Preface

The third edition of *Intermediate Algebra: An Applied Approach* provides mathematically sound and comprehensive coverage of the topics considered essential in an intermediate algebra course. Our strategy in preparing this revision has been to build on the successful features of the second edition, features designed to enhance the student's mastery of math skills. In addition, we have expanded the ancillary package for both the instructor and the student by adding transparencies and videos.

Features

The Interactive Approach

Instructors have long recognized the need for a text that requires the student to use a skill as it is being taught. *Intermediate Algebra: An Applied Approach* uses an interactive technique that meets this need. Each section is divided into objectives, and every objective contains one or more sets of matched-pair examples. The first example in each set is worked out; the second example is not. By solving this second problem, the student interacts with the text. The complete worked-out solutions to these examples are provided in an appendix at the end of the book, so the student can obtain immediate feedback on and reinforcement of the skill being learned.

Emphasis on Problem-Solving Strategies

Intermediate Algebra: An Applied Approach features a carefully developed approach to problem solving that emphasizes developing strategies to solve problems. For each type of word problem contained in the text, the student is prompted to use a "strategy step" before performing the actual manipulation of numbers and variables. By developing problem-solving strategies, the student will know better how to analyze and solve those word problems encountered in an intermediate algebra course.

Applications

The traditional approach to teaching or reviewing algebra covers only the straightforward manipulation of numbers and variables and thereby fails to teach students the practical value of algebra. By contrast, *Intermediate Algebra: An Applied Approach* emphasizes applications. Wherever appropriate, the last objective in each section presents applications that require the student to use the skills covered in that section to solve practical problems. Also, most of Chapter 2, "First-Degree Equations and Inequalities," and portions of several other chapters are devoted entirely to applications. This carefully integrated applied approach generates awareness on the student's part of the value of algebra as a real-life tool.

Complete Integrated Learning System Organized by Objectives

Each chapter begins with a list of the learning objectives included within that chapter. Each of the objectives is then restated in the chapter to remind the student of the current topic of discussion. The same objectives that organize the

text organize each ancillary. The Solutions Manual, Computerized Test Generator, Computer Tutor™, Videos, Transparencies, Test Bank, and the Printed Testing Program have all been prepared so that both the student and instructor can easily connect all of the different aids.

Exercises

There are more than 6000 exercises in the text, grouped in the following categories:

- **End-of-section exercise sets**, which are keyed to the corresponding learning objectives, provide ample practice and review of each skill.
- **Chapter review exercises**, which appear at the end of each chapter, help the student integrate all of the skills presented in the chapter.
- **Chapter tests**, which appear at the end of each chapter, are typical one-hour exams that the student can use to prepare for an in-class test.
- **Cumulative review exercises**, which appear at the end of each chapter (beginning with Chapter 2), help the student retain math skills learned in earlier chapters.
- **Final exam**, which follows the last chapter, can be used as a review item or practice final.
- **Calculator exercises**, which appear in the end-of-section exercises, are included throughout the text. These exercises provide the student with the opportunity to practice using a hand-held calculator and are identified by a special color box printed over the exercise number for each calculator exercise.

Calculator and Computer Enrichment Topics

Each chapter also contains optional calculator or computer enrichment topics. Calculator topics provide the student with valuable key-stroking instructions and practice in using a hand-held calculator. Computer topics correspond directly to the programs found on the Math ACE (Additional Computer Exercises) Disk. These topics range from solving first-degree equations to graphing linear equations in two variables.

New To This Edition

Topical Coverage

Chapter 1, a review of the real numbers, has been condensed.

The chapter on *Linear Equations in Two Variables* has been moved to precede Chapter 7, *Quadratic Equations*, to better connect the graphing skills developed in each chapter.

In Chapter 4, negative exponents are introduced before division of monomials. With this change, a single rule for division of monomials can be stated.

The coverage of factoring has been expanded to include the ac method of factoring as an alternative to factoring by using trial factors.

Coverage of conic sections has been increased. Chapter 8, *Graphing Functions and Relations*, has been broken up into two chapters, *Functions and Relations* and *Conic Sections*. This material has been greatly expanded in the Third Edition.

Keeping with our commitment to applications, over two hundred word problems have been rewritten to reflect contemporary situations.

Chapter Review and Chapter Test

There is now a Chapter Review and a Chapter Test at the end of each chapter. Problems in the Chapter Review are grouped according to the section heads for that chapter. Problems in the Chapter Test are not divided into sections or objectives. Instead, the objective references are given in the Answer Section at the back of the book so the student will know which objective to restudy if necessary.

New Testing Program

Both the Computerized Testing Program and the Printed Testing Program have been completely rewritten to provide instructors with the option of creating countless new tests.

Supplements For The Student

Two computerized study aids, the Computer Tutor™ and the Math ACE (Additional Computer Exercises) Disk have been carefully designed for the student. The Computer Tutor™ has been expanded to include nine “you-try-it” examples with specific help screens for each lesson.

The COMPUTER TUTOR™

The Computer Tutor™ is an interactive instructional microcomputer program for student use. Each learning objective in the text is supported by a lesson on the Computer Tutor™. As a reminder of this, a small computer icon appears to the right of each objective title in the text. Lessons on the tutor provide additional instruction and practice and can be used in several ways: (1) to cover material the student missed because of absence from class; (2) to repeat instruction on the skill or concept that the student has not yet mastered; or (3) to review material in preparation for examinations. This tutorial program is available for the IBM PC and compatible computers.

Math ACE (Additional Computer Exercises) Disk

The Math ACE Disk contains a number of computational and drill-and-practice programs that correspond to selected Calculator and Computer Enrichment Topics in the text. These programs are available for the IBM PC and compatible computers.

Supplements For The Instructor

Intermediate Algebra: An Applied Approach has an unusually complete set of teaching aids for the instructor.

Instructor's Annotated Edition

The Instructor's Annotated Edition is an exact replica of the student text except that the answers to all of the exercises are printed in color next to the problems.

Solutions Manual

The Solutions Manual contains worked-out solutions for all end-of-section exercise sets, chapter reviews, chapter tests, cumulative reviews, and the final exam.

Instructor's Resource Manual/Testing Program

The Instructor's Resource Manual/Testing Program contains the printed testing program, which is the first of three sources of testing material available to users of *Intermediate Algebra: An Applied Approach*. Eight printed tests (in two formats—free response and multiple choice) are provided for each chapter, as are cumulative and final exams. In addition, the Instructor's Manual includes the documentation for all the software ancillaries (ACE, the Computer Tutor, and the Instructor's Computerized Test Generator) as well as suggested course sequences and class assignments.

Instructor's Computerized Test Generator

The Instructor's Computerized Test Generator is the second source of testing material for use with *Intermediate Algebra: An Applied Approach*. The database contains over 1900 new test items. These questions are unique to the test generator and do not repeat items provided in the Instructor's Resource Manual/Testing Program. Organized according to the keyed objectives in the text, the Test Generator is designed to produce an unlimited number of tests for each chapter of the text, including cumulative tests and final exams. It is available for the IBM PC or compatible computers with editing capabilities for all non-graphic questions.

Printed Test Bank

The Printed Test Bank, the third component of the testing materials, is a print-out of all items in the Instructor's Computerized Test Generator. Instructors using the Test Generator can use the test bank to select specific items from the database. Instructors who do not have access to a computer can use the test bank to select items to be included on a test being prepared by hand.

Videotapes

Approximately 50 half-hour videotape lessons accompany *Intermediate Algebra: An Applied Approach*. These lessons follow the format and style of the text and are closely tied to specific sections of the text.

Transparencies

Approximately 250 transparencies accompany *Intermediate Algebra: An Applied Approach*. These transparencies contain the complete solution to every "you-try-it" example in the text.

To the Student

Many students feel that they will never understand math while others appear to do very well with little effort. Oftentimes what makes the difference is that successful students take an active role in the learning process.

Learning mathematics requires your *active* participation. Although doing homework is one way you can actively participate, it is not the only way. First, you must attend class regularly and become an active participant. Secondly, you must become actively involved with the textbook.

Intermediate Algebra: An Applied Approach was written and designed with you in mind as a participant. Here are some suggestions on how to use the features of this textbook.

There are 12 chapters in this text. Each chapter is divided into sections and each section is subdivided into learning objectives. Each learning objective is labeled with a letter from A–E.

First, read each objective statement carefully so you will understand the learning goal that is being presented. Next, read the objective material carefully, being sure to note each bold word. These words indicate important concepts that you should familiarize yourself with. Study each in-text example carefully, noting the techniques and strategies used to solve the example.

You will then come to the key learning feature of this text, the *boxed examples*. These examples have been designed to aid you in a very specific way. Notice that in each example box, the example on the left is completely worked out and the example on the right is not. The reason for this is that *you* are expected to work the right-hand example (in the space provided) in order to immediately test your understanding of the material you have just studied.

You should study the worked-out example carefully by working through each step presented. This allows you to focus on each step and reinforces the technique for solving that type of problem. You can then use the worked-out example as a model for solving similar problems.

Then you should solve the right-hand example using the problem-solving techniques that you have just studied. When you have completed your solution, check your work by turning to the page in the appendix where the complete solution can be found. The page number on which the solution appears is printed at the bottom of the example box in the right-hand corner. By checking your solution, you will know immediately whether or not you fully understand the skill you just studied.

When you have completed studying an objective, do all of the exercises in the exercise set that correspond with that objective. The exercises will be labeled with the same letter as the objective. Algebra is a subject that needs to be learned in small sections and practiced continually in order to be mastered. Doing all of the exercises in each exercise set will help you master the problem-solving techniques necessary for success.

Once you have completed the exercises to an objective, you should check your answers to the odd-numbered exercises with those found in the back of the book.

After completing a chapter, read the Chapter Summary. This summary highlights the important topics covered in the chapter. Following the Chapter Summary are Chapter Review Exercises, a Chapter Test, and a Cumulative Review (beginning with Chapter 2). Doing the review exercises is an important way of testing your understanding of the chapter. The answer to each review exercise is in an appendix at back of the book. Each answer is followed by a reference that tells which objective that exercise was taken from. For example, (4.2B) means Section 4.2, Objective B. After checking your answers, restudy any objective that you missed. It may be very helpful to retry some of the exercises for that objective to reinforce your problem-solving techniques.

The Chapter Test should be used to prepare for an exam. We suggest that you try the Chapter Test a few days before your actual exam. Take the test in a quiet place and try to complete the test in the same amount of time you will be allowed for your exam. When taking the Chapter Test, practice the strategies of successful test takers: 1) scan the entire test to get a feel for the questions; 2) read the directions carefully; 3) work the problems that are easiest for you first; and perhaps most importantly, 4) try to stay calm.

When you have completed the Chapter Test, check your answers. If you missed a question, review the material in that objective and rework some of the exercises from that objective. This will strengthen your ability to perform the skills in that objective.

The Cumulative Review allows you to refresh the skills you have learned in previous chapters. This is very important in mathematics. By consistently reviewing previous materials, you will retain the previous skills as you build new ones.

Remember, to be successful, attend class regularly; read the textbook carefully; actively participate in class; work with your textbook using the boxed examples for immediate feedback and reinforcement of each skill; do all the homework assignments; review constantly; and work carefully.

Contents

Preface *xiii*

1 Review of Real Numbers *1*

SECTION 1.1 Operations on the Integers *3*

- Objective A** To find the absolute value and the additive inverse of a number *3*
Objective B To add, subtract, multiply, and divide integers *4*
Objective C To evaluate exponential expressions *6*

SECTION 1.2 Operations on the Real Numbers *9*

- Objective A** To add, subtract, multiply, and divide rational numbers *9*
Objective B To use the Order of Operations Agreement to simplify expressions *12*

SECTION 1.3 Variable Expressions *17*

- Objective A** To evaluate a variable expression *17*
Objective B To use and identify the Properties of the Real Numbers *18*
Objective C To simplify a variable expression *20*
Objective D To translate a verbal expression into a variable expression and then simplify the resulting expression *21*

SECTION 1.4 Sets *27*

- Objective A** To find the union and intersection of sets *27*
Objective B To graph the solution set of an inequality in one variable *29*
Calculators and Computers 33; Chapter Summary 34;
Chapter Review 37; Chapter Test 39

2 First-Degree Equations and Inequalities *41*

SECTION 2.1 Solving First-Degree Equations *43*

- Objective A** To solve an equation using the Addition or the Multiplication Property of Equations *43*
Objective B To solve an equation using both the Addition and Multiplication Properties of Equations *46*
Objective C To solve an equation containing parentheses *47*

SECTION 2.2 First-Degree Inequalities *53*

- Objective A** To solve an inequality in one variable *53*
Objective B To solve a compound inequality *56*
Objective C To solve application problems *58*

SECTION 2.3 Absolute Value Equations and Inequalities *65*

- Objective A** To solve an absolute value equation *65*
Objective B To solve an absolute value inequality *67*
Objective C To solve application problems *69*

SECTION 2.4	Applications: Puzzle Problems	75
	Objective A To solve integer problems	75
	Objective B To solve coin and stamp problems	77
SECTION 2.5	Applications: Value Mixture and Uniform Motion Problems	81
	Objective A To solve value mixture problems	81
	Objective B To solve uniform motion problems	83
SECTION 2.6	Applications: Problems Involving Percent	87
	Objective A To solve investment problems	87
	Objective B To solve percent mixture problems	89
	<i>Calculators and Computers</i>	93;
	<i>Chapter Summary</i>	93;
	<i>Chapter Review</i>	95;
	<i>Chapter Test</i>	97;
	<i>Cumulative Review</i>	99

3 Polynomials 101

SECTION 3.1	Operations on Polynomials	103
	Objective A To add or subtract polynomials	103
	Objective B To multiply monomials	105
	Objective C To divide monomials and simplify expressions containing integer exponents	108
	Objective D To write a number using scientific notation	112
	Objective E To solve application problems	114
SECTION 3.2	Multiplication of Polynomials	121
	Objective A To multiply a polynomial by a monomial	121
	Objective B To multiply two polynomials	122
	Objective C To multiply polynomials that have special products	124
	Objective D To solve application problems	125
SECTION 3.3	Factoring Polynomials	131
	Objective A To factor a monomial from a polynomial	131
	Objective B To factor by grouping	132
	Objective C To factor a trinomial of the form $x^2 + bx + c$	133
	Objective D To factor $ax^2 + bx + c$	135
SECTION 3.4	Special Factoring	143
	Objective A To factor the difference of two perfect squares or a perfect square trinomial	143
	Objective B To factor the sum or the difference of two cubes	145
	Objective C To factor a trinomial that is quadratic in form	146
	Objective D To factor completely	147
SECTION 3.5	Solving Equations by Factoring	153
	Objective A To solve an equation by factoring	153
	<i>Calculators and Computers</i>	157;
	<i>Chapter Summary</i>	157;
	<i>Chapter Review</i>	159;
	<i>Chapter Test</i>	161;
	<i>Cumulative Review</i>	163

4 Rational Expressions 165

SECTION 4.1	Multiplication and Division of Rational Expressions	167
	Objective A To simplify a rational expression	167
	Objective B To multiply rational expressions	169
	Objective C To divide rational expressions	170

SECTION 4.2	Division of Polynomials	175
	Objective A To divide polynomials	175
	Objective B To divide polynomials by using synthetic division	177
SECTION 4.3	Addition and Subtraction of Rational Expressions	181
	Objective A To rewrite rational expressions in terms of a common denominator	181
	Objective B To add or subtract rational expressions	183
SECTION 4.4	Complex Fractions	189
	Objective A To simplify a complex fraction	189
SECTION 4.5	Ratio and Proportion	193
	Objective A To solve a proportion	193
	Objective B To solve application problems	194
SECTION 4.6	Rational Equations	197
	Objective A To solve a fractional equation	197
	Objective B To solve a literal equation for one of the variables	198
	Objective C To solve work problems	199
	Objective D To solve uniform motion problems	201
	<i>Calculators and Computers</i>	209;
	<i>Chapter Summary</i>	209;
	<i>Chapter Review</i>	211;
	<i>Chapter Test</i>	213;
	<i>Cumulative Review</i>	215

5 Exponents and Radicals 217

SECTION 5.1	Rational Exponents and Radical Expressions	219
	Objective A To simplify expressions with rational exponents	219
	Objective B To write exponential expressions as radical expressions and to write radical expressions as exponential expressions	221
	Objective C To simplify expressions of the form $\sqrt[n]{a^n}$	223
SECTION 5.2	Operations on Radical Expressions	229
	Objective A To simplify radical expressions	229
	Objective B To add or subtract radical expressions	231
	Objective C To multiply radical expressions	232
	Objective D To divide radical expressions	234
SECTION 5.3	Complex Numbers	241
	Objective A To simplify a complex number	241
	Objective B To add or subtract complex numbers	242
	Objective C To multiply complex numbers	243
	Objective D To divide complex numbers	246
SECTION 5.4	Solving Equations Containing Radical Expressions	249
	Objective A To solve an equation containing one or more radical expressions	249
	Objective B To solve application problems	251
	<i>Calculators and Computers</i>	255;
	<i>Chapter Summary</i>	256;
	<i>Chapter Review</i>	257;
	<i>Chapter Test</i>	259;
	<i>Cumulative Review</i>	261

6 Linear Equations in Two Variables 263

SECTION 6.1	The Rectangular Coordinate System	265
	Objective A To graph points on a rectangular coordinate system	265
	Objective B To determine a solution of a linear equation in two variables	266
	Objective C To graph an equation of the form $y = mx + b$	267
	Objective D To graph an equation of the form $Ax + By = C$	269
SECTION 6.2	Slopes and Intercepts of Straight Lines	275
	Objective A To find the slope of a line given two points	275
	Objective B To find the x - and the y -intercept of a straight line	277
	Objective C To graph a line given a point and the slope	278
SECTION 6.3	Finding Equations of Lines	287
	Objective A To find the equation of a line given a point and the slope	287
	Objective B To find the equation of a line given two points	289
SECTION 6.4	Parallel and Perpendicular Lines	295
	Objective A To find parallel and perpendicular lines	295
SECTION 6.5	Applications of Linear Equations	301
	Objective A To obtain data from a graph	301
SECTION 6.6	Inequalities in Two Variables	305
	Objective A To graph the solution set of an inequality in two variables	305
	<i>Calculators and Computers</i> 309; <i>Chapter Summary</i> 309;	
	<i>Chapter Review</i> 311; <i>Chapter Test</i> 313; <i>Cumulative Review</i> 315	

7 Quadratic Equations 317

SECTION 7.1	Solving Quadratic Equations by Factoring or by Taking Square Roots	319
	Objective A To solve a quadratic equation by factoring	319
	Objective B To write a quadratic equation given its solutions	320
	Objective C To solve a quadratic equation by taking square roots	321
SECTION 7.2	Solving Quadratic Equations by Completing the Square	327
	Objective A To solve a quadratic equation by completing the square	327
SECTION 7.3	Solving Quadratic Equations by Using the Quadratic Formula	333
	Objective A To solve a quadratic equation by using the quadratic formula	333
SECTION 7.4	Solving Equations That are Reducible to Quadratic Equations	339
	Objective A To solve an equation that is quadratic in form	339
	Objective B To solve a radical equation that is reducible to a quadratic equation	340
	Objective C To solve a fractional equation that is reducible to a quadratic equation	342
SECTION 7.5	Quadratic Inequalities and Rational Inequalities	345
	Objective A To solve a non-linear inequality	345

SECTION 7.6	Applications of Quadratic Equations	349
	Objective A To solve application problems	349
	<i>Calculators and Computers</i>	353;
	<i>Chapter Summary</i>	353;
	<i>Chapter Review</i>	355;
	<i>Chapter Test</i>	357;
	<i>Cumulative Review</i>	359

8 Functions and Relations 361

SECTION 8.1	Functions and Relations	363
	Objective A To evaluate a function	363
	Objective B To find the domain and range of a function	366
SECTION 8.2	Graphs of Functions	373
	Objective A To graph a function	373
	Objective B To determine if a relation is a function	377
	Objective C To determine from a graph whether a function is one-to-one	379
SECTION 8.3	Composite Functions and Inverse Functions	387
	Objective A To find the composition of two functions	387
	Objective B To find the inverse of a function	389
SECTION 8.4	Variation	395
	Objective A To solve variation problems	395
	<i>Calculators and Computers</i>	401;
	<i>Chapter Summary</i>	401;
	<i>Chapter Review</i>	403;
	<i>Chapter Test</i>	407;
	<i>Cumulative Review</i>	409

9 Conic Sections 411

SECTION 9.1	The Parabola	413
	Objective A To graph a parabola	413
	Objective B To find the minimum or maximum of a quadratic function	417
	Objective C To find the x -intercepts of a parabola	418
	Objective D To solve application problems	420
SECTION 9.2	The Circle	427
	Objective A To find the distance between two points in the plane	427
	Objective B To find the equation of a circle and then graph the circle	428
	Objective C To write the equation of a circle in standard form and then graph the circle	430
SECTION 9.3	The Ellipse and the Hyperbola	433
	Objective A To graph an ellipse with center at the origin	433
	Objective B To graph a hyperbola with center at the origin	435
SECTION 9.4	Quadratic Inequalities	439
	Objective A To graph the solution set of a quadratic inequality in two variables	439
	<i>Calculators and Computers</i>	443;
	<i>Chapter Summary</i>	443;
	<i>Chapter Review</i>	445;
	<i>Chapter Test</i>	447;
	<i>Cumulative Review</i>	449

10 Systems of Equations and Inequalities 451

- SECTION 10.1 Solving Systems of Linear Equations by Graphing and by the Substitution Method 453**
- Objective A To solve a system of linear equations by graphing 453
 Objective B To solve a system of linear equations by the substitution method 455
- SECTION 10.2 Solving Systems of Linear Equations by the Addition Method 461**
- Objective A To solve a system of two linear equations in two variables by the addition method 461
 Objective B To solve a system of three linear equations in three variables by the addition method 464
- SECTION 10.3 Solving Systems of Equations by Using Determinants 471**
- Objective A To evaluate a determinant 471
 Objective B To solve a system of equations by using Cramer's Rule 474
- SECTION 10.4 Application Problems in Two Variables 479**
- Objective A To solve rate-of-wind or current problems 479
 Objective B To solve application problems using two variables 480
- SECTION 10.5 Solving Systems of Nonlinear Equations and Systems of Inequalities 487**
- Objective A To solve a nonlinear system of equations 487
 Objective B To graph the solution set of a system of inequalities 491
Calculators and Computers 497; Chapter Summary 497; Chapter Review 499; Chapter Test 503; Cumulative Review 505

11 Exponential and Logarithmic Functions 507

- SECTION 11.1 The Exponential and Logarithmic Functions 509**
- Objective A To evaluate an exponential function 509
 Objective B To graph an exponential function 510
 Objective C To write equivalent exponential and logarithmic expressions 511
 Objective D To graph a logarithmic function 513
- SECTION 11.2 The Properties of Logarithms 519**
- Objective A To use the Properties of Logarithms to simplify expressions containing logarithms 519
- SECTION 11.3 Computations with Logarithms 527**
- Objective A To find common logarithms 527
 Objective B To find common antilogarithms 529
 Objective C To use interpolation to find a common logarithm or antilogarithm 531
 Objective D To evaluate numerical expressions by using common logarithms 533
- SECTION 11.4 Solving Exponential and Logarithmic Equations 537**
- Objective A To solve an exponential equation 537
 Objective B To solve a logarithmic equation 539
 Objective C To find the logarithm of a number other than base 10 540
