SUMMARY

This book provides an introduction to traffic engineering. The emphasis will be placed on fundamental concepts and principles of traffic operations, procedures and methods of traffic engineering studies, and analytical and computational skills of transportation system analysis and control. It is hoped that this book will be useful to the senior undergraduate students and graduate students, and to those in traffic and transportation profession who need to solve problems on the analysis, design, plan, operation, control and management of traffic system.

内 容 提 要

本书详细地介绍了交通工程学的基本概念、原理和方法,是高等学校交通工程专业双语教材,可作为交通工程、交通运输、土木工程、车辆工程、城市规划、物流工程等专业高年级本科生和交通工程学科研生产的教材,也可供城市规划、汽车设计与运用服务、交通运输管理部门和公共交通营运单位以及物流企业的专业技术人员参考。

PREFACE

Because the discipline of traffic engineering is experiencing a phenomenal growth in the academia and engineering, this book is designed for use as a bilingual text in an introduction to traffic engineering course with English and Chinese. The emphasis on this book will be placed on fundamental concepts and principles of traffic operations, procedures and methods of traffic engineering studies, and analytical and computational skills of transportation system analysis and control. This book should be most suitable to the junior and senior undergraduate students and first year graduate students, and to those in traffic and transportation profession who need to solve problems on the analysis, design, plan, operation, control and management of traffic system.

This book consists of nine chapters, representing the most updated and unique compilation of knowledge in the field of traffic engineering. These chapters are:

Chapter 1, Introduction of Traffic Engineering, written by Wuhong Wang, (Beijing Institute of Technology) ; edited by Huachun Tan, Jianqun Wang (Beijing Institute of Technology)

Chapter 2, Traffic Characteristics, written by Xiaobei Jiang (Technical University of Munich), Wuhong Wang; edited by Xiaohua Zhao, Jian Rong (Beijing University of Technology)

Chapter 3, Traffic Stream Characteristics, written by Xiaobei Jiang, Wuhong Wang; edited by Jian Rong, Xiaohua Zhao

Chapter 4, Traffic Engineering Studies and Programs, written by Hongwei Guo, Ziyu Gao (Beijing Jiaotong University) ; edited by Liya Yao, Hui Xiong (Beijing Institute of Technology)

Chapter 5, Fundamentals of Traffic Flow Theory, written by Hui Xiong; edited by Hongwei Guo, Wuhong Wang

Chapter 6, Traffic Control and Management, written by Huachun Tan (Beijing Institute of Technology) ; edited by Liya Yao, Jian Rong

Chapter 7, Capacity and Level-of-Service Analysis, written by Hongwei Guo, Wuhong Wang; edited by Xiaobei Jiang, Hui Xiong

Chapter 8, Transportation Planning, written by Liya Yao, Lishan Sun (Beijing University of Technology) ; edited by Huachun Tan, Wuhong Wang

Chapter 9, New technologies in Traffic System, written by Jianqun Wang; edited by Lishan Sun, Wuhong Wang

We are very grateful to Prof. Futian Ren, Beijing University of Technology; Prof. Heiner Bubb, Technical University of Munich; Prof. Katchushi Ikeuchi, the University of Tokyo, they kindly provided many helpful suggestions for this book writing and our research & teaching works. We have incorporated most of their suggestions, and we feel that the book is stronger because of them.

We wish to acknowledge the useful comments offered by our many colleagues and students: Chenxi Ding, Tangqiao Xu, Shijie Guo, Hao Liu, Hanru Li, Shuangchen Xia, Yuejun Liu, Xuedong Guo, Xiao Wang, Yan Mao, Jing Jin. Of course, we sincerely thank all authors whose works are cited in the references of this book. No them without this book!

Last but not least we feel honored that the publication of this book is supported by Beijing Municipal Higher-quality Textbook for Higher Education Project and key Education Reform Project of Beijing Institute of Technology.

前　　言

本书详细地介绍了交通工程的基本概念、原理和方法,是国内高等院校交通工程专业双语教材。由于交通工程学是交通工程、交通运输及土木工程等专业的平台课,也是城市规划、汽车服务工程、交通管理工程、车辆工程、物流工程等相关专业重点涉及的必修或选修课程,因此,在编写本书时,我们结合了在德国、日本、美国留学的多年经验,在研读和课堂随听德语—英语、日语—英语双语教学及英语教学的基础上,注重教材内容选舍和编写方式的创新,不仅合理借鉴了近年来国内著名高校双语教学示范的研究成果以及实施经验,而且着重参考了德国三所精英大学之一的慕尼黑工业大学德—英双语国际学生培养模式和日本最高学府东京大学日—英双语交互式联合教学的成功案例,同时结合美国高等学校交通工程学课程的发展现状,用简单明了的英文来撰写相关内容,以推荐阅读的方式给出对应中文知识的相关教材和文献名称,供学生课外选读与复习,从而保证了中英文专业内容的互通。此外,本教材在体系构建和编写方面还有如下特点:

(1)本书不是从纯粹的英文专业教材角度出发,而是从专业基础课的双语教学层次上,通过大量的实际工程案例和具体例题来说明交通工程学的基本原理、方法和理论,最后给出详细的思考题、问答题和分析计算题,供学生选做;

(2)考虑到中国学生的认知能力和英语水平,对涉及的某些关键性的交通工程标准规范,结合中、日、德、美等国间的交通发展现状进行了必要的说明和透彻的解释;

(3)充分结合本课程的导论性质,全书以丰富多彩的图片图例来说明复杂的交通现象并解析其本质,同时贯穿了从概述——讲解——总结——阅读的路线来构建和编写具体的章节内容;

(4)每一章均包含有推荐阅读的中文文献和参考资料,按不同的难易顺序列出,使学生在学习交通工程专业知识的同时,既能够充分掌握本专业内容的中文术语表达,也能了解对应的专业英语词汇,以期达到中英文术语和专业内容的互通、互译、互解和互知;

(5)本书的每一章均由具有留学背景的教授参与编写或校改,以中英文索引的方式在附录中列出大量交通工程常见术语,对一些重要的单词进行了必要的解释,以便于学生和读者理解教材内容。

本书由北京理工大学王武宏教授主编,北京工业大学任福田教授、德国慕尼黑工业大学Heiner Bubb教授、日本东京大学池内克史教授审阅并提出了许多有益的建议,保证了全书编写与内容取材方面的规范。本书共分九章,涵盖了交通工程学的主要内容,即概论、交通特性、交通流特性、交通调查、交通流理论、通行能力与服务水平、交通管理与控制、交通规划、新技术在交通中的应用。本书具体编写和校改人员的分工如下:

第一章由北京理工大学王武宏教授编写,北京理工大学谭华春、王建群教授校改;

第二章由慕尼黑工业大学蒋晓蓓,王武宏编写,北京工业大学赵晓华、荣建教授校改;

第三章由蒋晓蓓、王武宏编写,荣建、赵晓华校改;

第四章由北京交通大学郭宏伟、高自友教授编写,北京理工大学姚丽亚讲师、熊辉副教授

校改；

第五章由熊辉编写，郭宏伟、王武宏校改；

第六章由谭华春编写，姚丽亚、荣建校改；

第七章由郭宏伟、王武宏编写，蒋晓蓓、熊辉校改；

第八章由姚丽亚、北京工业大学孙立山讲师编写，谭华春、王武宏校改；

第九章由王建群编写，孙立山、王武宏校改。

本书在编写过程中，北京理工大学的丁晨曦参与了部分章节的编写和资料查阅工作，我们的同事和学生徐唐桥、郭思婕、刘皓、李涵茹、夏璇辰、刘跃军、郭雪东、王潇、毛琰、金晶等提出了许多有用的建议并整理了文稿。当然，我们也要特别感谢本书的所有被引文献的作者，正是他们辛苦的前提工作给予了我们编写本书的便利。由于编者学识有限，加之国内缺少可供参考的交通工程学双语教材，书中的错误和疏忽之处在所难免，祈请大家不吝指正，以便修订再版时改进完善！

本书系北京市高等教育精品教材立项项目，得到北京理工大学教育教学改革重点项目的资助，可作为高等院校交通工程、交通运输、土木工程、车辆工程、城市规划、物流工程等专业高年级本科生和交通运输工程研究生的教材，也可供城市交通规划、汽车设计制造与运用服务、交通运输管理部门和公共交通运营单位以及物流企业的专业技术人员参考。

CONTENTS

Chapter 1 Introduction of Traffic Engineering	1
1.1 Importance of traffic and transportation	1
1.1.1 Transportation's role in social life and economics	1
1.1.2 People, goods and vehicles	2
1.1.3 Traffic and cities, towns and villages	2
1.1.4 Traffic problems and challenges	3
1.2 Traffic engineering definition and development	4
1.2.1 Definition of traffic engineering	4
1.2.2 Traffic engineering objectives	5
1.2.3 Traffic engineering development	7
1.2.3.1 Chronology of traffic engineering	7
1.2.3.2 Background of traffic engineering development	8
1.3 Transportation modes and functions	9
1.3.1 Transportation modes	9
1.3.2 Transportation demand	12
1.3.3 Mobility and accessibility	13
1.4 Characteristics and elements of traffic engineering	14
1.4.1 Responsibility and liability of traffic engineer	14
1.4.2 Specialties in traffic engineer	15
1.4.3 Basic contents of traffic engineering	17
1.4.4 Traffic engineering characteristics	18
Problems	19
Additional Chinese readings	19
References	19
Chapter 2 Traffic Characteristics	21
2.1 Road user characteristics	21
2.1.1 Driver characteristics	21
2.1.1.1 Driving information processing	21
2.1.1.2 Physical features	22
2.1.1.3 Psychological features and personality	25
2.1.1.4 Other factors contribute to driver behavior	25
2.1.2 Passenger characteristics	26
2.1.2.1 Trip purpose	26
2.1.2.2 Demand for safe and comfort	26

2.1.3 Pedestrian characteristics	27
2.1.3.1 Pedestrian walking speed	27
2.1.3.2 Spatial needs	28
2.1.3.3 Factors influence to pedestrian characteristics	29
2.1.4 Bicyclist characteristics	30
2.1.4.1 Advantages and disadvantages of this mode	30
2.1.4.2 Basic characteristics of bicyclist and bicycle	31
2.1.5 Other road users	32
2.2 Vehicle characteristics	33
2.2.1 Vehicle types and dimensions	33
2.2.1.1 Vehicle types	33
2.2.1.2 Vehicle dimensions	34
2.2.1.3 Power-to-Weight ratio	34
2.2.2 Power performances	35
2.2.2.1 Acceleration performance	35
2.2.2.2 Climbing performance	36
2.2.2.3 Maximum speed	37
2.2.3 Braking performance	37
2.2.3.1 Deceleration performance	37
2.2.3.2 Braking efficiency and stability	39
2.2.4 Turning characteristics	40
2.2.4.1 Turning radius and turning path	40
2.2.4.2 Turning movements	40
2.3 Geometric characteristics of roadways	41
2.3.1 Classifications and roadway hierarchy	41
2.3.1.1 Classifications and highway hierarchy	41
2.3.1.2 Classifications and urban roads hierarchy	43
2.3.2 Geometric characteristics of roadways	43
2.3.2.1 Roadway alignment	43
2.3.2.2 Sight distance	45
2.3.2.3 Intersections	48
2.3.3 Road network arrangement	50
2.3.3.1 Highway network arrangement	50
2.3.3.2 Urban street network arrangement	50
2.3.3.3 Road network density	52
2.4 Environment characteristics	53
Problems	55
Additional Chinese readings	55
References	55

Chapter 3 Traffic Stream Characteristics	57
3.1 Taxonomies of traffic stream	57
3.2 Characteristics of traffic volume	57
3.2.1 Volume and flow rate	57
3.2.2 Measures of traffic volume	58
3.2.3 Temporal variations	61
3.2.4 Spatial distributions	64
3.3 Basic parameters	65
3.3.1 Macroscopic parameters	65
3.3.1.1 Speed	65
3.3.1.2 Density and occupancy	69
3.3.2 Microscopic parameters	70
3.4 Uninterrupted flow	72
3.4.1 Relationship among flow rate, speed and density	72
3.4.2 Speed-density relationship	73
3.4.3 Flow rate-density relationship	74
3.4.4 Flow rate-speed relationship	74
3.5 Interrupted flow	75
3.5.1 Delay	75
3.5.2 Saturation flow rate	76
3.5.3 Queuing	78
Problems	78
Additional Chinese readings	78
References	78
Chapter 4 Traffic Engineering Studies and Programs	80
4.1 Volume studies	80
4.1.1 Study type	80
4.1.2 Counting periods	81
4.1.3 Study methods and counting techniques	82
4.1.3.1 Manual count	82
4.1.3.2 Automatic count	85
4.1.4 Study procedure	85
4.1.4.1 Key steps to a manual count study	86
4.1.4.2 Key steps to an automatic count study	86
4.1.5 Example of study results	87
4.2 Speed, travel time and delay studies	89
4.2.1 Spot speed study	89
4.2.1.1 Data collection method	90
4.2.1.2 Data calculation and analysis	93

4.2.2 Travel time and delay studies	96
4.2.2.1 Concepts and definitions for travel time and delay data	97
4.2.2.2 Methods for obtaining travel time or delay data	98
4.2.3 Intersection delay studies	103
4.2.3.1 Methods for measurement of intersection delay	103
4.2.3.2 Field data collection	104
4.2.3.3 Observer assignment for the field studies	105
4.3 Parking studies	106
4.3.1 Parking generation	106
4.3.2 Types of parking	107
4.3.3 Parking studies	108
4.3.3.1 Types of data related to parking	108
4.3.3.2 Inventory of parking facilities	109
4.3.3.3 Accumulation counts	109
4.3.3.4 Duration and turnover surveys	110
4.3.3.5 User information surveys	110
4.3.4 Parking characteristics	111
4.4 Accidents studies, statistics and programs	112
4.4.1 Compilation of safety statistics	112
4.4.2 Accident data collection and record systems	114
4.4.2.1 Accident report	114
4.4.2.2 Accident filing system	114
4.4.3 Accident studies	115
4.4.3.1 Objectives	115
4.4.3.2 Studies of high-accident locations	115
4.4.3.3 Before-and-after studies	116
4.4.4 Accidents statistics	117
Problems	117
Additional Chinese readings	119
References	119
Chapter 5 Fundamentals of Traffic Flow Theory	120
5.1 Macroscopic description of traffic flow	120
5.1.1 Greenshields model	121
5.1.2 Greenberg model	122
5.1.3 Application of linear regression	124
5.2 Traffic data analysis	128
5.2.1 Average and mean	128
5.2.2 Variance	129
5.2.3 Hypothesis and test	129

5.3 Microscopic description of traffic flow	136
5.3.1 GM car following models	136
5.3.2 Pipes car following models	139
5.4 Shock waves	141
5.5 Queuing theory	144
5.5.1 D/D/1 queuing	145
5.5.2 M/D/1 queuing	146
5.5.3 M/M/1 queuing	147
Problems	148
Additional Chinese readings	149
References	149
Chapter 6 Traffic Management and Control	152
6.1 Traffic control devices	152
6.1.1 Introduction to traffic control devices	152
6.1.2 The principal standards in USA and China	153
6.1.3 Traffic markings	153
6.1.4 Traffic signs	160
6.1.5 Traffic signals	163
6.1.6 Special types of control	164
6.2 Intersection design and control	165
6.2.1 Intersection design objectives and considerations	165
6.2.2 Intersection size design	166
6.2.3 Intersection channelization	167
6.2.4 Special situations at intersections	168
6.2.5 Street hardware for signalized intersections	170
6.2.6 The principles of intersection control	170
6.2.7 The hierarchy of intersection control	171
6.2.8 Level 1 control: basic rules of the road	172
6.2.9 Level 2 control: YIELD and STOP control	172
6.2.10 Level 3 control: traffic control signals	173
6.3 TSM and TDM	175
6.3.1 TSM's definition	175
6.3.2 TSM objectives, scope, outline and characteristics	175
6.3.3 The main measures of TSM	176
6.3.4 Introduction to TDM	178
6.3.5 TDM challenges	179
6.3.6 Components of TDM	179
6.4 Intelligent transportation system	180
6.4.1 Definition of ITS	181

6.4.2	Characteristics and components of ITS	181
6.4.3	Introduction to some sub-systems of ITS	182
6.4.4	GIS and GPS in ITS	184
6.4.5	The range of ITS applications	185
6.4.6	Development of ITS	186
Problems		188
Additional Chinese readings		188
References		188
Chapter 7 Capacity and Level-of-Service Analysis		189
7.1	Capacity and level of service concepts	189
7.1.1	Capacity	189
7.1.2	Level of service	190
7.1.3	Important definitions in capacity analysis and LOS	193
7.1.3.1	Measures of effectiveness	193
7.1.3.2	Service flow rates	193
7.1.3.3	The v/c ratio	193
7.1.4	Framework of capacity analysis	194
7.2	Basic freeway capacity and level of service	195
7.2.1	Freeway flow characteristics	195
7.2.2	Free-flow speed	196
7.2.3	Basic freeway segment capacity	196
7.2.4	Level of service	197
7.2.5	Calculation procedure	197
7.2.5.1	Determine free flow speed	197
7.2.5.2	Determine flow rate	199
7.2.5.3	Determine the LOS	202
7.3	Two-lane highway analysis	204
7.3.1	Basic characteristics	204
7.3.1.1	Base conditions	205
7.3.1.2	Critical parameters	205
7.3.1.3	Capacity and LOS	205
7.3.2	Analysis procedure	206
7.3.2.1	Determine free flow speed	207
7.3.2.2	Determining demand flow rate	208
7.3.2.3	Determine the average travel speed and percent time spent following	209
7.3.2.4	Determine the LOS	212
7.4	Signalized intersections analysis	214
7.4.1	Introduction to signalized intersection capacity	214
7.4.2	Analysis of signalized intersections	215

7.4.2.1	Determine input parameters	216
7.4.2.2	Determine lane grouping	216
7.4.2.3	Determine saturation flow rate	217
7.4.2.4	Determine capacity and volume to capacity ratios	220
7.4.2.5	Determine performance measures	220
Problems		221
Additional Chinese readings		222
References		223
Chapter 8 Transportation Planning		224
8.1	Overview of transportation planning	224
8.1.1	Definition of transportation planning	224
8.1.2	Goals of transportation planning	225
8.1.3	Types of transportation planning	226
8.1.4	The nature of travel	226
8.1.5	The transportation planning process	227
8.2	Transportation and land use	229
8.2.1	The requirements for considering land use in the transportation planning	229
8.2.2	Travel demand and land use	230
8.2.3	The transportation-land use system	231
8.2.4	The relationship between transportation and land use	232
8.3	Transportation demand analysis	233
8.3.1	Transportation demand analysis	233
8.3.2	Four-step forecasting model	234
8.3.3	Trip generation model	236
8.3.4	Trip distribution model	240
8.3.5	Modal split model	246
8.3.6	Trip assignment model	248
8.4	Disaggregate method	253
8.4.1	Introduction of disaggregate model	253
8.4.2	Some basic knowledge prior to disaggregate	255
8.4.2.1	The characters of behavior theory	255
8.4.2.2	A framework for choice theory	255
8.4.2.3	Introduction of rational behavior	260
8.4.3	Binary logit model	260
8.4.4	Multinomial logit model	262
8.4.4.1	Theory of multinomial choice	263
8.4.4.2	The multinomial logit model	264
8.4.5	Nested logit model	265
Problems		267
