## Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

With respect to any drug or pharmaceutical products identified, readers are advised to check the most current information provided (i) on procedures featured or (ii) by the manufacturer of each product to be administered, to verify the recommended dose or formula, the method and duration of administration, and contraindications. It is the responsibility of practitioners, relying on their own experience and knowledge of their patients, to make diagnoses, to determine dosages and the best treatment for each individual patient, and to take all appropriate safety precautions.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

# GUYTON AND HALL

The world's foremost  
medical physiology resources

## Guyton and Hall Textbook of Medical Physiology, 13th Edition

John E. Hall, PhD

978-1-4557-7005-2

Unlike other physiology textbooks, this **clear and comprehensive guide** has a consistent, single-author voice and focuses on the content most relevant to clinical and pre-clinical students. The detailed but lucid text is complemented by **didactic illustrations** that summarize key concepts in physiology and pathophysiology.

## Pocket Companion to Guyton and Hall Textbook of Medical Physiology, 13th Edition

John E. Hall, PhD

978-1-4557-7006-9

All of the essential information you need from the world's foremost medical physiology textbook – right in your pocket! Reflecting the structure and content of the larger text, it helps you **recall and easily review** the most essential, need-to-know concepts in physiology.

## Guyton and Hall Physiology Review, 3rd Edition

John E. Hall, PhD

978-1-4557-7007-6

Prepare for class exams as well as the physiology portion of the USMLE Step 1. This review book features more than 1,000 **board-style questions and answers**, allowing you to test your knowledge of the most essential, need-to-know concepts in physiology!

**ORDER TODAY!** [elsevierhealth.com](http://elsevierhealth.com)

**My Family**

For their abundant support, for their patience and  
understanding, and for their love

To

**Arthur C. Guyton**

For his imaginative and innovative research  
For his dedication to education  
For showing us the excitement and joy of physiology  
And for serving as an inspirational role model

# Preface

The first edition of the *Textbook of Medical Physiology* was written by Arthur C. Guyton almost 60 years ago. Unlike most major medical textbooks, which often have 20 or more authors, the first eight editions of the *Textbook of Medical Physiology* were written entirely by Dr. Guyton, with each new edition arriving on schedule for nearly 40 years. Dr. Guyton had a gift for communicating complex ideas in a clear and interesting manner that made studying physiology fun. He wrote the book to help students learn physiology, not to impress his professional colleagues.

I worked closely with Dr. Guyton for almost 30 years and had the privilege of writing parts of the ninth and tenth editions. After Dr. Guyton's tragic death in an automobile accident in 2003, I assumed responsibility for completing the subsequent editions.

For the thirteenth edition of the *Textbook of Medical Physiology*, I have the same goal as for previous editions—to explain, in language easily understood by students, how the different cells, tissues, and organs of the human body work together to maintain life.

This task has been challenging and fun because our rapidly increasing knowledge of physiology continues to unravel new mysteries of body functions. Advances in molecular and cellular physiology have made it possible to explain many physiology principles in the terminology of molecular and physical sciences rather than in merely a series of separate and unexplained biological phenomena.

The *Textbook of Medical Physiology*, however, is not a reference book that attempts to provide a compendium of the most recent advances in physiology. This is a book that continues the tradition of being written for students. It focuses on the basic principles of physiology needed to begin a career in the health care professions, such as medicine, dentistry, and nursing, as well as graduate studies in the biological and health sciences. It should also be useful to physicians and health care professionals who wish to review the basic principles needed for understanding the pathophysiology of human disease.

I have attempted to maintain the same unified organization of the text that has been useful to students in the past and to ensure that the book is comprehensive enough

that students will continue to use it during their professional careers.

My hope is that this textbook conveys the majesty of the human body and its many functions and that it stimulates students to study physiology throughout their careers. Physiology is the link between the basic sciences and medicine. The great beauty of physiology is that it integrates the individual functions of all the body's different cells, tissues, and organs into a functional whole, the human body. Indeed, the human body is much more than the sum of its parts, and life relies upon this total function, not just on the function of individual body parts in isolation from the others.

This brings us to an important question: How are the separate organs and systems coordinated to maintain proper function of the entire body? Fortunately, our bodies are endowed with a vast network of feedback controls that achieve the necessary balances without which we would be unable to live. Physiologists call this high level of internal bodily control *homeostasis*. In disease states, functional balances are often seriously disturbed and homeostasis is impaired. When even a single disturbance reaches a limit, the whole body can no longer live. One of the goals of this text, therefore, is to emphasize the effectiveness and beauty of the body's homeostasis mechanisms as well as to present their abnormal functions in disease.

Another objective is to be as accurate as possible. Suggestions and critiques from many students, physiologists, and clinicians throughout the world have checked factual accuracy as well as balance in the text. Even so, because of the likelihood of error in sorting through many thousands of bits of information, I wish to issue a further request to all readers to send along notations of error or inaccuracy. Physiologists understand the importance of feedback for proper function of the human body; so, too, is feedback important for progressive improvement of a textbook of physiology. To the many persons who have already helped, I express sincere thanks. Your feedback has helped to improve the text.

A brief explanation is needed about several features of the thirteenth edition. Although many of the chapters have been revised to include new principles of physiology

and new figures to illustrate these principles, the text length has been closely monitored to limit the book size so that it can be used effectively in physiology courses for medical students and health care professionals. Many of the figures have also been redrawn and are in full color. New references have been chosen primarily for their presentation of physiological principles, for the quality of their own references, and for their easy accessibility. The selected bibliography at the end of the chapters lists papers mainly from recently published scientific journals that can be freely accessed from the PubMed site at <http://www.ncbi.nlm.nih.gov/pubmed/>. Use of these references, as well as cross-references from them, can give the student almost complete coverage of the entire field of physiology.

The effort to be as concise as possible has, unfortunately, necessitated a more simplified and dogmatic presentation of many physiological principles than I normally would have desired. However, the bibliography can be used to learn more about the controversies and unanswered questions that remain in understanding the complex functions of the human body in health and disease.

Another feature is that the print is set in two sizes. The material in large print constitutes the fundamental physiological information that students will require in virtually all of their medical activities and studies. The material in small print and highlighted with a pale blue background is of several different kinds: (1) anatomic, chemical, and

other information that is needed for immediate discussion but that most students will learn in more detail in other courses; (2) physiological information of special importance to certain fields of clinical medicine; and (3) information that will be of value to those students who may wish to study particular physiological mechanisms more deeply.

I wish to express sincere thanks to many persons who have helped to prepare this book, including my colleagues in the Department of Physiology and Biophysics at the University of Mississippi Medical Center who provided valuable suggestions. The members of our faculty and a brief description of the research and educational activities of the department can be found at <http://physiology.umc.edu/>. I am also grateful to Stephanie Lucas for excellent secretarial services and to James Perkins for excellent illustrations. Michael Schenk and Walter (Kyle) Cunningham also contributed to many of the illustrations. I also thank Elyse O'Grady, Rebecca Gruliow, Carrie Stetz, and the entire Elsevier team for continued editorial and production excellence.

Finally, I owe an enormous debt to Arthur Guyton for the great privilege of contributing to the *Textbook of Medical Physiology* for the past 25 years, for an exciting career in physiology, for his friendship, and for the inspiration that he provided to all who knew him.

**John E. Hall**

# Contents

## UNIT I

### Introduction to Physiology: The Cell and General Physiology

#### CHAPTER 1

##### Functional Organization of the Human Body and Control of the "Internal Environment"

Cells Are the Living Units of the Body	3
Extracellular Fluid—The "Internal Environment"	3
Homeostasis—Maintenance of a Nearly Constant Internal Environment	4
Control Systems of the Body	6
Summary—Automaticity of the Body	10

#### CHAPTER 2

##### The Cell and Its Functions

Organization of the Cell	11
Physical Structure of the Cell	12
Comparison of the Animal Cell With Precellular Forms of Life	18
Functional Systems of the Cell	19
Locomotion of Cells	24

#### CHAPTER 3

##### Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction

Genes in the Cell Nucleus Control Protein Synthesis	27
The DNA Code in the Cell Nucleus Is Transferred to RNA Code in the Cell Cytoplasm—The Process of Transcription	30
Synthesis of Other Substances in the Cell	35
Control of Gene Function and Biochemical Activity in Cells	35
The DNA—Genetic System Controls Cell Reproduction	37
Cell Differentiation	41
Apoptosis—Programmed Cell Death	41
Cancer	41

## UNIT II

### Membrane Physiology, Nerve, and Muscle

#### CHAPTER 4

##### Transport of Substances Through Cell Membranes

The Cell Membrane Consists of a Lipid Bilayer With Cell Membrane Transport Proteins	47
Diffusion	47
"Active Transport" of Substances Through Membranes	54

#### CHAPTER 5

##### Membrane Potentials and Action Potentials

Basic Physics of Membrane Potentials	61
Measuring the Membrane Potential	62
Resting Membrane Potential of Neurons	63
Neuron Action Potential	65
Propagation of the Action Potential	69
Re-establishing Sodium and Potassium Ionic Gradients After Action Potentials Are Completed—Importance of Energy Metabolism	69
Plateau in Some Action Potentials	70
Rhythmicity of Some Excitable Tissues—Repetitive Discharge	70
Special Characteristics of Signal Transmission in Nerve Trunks	71

#### CHAPTER 6

##### Contraction of Skeletal Muscle

Physiological Anatomy of Skeletal Muscle	75
General Mechanism of Muscle Contraction	77
Molecular Mechanism of Muscle Contraction	78
Energetics of Muscle Contraction	82
Characteristics of Whole Muscle Contraction	83

**CHAPTER 7**

<b>Excitation of Skeletal Muscle: Neuromuscular Transmission and Excitation-Contraction Coupling</b>	<b>89</b>
Transmission of Impulses From Nerve Endings to Skeletal Muscle Fibers: The Neuromuscular Junction	89
Muscle Action Potential	93
Excitation-Contraction Coupling	93

**CHAPTER 8**

<b>Excitation and Contraction of Smooth Muscle</b>	<b>97</b>
Contraction of Smooth Muscle	97
Regulation of Contraction by Calcium Ions	99
Nervous and Hormonal Control of Smooth Muscle Contraction	102

**UNIT III****The Heart****CHAPTER 9**

<b>Cardiac Muscle; The Heart as a Pump and Function of the Heart Valves</b>	<b>109</b>
Physiology of Cardiac Muscle	109
Cardiac Cycle	113
Regulation of Heart Pumping	119

**CHAPTER 10**

<b>Rhythmical Excitation of the Heart</b>	<b>123</b>
Specialized Excitatory and Conductive System of the Heart	123
Control of Excitation and Conduction in the Heart	126

**CHAPTER 11**

<b>The Normal Electrocardiogram</b>	<b>131</b>
Characteristics of the Normal Electrocardiogram	131
Flow of Current Around the Heart During the Cardiac Cycle	133
Electrocardiographic Leads	134
Methods for Recording Electrocardiograms	137

**CHAPTER 12**

<b>Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis</b>	<b>139</b>
Principles of Vectorial Analysis of Electrocardiograms	139
Vectorial Analysis of the Normal Electrocardiogram	141
Mean Electrical Axis of the Ventricular QRS and Its Significance	144

Conditions That Cause Abnormal Voltages of the QRS Complex	147
Prolonged and Bizarre Patterns of the QRS Complex	148
Current of Injury	148
Abnormalities in the T Wave	152

**CHAPTER 13**

<b>Cardiac Arrhythmias and Their Electrocardiographic Interpretation</b>	<b>155</b>
Abnormal Sinus Rhythms	155
Abnormal Rhythms That Result From Block of Heart Signals Within the Intracardiac Conduction Pathways	156
Premature Contractions	158
Paroxysmal Tachycardia	160
Ventricular Fibrillation	161
Atrial Fibrillation	164
Atrial Flutter	165
Cardiac Arrest	165

**UNIT IV****The Circulation****CHAPTER 14**

<b>Overview of the Circulation; Biophysics of Pressure, Flow, and Resistance</b>	<b>169</b>
Physical Characteristics of the Circulation	169
Basic Principles of Circulatory Function	170
Interrelationships of Pressure, Flow, and Resistance	171

**CHAPTER 15**

<b>Vascular Distensibility and Functions of the Arterial and Venous Systems</b>	<b>179</b>
Vascular Distensibility	179
Arterial Pressure Pulsations	180
Veins and Their Functions	184

**CHAPTER 16**

<b>The Microcirculation and Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow</b>	<b>189</b>
Structure of the Microcirculation and Capillary System	189
Flow of Blood in the Capillaries—Vasomotion	190
Exchange of Water, Nutrients, and Other Substances Between the Blood and Interstitial Fluid	191
Interstitial Fluid	192
Fluid Filtration Across Capillaries Is Determined by Hydrostatic and Colloid Osmotic Pressures and the Capillary Filtration Coefficient	193
Lymphatic System	198

**CHAPTER 17****Local and Humoral Control of Tissue Blood Flow**

Local Control of Blood Flow in Response to Tissue Needs 203

Mechanisms of Blood Flow Control 203

Humoral Control of the Circulation 212

**CHAPTER 18****Nervous Regulation of the Circulation and Rapid Control of Arterial Pressure**

Nervous Regulation of the Circulation 215

Special Features of Nervous Control of Arterial Pressure 224

**CHAPTER 19****Role of the Kidneys in Long-Term Control of Arterial Pressure and in Hypertension: The Integrated System for Arterial Pressure Regulation**

Renal-Body Fluid System for Arterial Pressure Control 227

The Renin-Angiotensin System: Its Role in Arterial Pressure Control 227

Summary of the Integrated, Multifaceted System for Arterial Pressure Regulation 241

**CHAPTER 20****Cardiac Output, Venous Return, and Their Regulation**

Normal Values for Cardiac Output at Rest and During Activity 245

Control of Cardiac Output by Venous Return—The Frank-Starling Mechanism of the Heart 245

Pathologically High or Low Cardiac Outputs 248

Methods for Measuring Cardiac Output 256

**CHAPTER 21****Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease**

Blood Flow Regulation in Skeletal Muscle at Rest and During Exercise 259

Coronary Circulation 262

**CHAPTER 22****Cardiac Failure**

Circulatory Dynamics in Cardiac Failure 271

Unilateral Left Heart Failure 275

Low-Output Cardiac Failure—Cardiogenic Shock 275

Edema in Patients With Cardiac Failure 275

Cardiac Reserve 277

**CHAPTER 23****Heart Valves and Heart Sounds; Valvular and Congenital Heart Defects**

Heart Sounds 283

Abnormal Circulatory Dynamics in Valvular Heart Disease 286

Abnormal Circulatory Dynamics in Congenital Heart Defects 288

Use of Extracorporeal Circulation During Cardiac Surgery 290

Hypertrophy of the Heart in Valvular and Congenital Heart Disease 290

**CHAPTER 24****Circulatory Shock and Its Treatment**

Physiological Causes of Shock 293

Shock Caused by Hypovolemia—Hemorrhagic Shock 294

Neurogenic Shock—Increased Vascular Capacity 299

Anaphylactic Shock and Histamine Shock 300

Septic Shock 300

Physiology of Treatment in Shock 301

Circulatory Arrest 302

**UNIT V****The Body Fluids and Kidneys****CHAPTER 25****The Body Fluid Compartments: Extracellular and Intracellular Fluids; Edema**

Fluid Intake and Output Are Balanced During Steady-State Conditions 305

Body Fluid Compartments 306

Constituents of Extracellular and Intracellular Fluids 307

Measurement of Fluid Volumes in the Different Body Fluid Compartments—The Indicator-Dilution Principle 308

Determination of Volumes of Specific Body Fluid Compartments 309

Regulation of Fluid Exchange and Osmotic Equilibrium Between Intracellular and Extracellular Fluid 310

Volume and Osmolality of Extracellular and Intracellular Fluids in Abnormal States 312

Glucose and Other Solutions Administered for Nutritive Purposes 314

Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypertatremia 314

Edema: Excess Fluid in the Tissues 316

Fluids in the "Potential Spaces" of the Body 320

**CHAPTER 26****The Urinary System: Functional Anatomy and Urine Formation by the Kidneys 323**

Multiple Functions of the Kidneys	323
Physiological Anatomy of the Kidneys	324
Micturition	327
Urine Formation Results From Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	331

**CHAPTER 27****Glomerular Filtration, Renal Blood Flow, and Their Control 335**

Glomerular Filtration—The First Step in Urine Formation	335
Determinants of the GFR	337
Renal Blood Flow	340
Physiological Control of Glomerular Filtration and Renal Blood Flow	341
Autoregulation of GFR and Renal Blood Flow	342

**CHAPTER 28****Renal Tubular Reabsorption and Secretion 347**

Tubular Reabsorption Is Quantitatively Large and Highly Selective	347
Tubular Reabsorption Includes Passive and Active Mechanisms	347
Reabsorption and Secretion Along Different Parts of the Nephron	353
Regulation of Tubular Reabsorption	359
Use of Clearance Methods to Quantify Kidney Function	365

**CHAPTER 29****Urine Concentration and Dilution; Regulation of Extracellular Fluid Osmolarity and Sodium Concentration 371**

Kidneys Excrete Excess Water by Forming Dilute Urine	371
Kidneys Conserve Water by Excreting Concentrated Urine	373
Special Characteristics of the Loop of Henle That Cause Solutes to be Trapped in the Renal Medulla	374
Control of Extracellular Fluid Osmolarity and Sodium Concentration	381
Osmoreceptor-ADH Feedback System	381
Importance of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	384

**CHAPTER 30****Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium; Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume 389**

Regulation of Extracellular Fluid Potassium Concentration and Potassium Excretion	389
Control of Renal Calcium Excretion and Extracellular Calcium Ion Concentration	396
Control of Renal Magnesium Excretion and Extracellular Magnesium Ion Concentration	398
Integration of Renal Mechanisms for Control of Extracellular Fluid	398
Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body Sodium and Fluid Balance	399
Distribution of Extracellular Fluid Between the Interstitial Spaces and Vascular System	401
Nervous and Hormonal Factors Increase the Effectiveness of Renal–Body Fluid Feedback Control	402
Integrated Responses to Changes in Sodium Intake	405
Conditions That Cause Large Increases in Blood Volume and Extracellular Fluid Volume	405
Conditions That Cause Large Increases in Extracellular Fluid Volume but With Normal Blood Volume	406

**CHAPTER 31****Acid-Base Regulation 409**

H <sup>+</sup> Concentration Is Precisely Regulated	409
Acids and Bases—Their Definitions and Meanings	409
Defending Against Changes in H <sup>+</sup> Concentration: Buffers, Lungs, and Kidneys	410
Buffering of H <sup>+</sup> in the Body Fluids	410
Bicarbonate Buffer System	411
Phosphate Buffer System	413
Proteins Are Important Intracellular Buffers	413
Respiratory Regulation of Acid-Base Balance	414
Renal Control of Acid-Base Balance	415
Secretion of H <sup>+</sup> and Reabsorption of HCO <sub>3</sub> <sup>-</sup> by the Renal Tubules	416
Combination of Excess H <sup>+</sup> With Phosphate and Ammonia Buffers in the Tubule Generates “New” HCO <sub>3</sub> <sup>-</sup>	418
Quantifying Renal Acid-Base Excretion	420
Renal Correction of Acidosis—Increased Excretion of H <sup>+</sup> and Addition of HCO <sub>3</sub> <sup>-</sup> to the Extracellular Fluid	421
Renal Correction of Alkalosis—Decreased Tubular Secretion of H <sup>+</sup> and Increased Excretion of HCO <sub>3</sub> <sup>-</sup>	422
Clinical Causes of Acid-Base Disorders	422

**CHAPTER 32****Diuretics, Kidney Diseases 427**

Diuretics and Their Mechanisms of Action	427
Kidney Diseases	429
Acute Kidney Injury	429

Chronic Kidney Disease Is Often Associated With Irreversible Loss of Functional Nephrons	432	Conditions That Cause Excessive Bleeding in Humans	490
Treatment of Renal Failure by Transplantation or by Dialysis With an Artificial Kidney	440	Thromboembolic Conditions	491
		Anticoagulants for Clinical Use	492
		Blood Coagulation Tests	493

## UNIT VI

### Blood Cells, Immunity, and Blood Coagulation

#### CHAPTER 33

<b>Red Blood Cells, Anemia, and Polycythemia</b>	<b>445</b>
Red Blood Cells (Erythrocytes)	445
Anemias	452
Polycythemia	453

#### CHAPTER 34

<b>Resistance of the Body to Infection: I. Leukocytes, Granulocytes, the Monocyte-Macrophage System, and Inflammation</b>	<b>455</b>
Leukocytes (White Blood Cells)	455
Neutrophils and Macrophages Defend Against Infections	457
Monocyte-Macrophage Cell System (Reticuloendothelial System)	458
Inflammation: Role of Neutrophils and Macrophages	460
Eosinophils	462
Basophils	462
Leukopenia	463
Leukemias	463

#### CHAPTER 35

<b>Resistance of the Body to Infection: II. Immunity and Allergy</b>	<b>465</b>
Acquired (Adaptive) Immunity	465
Allergy and Hypersensitivity	475

#### CHAPTER 36

<b>Blood Types; Transfusion; Tissue and Organ Transplantation</b>	<b>477</b>
Antigenicity Causes Immune Reactions of Blood	477
O-A-B Blood Types	477
Rh Blood Types	479
Transplantation of Tissues and Organs	481

#### CHAPTER 37

<b>Hemostasis and Blood Coagulation</b>	<b>483</b>
Hemostasis Events	483
Mechanism of Blood Coagulation	485

## UNIT VII

### Respiration

#### CHAPTER 38

<b>Pulmonary Ventilation</b>	<b>497</b>
Mechanics of Pulmonary Ventilation	497
Pulmonary Volumes and Capacities	501
Alveolar Ventilation	503
Functions of the Respiratory Passageways	504

#### CHAPTER 39

<b>Pulmonary Circulation, Pulmonary Edema, Pleural Fluid</b>	<b>509</b>
Physiological Anatomy of the Pulmonary Circulatory System	509
Pressures in the Pulmonary System	509
Blood Volume of the Lungs	510
Blood Flow Through the Lungs and Its Distribution	510
Effect of Hydrostatic Pressure Gradients in the Lungs on Regional Pulmonary Blood Flow	511
Pulmonary Capillary Dynamics	513
Fluid in the Pleural Cavity	515

#### CHAPTER 40

<b>Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane</b>	<b>517</b>
Physics of Gas Diffusion and Gas Partial Pressures	517
Compositions of Alveolar Air and Atmospheric Air Are Different	519
Diffusion of Gases Through the Respiratory Membrane	521

#### CHAPTER 41

<b>Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids</b>	<b>527</b>
Transport of Oxygen From the Lungs to the Body Tissues	527
Transport of Carbon Dioxide in the Blood	534
Respiratory Exchange Ratio	536

#### CHAPTER 42

<b>Regulation of Respiration</b>	<b>539</b>
Respiratory Center	539
Chemical Control of Respiration	541

Peripheral Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control	542
Regulation of Respiration During Exercise	545
Other Factors That Affect Respiration	546

## CHAPTER 43

## Respiratory Insufficiency— Pathophysiology, Diagnosis, Oxygen Therapy

Useful Methods for Studying Respiratory Abnormalities	549
Pathophysiology of Specific Pulmonary Abnormalities	551
Hypoxia and Oxygen Therapy	554
Hypercapnia—Excess Carbon Dioxide in the Body Fluids	556
Artificial Respiration	556

## UNIT VIII

## Aviation, Space, and Deep-Sea Diving Physiology

## CHAPTER 44

## Aviation, High Altitude, and Space Physiology

Effects of Low Oxygen Pressure on the Body	561
Effects of Acceleratory Forces on the Body in Aviation and Space Physiology	565
"Artificial Climate" in the Sealed Spacecraft	567
Weightlessness in Space	567

## CHAPTER 45

## Physiology of Deep-Sea Diving and Other Hyperbaric Conditions

Effect of High Partial Pressures of Individual Gases on the Body	569
Self-Contained Underwater Breathing Apparatus (SCUBA) Diving	573
Special Physiological Problems in Submarines	574
Hyperbaric Oxygen Therapy	574

## UNIT IX

## The Nervous System: A. General Principles and Sensory Physiology

## CHAPTER 46

## Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters

General Design of the Nervous System	577
Major Levels of Central Nervous System Function	579
Comparison of the Nervous System to a Computer	580
Central Nervous System Synapses	580
Some Special Characteristics of Synaptic Transmission	592

## CHAPTER 47

## Sensory Receptors, Neuronal Circuits for Processing Information

Types of Sensory Receptors and the Stimuli They Detect	595
Transduction of Sensory Stimuli Into Nerve Impulses	596
Transmission of Signals of Different Intensity in Nerve Tracts—Spatial and Temporal Summation	600
Transmission and Processing of Signals in Neuronal Pools	601
Instability and Stability of Neuronal Circuits	605

## CHAPTER 48

## Somatic Sensations: I. General Organization, the Tactile and Position Senses

Classification of Somatic Senses	607
Detection and Transmission of Tactile Sensations	607
Sensory Pathways for Transmitting Somatic Signals Into the Central Nervous System	609
Transmission in the Dorsal Column–Medial Lemniscal System	609
Transmission of Less Critical Sensory Signals in the Anterolateral Pathway	616
Some Special Aspects of Somatosensory Function	618

## CHAPTER 49

## Somatic Sensations: II. Pain, Headache, and Thermal Sensations

Types of Pain and Their Qualities—Fast Pain and Slow Pain	621
Pain Receptors and Their Stimulation	621
Dual Pathways for Transmission of Pain Signals Into the Central Nervous System	622
Pain Suppression (Analgesia) System in the Brain and Spinal Cord	625
Referred Pain	626
Visceral Pain	626
Some Clinical Abnormalities of Pain and Other Somatic Sensations	628
Headache	629
Thermal Sensations	630

**UNIT X****The Nervous System:  
B. The Special Senses****CHAPTER 50**

<b>The Eye: I. Optics of Vision</b>	<b>635</b>
Physical Principles of Optics	635
Optics of the Eye	638
Fluid System of the Eye—Intraocular Fluid	644

**CHAPTER 51**

<b>The Eye: II. Receptor and Neural Function of the Retina</b>	<b>647</b>
Anatomy and Function of the Structural Elements of the Retina	647
Photochemistry of Vision	649
Color Vision	654
Neural Function of the Retina	655

**CHAPTER 52**

<b>The Eye: III. Central Neurophysiology of Vision</b>	<b>661</b>
Visual Pathways	661
Organization and Function of the Visual Cortex	662
Neuronal Patterns of Stimulation During Analysis of the Visual Image	664
Eye Movements and Their Control	666
Autonomic Control of Accommodation and Pupillary Aperture	669

**CHAPTER 53**

<b>The Sense of Hearing</b>	<b>673</b>
Tympanic Membrane and the Ossicular System	673
Cochlea	674
Central Auditory Mechanisms	679
Hearing Abnormalities	682

**CHAPTER 54**

<b>The Chemical Senses—Taste and Smell</b>	<b>685</b>
Sense of Taste	685
Sense of Smell	688

**UNIT XI****The Nervous System: C. Motor and Integrative Neurophysiology****CHAPTER 55**

<b>Motor Functions of the Spinal Cord; the Cord Reflexes</b>	<b>695</b>
Organization of the Spinal Cord for Motor Functions	695

Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—and Their Roles in Muscle Control	697
Flexor Reflex and the Withdrawal Reflexes	702
Crossed Extensor Reflex	703
Reciprocal Inhibition and Reciprocal Innervation	703
Reflexes of Posture and Locomotion	704
Scratch Reflex	705
Spinal Cord Reflexes That Cause Muscle Spasm	705
Autonomic Reflexes in the Spinal Cord	705
Spinal Cord Transection and Spinal Shock	705

**CHAPTER 56**

<b>Cortical and Brain Stem Control of Motor Function</b>	<b>707</b>
Motor Cortex and Corticospinal Tract	707
Control of Motor Functions by the Brain Stem	713
Vestibular Sensations and Maintenance of Equilibrium	714
Functions of Brain Stem Nuclei in Controlling Subconscious, Stereotyped Movements	719

**CHAPTER 57**

<b>Contributions of the Cerebellum and Basal Ganglia to Overall Motor Control</b>	<b>721</b>
The Cerebellum and Its Motor Functions	721
The Basal Ganglia and Their Motor Functions	730
Integration of the Many Parts of the Total Motor Control System	735

**CHAPTER 58**

<b>Cerebral Cortex, Intellectual Functions of the Brain, Learning, and Memory</b>	<b>737</b>
Physiological Anatomy of the Cerebral Cortex	737
Functions of Specific Cortical Areas	738
Function of the Brain in Communication—Language Input and Language Output	743
Function of the Corpus Callosum and Anterior Commissure to Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres	745
Thoughts, Consciousness, and Memory	745

**CHAPTER 59**

<b>Behavioral and Motivational Mechanisms of the Brain—The Limbic System and the Hypothalamus</b>	<b>751</b>
Activating—Driving Systems of the Brain	751
Limbic System	754
The Hypothalamus, a Major Control Headquarters for the Limbic System	755

Specific Functions of Other Parts of the Limbic System	759		
<b>CHAPTER 60</b>		<b>CHAPTER 64</b>	
<b>States of Brain Activity—Sleep, Brain Waves, Epilepsy, Psychoses, and Dementia</b>	<b>763</b>	<b>Propulsion and Mixing of Food in the Alimentary Tract</b>	<b>807</b>
Sleep	763	Ingestion of Food	807
Brain Waves	766	Motor Functions of the Stomach	809
Seizures and Epilepsy	768	Movements of the Small Intestine	812
Psychotic Behavior—Roles of Specific Neurotransmitter Systems	770	Movements of the Colon	814
Alzheimer's Disease—Amyloid Plaques and Depressed Memory	771	Other Autonomic Reflexes That Affect Bowel Activity	816
<b>CHAPTER 61</b>		<b>CHAPTER 65</b>	
<b>The Autonomic Nervous System and the Adrenal Medulla</b>	<b>773</b>	<b>Secretory Functions of the Alimentary Tract</b>	<b>817</b>
General Organization of the Autonomic Nervous System	773	General Principles of Alimentary Tract Secretion	817
Basic Characteristics of Sympathetic and Parasympathetic Function	775	Secretion of Saliva	819
Autonomic Reflexes	782	Esophageal Secretion	821
Stimulation of Discrete Organs in Some Instances and Mass Stimulation in Other Instances by the Sympathetic and Parasympathetic Systems	783	Gastric Secretion	821
Pharmacology of the Autonomic Nervous System	784	Pancreatic Secretion	825
		Bile Secretion by the Liver	827
		Secretions of the Small Intestine	830
		Secretion of Mucus by the Large Intestine	831
		<b>CHAPTER 66</b>	
		<b>Digestion and Absorption in the Gastrointestinal Tract</b>	<b>833</b>
		Digestion of the Various Foods by Hydrolysis	833
		Basic Principles of Gastrointestinal Absorption	837
		Absorption in the Small Intestine	837
		Absorption in the Large Intestine: Formation of Feces	841
		<b>CHAPTER 67</b>	
		<b>Physiology of Gastrointestinal Disorders</b>	<b>843</b>
		Disorders of Swallowing and the Esophagus	843
		Disorders of the Stomach	843
		Disorders of the Small Intestine	845
		Disorders of the Large Intestine	846
		General Disorders of the Gastrointestinal Tract	847
		<b>UNIT XIII</b>	
		<b>Metabolism and Temperature Regulation</b>	
<b>CHAPTER 62</b>		<b>CHAPTER 68</b>	
<b>Cerebral Blood Flow, Cerebrospinal Fluid, and Brain Metabolism</b>	<b>787</b>	<b>Metabolism of Carbohydrates and Formation of Adenosine Triphosphate</b>	<b>853</b>
Cerebral Blood Flow	787	Release of Energy From Foods and "Free Energy"	853
Cerebrospinal Fluid System	790	Adenosine Triphosphate Is the "Energy Currency" of the Body	853
Brain Metabolism	794		
<b>UNIT XII</b>			
<b>Gastrointestinal Physiology</b>			
<b>CHAPTER 63</b>			
<b>General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation</b>	<b>797</b>		
General Principles of Gastrointestinal Motility	797		
Neural Control of Gastrointestinal Function—Enteric Nervous System	799		
Hormonal Control of Gastrointestinal Motility	802		
Functional Types of Movements in the Gastrointestinal Tract	803		
Gastrointestinal Blood Flow—Splanchnic Circulation	804		

Central Role of Glucose in Carbohydrate Metabolism	854	Dietary Balances	887
Transport of Glucose Through the Cell Membrane	854	Regulation of Food Intake and Energy Storage	889
Glycogen Is Stored in the Liver and Muscle	855	Obesity	894
Release of Energy From Glucose by the Glycolytic Pathway	856	Inanition, Anorexia, and Cachexia	896
Formation of Large Quantities of ATP by Oxidation of Hydrogen—the Process of Oxidative Phosphorylation	858	Starvation	897
Summary of ATP Formation During the Breakdown of Glucose	859	Vitamins	897
Anaerobic Release of Energy—Anaerobic Glycolysis	860	Mineral Metabolism	900
Release of Energy From Glucose by the Pentose Phosphate Pathway	861		
Formation of Carbohydrates From Proteins and Fats—Gluconeogenesis	861		
<b>CHAPTER 69</b>		<b>CHAPTER 73</b>	
<b>Lipid Metabolism</b>	863	<b>Energetics and Metabolic Rate</b>	903
Basic Chemical Structure of Triglycerides (Neutral Fat)	863	Adenosine Triphosphate Functions as an “Energy Currency” in Metabolism	903
Transport of Lipids in the Body Fluids	863	Control of Energy Release in the Cell	905
Fat Deposits	865	Metabolic Rate	906
Use of Triglycerides for Energy: Formation of Adenosine Triphosphate	866	Energy Metabolism—Factors That Influence Energy Output	907
Regulation of Energy Release From Triglycerides	869		
Phospholipids and Cholesterol	870	<b>CHAPTER 74</b>	
Atherosclerosis	872	<b>Body Temperature Regulation and Fever</b>	911
		Normal Body Temperatures	911
<b>CHAPTER 70</b>		Body Temperature Is Controlled by Balancing Heat Production and Heat Loss	911
<b>Protein Metabolism</b>	875	Regulation of Body Temperature—Role of the Hypothalamus	915
Basic Properties of Proteins	875	Abnormalities of Body Temperature Regulation	919
Transport and Storage of Amino Acids	875		
Functional Roles of the Plasma Proteins	877		
Hormonal Regulation of Protein Metabolism	880		
<b>CHAPTER 71</b>		<b>UNIT XIV</b>	
<b>The Liver as an Organ</b>	881	<b>Endocrinology and Reproduction</b>	
Physiological Anatomy of the Liver	881		
Hepatic Vascular and Lymph Systems	881	<b>CHAPTER 75</b>	
Metabolic Functions of the Liver	883	<b>Introduction to Endocrinology</b>	925
Protein Metabolism	883	Coordination of Body Functions by Chemical Messengers	925
Measurement of Bilirubin in the Bile as a Clinical Diagnostic Tool	884	Chemical Structure and Synthesis of Hormones	925
		Hormone Secretion, Transport, and Clearance From the Blood	929
<b>CHAPTER 72</b>		Mechanisms of Action of Hormones	930
<b>Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals</b>	887	Measurement of Hormone Concentrations in the Blood	936
Energy Intake and Output Are Balanced Under Steady-State Conditions	887		
		<b>CHAPTER 76</b>	
		<b>Pituitary Hormones and Their Control by the Hypothalamus</b>	939
		Pituitary Gland and Its Relation to the Hypothalamus	939
		Hypothalamus Controls Pituitary Secretion	940
		Physiological Functions of Growth Hormone	942
		Posterior Pituitary Gland and Its Relation to the Hypothalamus	948
