1.1	Tissue Engineering: Definition and Objectives	501
		9.1.1.1 Cell Sources in Tissue Engineering	503
		9.1.1.2 Bioactive Molecules in Tissue	
		Engineering	504
		9.1.1.3 Scaffolds in Tissue Engineering	505
