NOTICE

The authors and publisher have made every effort to ensure that the patient care recommended herein, including choice of drugs and drug dosages, is in accord with the accepted standards and practice at the time of publication. However, since research and regulation constantly change clinical standards, the reader is urged to check the product information sheet included in the package of each drug, which includes recommended doses, warnings, and contraindications. This is particularly important with new or infrequently used drugs.

PREFACE

The publication of the proceedings of the 25th anniversary meeting of the American Academy of Facial Plastic and Reconstructive Surgery constitutes a meaningful milestone that prompts reminiscences, reflections, and an anticipation of the future.

It is with a sense of fulfillment that we witness the growth of our organization from its humble but resourceful beginning to its present status as a large dynamic academy. Perhaps an even greater joy is the membership's general participation in and genuine enthusiasm for our Fifth International Symposium and this, the subsequent publication of the proceedings.

This volume reflects the most contemporary of ideas and subjects of broad and varying interest in the field of facial plastic and reconstructive surgery. Also included are basic science subjects as they relate to surgery, and fundamental research not necessarily relegated to the operating room. Our academy has maintained a threefold purpose at all its scientific meetings. These include critical discussion of recent clinical advances, new developments and basic sciences as they relate to the practice of facial plastic surgery, and of equal importance, the impact of social and economic issues on our patients and their care.

It is indeed an extreme honor to edit a volume such as this. It is my belief that it represents an important scholarly educational contribution by the Academy and its member surgeons.

Fred J. Stucker, M.D., F.A.C.S.

DEDICATION

This volume is dedicated to the first 25 presidents of the American Academy of Facial Plastic and Reconstructive Surgery. The individual vision, courage, and commitment of these people have enabled this academy to realize its potential as the world's leading organization in the field of facial plastic surgery.
