Elementary Molecular Quantum Mechanics: Mathematical Methods and Applications

To Charles Alfred Coulson

To Paola, my wife

To my former Quantum Chemistry students

Giorgio Aliani, Mauro Amelio, Luca Arcesi, Paolo Armanino, Cristina Artini, Roberto Austi, Fiorenza Azzurri, Monica Beggiato, Walter Bellini, Angelo Benazzo, Maurizio Benzo, Anna Berti, Luca Berti, Federico Bianchi, Anja Bijedic Mitranic, Sergio Bisio, Claudio Boffito, Vito Boido, Gabriella Borzone, Carlo Bottero, Andrea Briatore, Stefano Brusco, Santino Bruzzone, Giuseppe Burgisi, Vincenzo Buscaglia, Fabio Canepa, Maria Rosaria Carcassi, Francesca Carosi, Silvio Carrettin, Angela Cartosio, Massimo Casanova, Danilo Cassaglia, Rosana Cavalli, Marino Cervetto, Roberta Cesari, Silvia Ciuffini, Fabrizio Colace, Bianca Cosma, Camilla Costa, Aldo Curti, Marco Delfino, Giovanna Dellepiane, Fabrizio De Melas, Serena De Negri, Maria Grazia Desirello, Silvia De Vito, Ilaria Devoti, Daniele Duce, Roberto Eggenhoffner, Leandro Esposito, Sandro Ferraro, Alessandra Ferretti, Dino Romano Ferro, Giuseppe Figari, Maria Luisa Fornasini, Giuseppe Francese, Ambra Frare, Silvano Fuso, Massimo Gambetta, Silvia Garbarino, Paolo Gatti, Chiara Ghiron, Michele Giardina, Claudia Grandi, Paola Guarnone, Marina Guenza, Roberto La Ferla, Marco Leoncini, Serena Leporatti, Alessandra Leprini, Franco Lichene, Nara Liessi, Andrea Lionello, Romeo Losso, Mattia Lucchini, Costanzo Luzzago, Filippo Maida, Alberto Martinelli, Roberta Martolini, Bruno Matteazzi, Franco Merlo, Valeria Merlo, Giovan Battista Minetto, Tomaso Munari, Riccardo Musenich, Gian Franco Musso, Riccardo Narizzano, Marco Nencioni, Sergio Novelli, Riccardo Olivieri Colombo, Massimo Ottonelli, Donatella Paci, Silvia Palacio Azcona, Andrea Palenzona, Christopoulos Panagiotis, Laura Pardo, Paolo Parodi, Lise Pascale, Stefano Passalacqua, Elisa Pastore, Marta Patrone, Gianfranco Patrucco, Enrica Perrotta, Roberto Peverati, Matteo Piccardo, Giulio Pieretti, Francesca Pin, Arnaldo Rapallo, Marcello Rasparini, Anna Ravina, Renzo Rizzo, Caterina Rocca, Giuseppe Roncallo, Massimiliano Rossi, Marina Rui, Paolo Russo, Paolo Sacco, Carlo Scapolla, Daniele Scavo, Giovanna Schmid, Andrea Sciutto, Andrea Siciliano, Lucia Somma, Giuseppe Tassano, Anton Thumiger, Giuseppe Tonello, Giulio Andrea Tozzi, Riccardo Tubino, Alessandro Valente, Vito Vece, Massimo Vizza, Gilberto Vlaich, Ugo Zanelli, Maria Teresa Zannetti

Preface

The idea of a book presenting in a simple way most of the essential mathematical tools beyond elementary calculus, and possibly entitled *Mathematical Methods in Molecular Quantum Mechanics*, grew for some time in the author's mind during the many years of teaching and research at the University of Genoa. In 2007, Elsevier published a teaching book by the author for graduate university students of chemistry and physics entitled *Elementary Methods of Molecular Quantum Mechanics*, the book being intended as a bridge between the classic elementary Coulson's *Valence* and the more advanced McWeeny's *Methods of Molecular Quantum Mechanics*. After 5 years, this book necessarily needed some revision and restyling to eliminate various misprints.

After an intense correspondence with the Elsevier's editorial board, to avoid the narrowness of a single mathematical text, it was decided to merge the two books into the present single book, entitled *Elementary Molecular Quantum Mechanics: Mathematical Methods and Applications*. The new book is mostly based on the content of the old one, of which it maintains the interesting elementary approach to quantum chemical applications, and contains a new introductory part more specifically devoted to mathematical methods. So, the new book can be considered as a deeply revised edition of the former Elsevier's book with a sensibly enlarged mathematical part. It is hoped that, in this way, the new book can meet better the students' needs, enlarging its usability even for university students of applied maths, at least in their first years.

The first part of the book is not intended to cover all mathematical topics, rather it is intended to offer the reader in a plane way and more in detail many of the building stones of the advanced mathematics needed in working applications of Quantum Mechanics to Quantum Chemistry. For the same reason, some important topics are omitted, such as functional, numerical, and computational analysis, but these arguments are so wide that they would imply separate books in themselves. For them, the reader should be addressed to specific treatises or to internet resources. The required background for students of physics and chemistry is still that of a few semester courses in mathematical analysis and physics.

The book might help as an auxiliary advanced mathematical and physical text of about 60 h for university students of chemistry, physics, and applied maths.

The main differences with the former Elsevier's book are the following. (1) The shifting to the new Chapter 1 of both the fundamental approximation methods of Quantum Mechanics, the variational method and the various perturbative approaches (formerly partly given in Chapters 5 and 11), (2) the introduction of three new mathematical chapters devoted to the solution of the partial differential equations of Quantum Mechanics (Chapter 3), to the theory of special functions, including Fourier and Laplace transforms and Green's functions (Chapter 4), to the functions of a complex variable and the evaluation of integrals of a real variable by the method of residues (Chapter 5), (3) the subdivision of the former unusually large Chapter 7 into the two new Chapters 14 and 16, the first devoted to the theory of model Hamiltonians (Hartree–Fock, Hückel and approximate MO methods), the second to the correlation problem and to the Post-Hartree–Fock methods, (4) the accurate revision of the old Chapter 12 on atomic and molecular interactions, which was completely re-written and updated in the new Chapter 17, (5) the addition of the Gaussian GTO approach besides the prevalent STO approach in the evaluation of multicentre molecular integrals in the new Chapter 18, (6) the addition of Chapter 19,

which introduces the reader to the still actually growing field of relativistic molecular quantum mechanics, starting from the Dirac's equation for the relativistic electron up to its major applications to atomic and molecular systems, and, lastly, (7) a short outlook to the problem of molecular vibrations (Chapter 20) with particular emphasis to the vibronic interactions, a topic which was completely omitted in the former book. The original feature of the former book which completed each chapter with *problems* and *solved problems* was maintained and enlarged in the new book.

The contents of the new book are given in the introductory section *Contents*, where all items in each chapter are specified in detail, so that they will be omitted here.

A wide list of alphabetically ordered references, mostly taken from original research papers, and author and subject indices complete the book.

Thanks are due to my son Mario and his daughter Laura, who prepared the drawings at the computer, to Professor Giuseppe Figari, who helped much during the many years of research at the Department of Chemistry of the University of Genoa, to Dr Michele Battezzati for useful suggestions and discussions on specific points, to Dr Tomas Martišius of Vilnius (Lithuania), who provided the software for translating from Latex to Word, which made this work possible, and to Dr Camilla Costa, who helped in the translation of the former published text from Latex to Word. Particularly warm thanks are due to the Elsevier' Senior Acquisition Editor, Mr Adrian Shell, PhD, for his patience in discussing the best structure of the new book, and to Dr Egbert van Wezenbeek for his constant encouragement and support. Finally, I acknowledge the Italian Ministry for Education University and Research (MIUR) and the University of Genoa for their financial support during the many years of scientific research of the Genoa group.

My last thanks are for my wife Paola, who supported me strongly during the long time this work was in progress.

Valerio Magnasco

Genoa, 30th November 2012

PART 1 MATHEMATICAL METHODS

CHAPTER 1 Mathematical foundations and approximation methods	3
1.1. Mathematical Foundations	4
1.1.1. Regular functions.....	4
1.1.2. Schmidt orthogonalization.....	5
1.1.3. Löwdin orthogonalization.....	8
1.1.4. Set of orthonormal functions and basis set.....	8
1.1.5. Linear operators.....	9
1.1.6. Hermitian operators	10
1.1.7. Expansion theorem	14
1.1.8. Basic principles of quantum mechanics.....	17
1.2. The variational method.....	19
1.2.1. Non-linear parameters	21
1.2.2. Linear parameters: the Ritz method.....	21
1.3. Perturbative Methods for Stationary States.....	25
1.3.1. RS perturbation theory	25
1.3.2. Second-order approximation methods in RS perturbation theory	32
1.3.3. BW perturbation theory	37
1.3.4. Perturbation methods without partitioning of the Hamiltonian	40
1.3.5. Perturbation theories including exchange (SAPTs).....	45
1.3.6. The moment method.....	53
1.4. The Wentzel–Kramers–Brillouin Method	55
1.5. Problems 1	59
1.6. Solved Problems	62
CHAPTER 2 Coordinate systems	69
2.1. Introduction.....	69
2.2. Systems of Orthogonal Coordinates.....	71
2.3. Generalized Coordinates.....	73
2.4. Cartesian Coordinates (x,y,z)	74
2.5. Spherical Coordinates (r,θ,φ)	74
2.6. Spheroidal Coordinates (μ,ν,φ)	75
2.7. Parabolic Coordinates (ξ,η,φ)	76
2.8. Problems 2	78
2.9. Solved Problems	80
CHAPTER 3 Differential equations in quantum mechanics	87
3.1. Introduction.....	88
3.2. Partial Differential Equations.....	88

3.3.	Separation of Variables.....	89
3.3.1.	The particle in a three-dimensional box	89
3.3.2.	The three-dimensional harmonic oscillator	91
3.3.3.	The atomic one-electron system	91
3.3.4.	The molecular one-electron system	93
3.3.5.	The hydrogen atom in a uniform electric field.....	96
3.4.	Solution by Series Expansion.....	98
3.5.	Solution Near Singular Points	100
3.6.	The One-Dimensional Harmonic Oscillator	101
3.7.	The Atomic One-Electron System	104
3.7.1.	Solution of the radial equation.....	105
3.7.2.	Solution of the Φ -equation.....	109
3.7.3.	Solution of the Θ -equation	109
3.7.4.	The hydrogen-like atomic orbitals	115
3.8.	The Hydrogen Atom in an Electric Field	117
3.9.	The Hydrogen Molecular Ion H_2^+	120
3.10.	The Stark Effect in Atomic Hydrogen.....	124
3.10.1.	Solution of the ξ -equation in the zero-field case.....	124
3.10.2.	The first-order Stark effect.....	128
3.11.	Appendix: Checking the Solutions.....	131
3.11.1.	The radial equation of the H-atom in spherical coordinates	131
3.11.2.	The Θ -equation of the H-atom in spherical coordinates.....	132
3.11.3.	The ξ -equation of the H-atom in parabolic coordinates.....	135
3.12.	Problems 3	135
3.13.	Solved Problems	137
CHAPTER 4	Special functions	151
4.1.	Introduction.....	152
4.2.	Legendre Functions	152
4.2.1.	Legendre polynomials and associated Legendre polynomials	152
4.2.2.	Recurrence relations for Legendre polynomials.....	154
4.2.3.	Series of Legendre polynomials.....	154
4.2.4.	Legendre functions of first and second kind	155
4.2.5.	Neumann's formula for the Legendre functions.....	157
4.3.	Laguerre Functions.....	158
4.3.1.	Laguerre polynomials and Laguerre functions	158
4.3.2.	Associated Laguerre polynomials	159
4.3.3.	Basic integrals over associated Laguerre functions.....	161
4.4.	Hermite Functions	163
4.4.1.	Hermite polynomials	163
4.4.2.	Hermite functions	164
4.4.3.	Integrals over Hermite functions.....	165
4.5.	Hypergeometric Functions	166
4.5.1.	Hypergeometric series and differential equation.....	166
4.5.2.	Confluent hypergeometric functions	168

4.6.	Bessel Functions	170
4.6.1.	Bessel functions of integral order	170
4.6.2.	Bessel functions of half-integral order	171
4.6.3.	Spherical Bessel functions	172
4.6.4.	Modified Bessel functions	176
4.7.	Functions Defined by Integrals	178
4.7.1.	The gamma function	178
4.7.2.	The incomplete gamma function	178
4.7.3.	From the gamma function to the exponential integral function	179
4.7.4.	The exponential integral function	180
4.7.5.	The generalized exponential integral function	181
4.7.6.	Further functions	181
4.8.	The Dirac δ-Function	184
4.9.	The Fourier Transform	185
4.10.	The Laplace Transform	188
4.11.	Spherical Tensors	190
4.11.1.	Spherical tensors in complex form	190
4.11.2.	Spherical tensors in real form	191
4.11.3.	Generalized spherical tensors	195
4.12.	Orthogonal Polynomials	195
4.13.	Padé Approximants	197
4.14.	Green's Functions	199
4.15.	Problems 4	202
4.16.	Solved Problems	203

CHAPTER 5 Functions of a complex variable 215

5.1.	Functions of a Complex Variable	215
5.1.1.	Complex numbers	215
5.1.2.	Functions of a complex variable	217
5.1.3.	Regular functions	218
5.1.4.	Elementary operations	219
5.1.5.	Power series of elementary functions	219
5.1.6.	Many-valued functions	223
5.2.	Complex Integral Calculus	223
5.2.1.	Line integrals	223
5.2.2.	Integrals in the complex plane and the Cauchy theorem	224
5.2.3.	Integration over a not simply connected domain	225
5.2.4.	Cauchy's integral representation	227
5.2.5.	Taylor's expansion around a singularity	228
5.2.6.	Laurent's expansion	228
5.2.7.	Zeros of a regular function	230
5.2.8.	Analytic continuation	230
5.3.	Calculus of Residues	232
5.3.1.	The residue theorem	232
5.3.2.	The Jordan lemma	234

5.3.3. Sum of non-convergent series	235
5.3.4. Evaluation of integrals of functions of real variable	238
5.4. Problems 5	241
5.5. Solved Problems	242
 CHAPTER 6 Matrices	 247
6.1. Definitions and Elementary Properties	247
6.2. The Partitioning of Matrices	248
6.3. Properties of Determinants	250
6.4. Special Matrices	255
6.5. The Matrix Eigenvalue Problem	256
6.6. Functions of Hermitian Matrices	261
6.6.1. Analytic functions	261
6.6.2. Projectors and canonical form	262
6.6.3. Examples	262
6.7. The Matrix Pseudoeigenvalue Problem	266
6.8. The Lagrange Interpolation Formula	268
6.9. The Cayley–Hamilton Theorem.....	270
6.10. The Eigenvalue Problem in Hückel’s Theory of the π Electrons of Benzene	270
6.10.1. General considerations	270
6.10.2. Unitary transformation diagonalizing the Hückel’s matrix	272
6.11. Problems 6	273
6.12. Solved Problems	278
 CHAPTER 7 Molecular symmetry	 297
7.1. Introduction.....	297
7.2. Symmetry and Quantum Mechanics	298
7.3. Molecular Symmetry	299
7.4. Symmetry Operations as Transformation of the Coordinate Axes	302
7.4.1. Passive and active representations of symmetry operations.....	302
7.4.2. Symmetry transformations in coordinate space.....	303
7.4.3. Symmetry operators and transformations in function space	305
7.4.4. Matrix representatives of symmetry operators	308
7.4.5. Similarity transformations.....	310
7.5. Applications	310
7.5.1. The fundamental theorem of symmetry	310
7.5.2. Selection rules	311
7.5.3. Ground state electron configuration of polyatomic molecules.....	312
7.6. Problems 7	313
7.7. Solved Problems	315
 CHAPTER 8 Abstract group theory	 323
8.1. Introduction.....	323
8.2. Axioms of Group Theory	324

8.3.	Examples of Groups.....	325
8.4.	Multiplication Table.....	326
8.5.	Subgroups.....	327
8.6.	Isomorphism.....	328
8.7.	Conjugation and Classes.....	331
8.8.	Direct-Product Groups.....	332
8.9.	Representations and Characters.....	333
8.10.	Irreducible Representations.....	338
8.11.	Projectors and Symmetry-Adapted Functions.....	340
8.12.	The Symmetric Group.....	345
8.13.	Molecular Point Groups.....	351
8.14.	Continuous Groups.....	353
8.15.	Rotation Groups.....	356
8.15.1.	Axial groups.....	356
8.15.2.	The spherical group.....	358
8.15.3.	Transformation properties of spherical harmonics.....	362
8.16.	Problems 8.....	364
8.17.	Solved Problems.....	368
CHAPTER 9	The electron spin	381
9.1.	Introduction.....	381
9.2.	Electron Spin according to Pauli and the Zeeman Effect.....	382
9.3.	Theory of One-Electron Spin.....	386
9.4.	Matrix Representation of Spin Operators.....	389
9.5.	Theory of Two-Electron Spin.....	392
9.6.	Theory of Many-Electron Spin.....	394
9.7.	The Kotani' Synthetic Method.....	397
9.8.	Löwdin' Spin Projection Operators.....	398
9.9.	Problems 9.....	400
9.10.	Solved Problems.....	402
CHAPTER 10	Angular momentum methods for atoms.....	417
10.1.	Introduction.....	417
10.2.	The Vector Model.....	418
10.2.1.	Coupling of angular momenta.....	418
10.2.2.	<i>LS</i> coupling and multiplet structure.....	421
10.3.	Construction of States of Definite Angular Momentum.....	425
10.3.1.	The matrix method.....	425
10.3.2.	The projection operator method.....	431
10.4.	An Outline of Advanced Methods for Coupling Angular Momenta.....	431
10.4.1.	Clebsch–Gordan coefficients and Wigner 3- <i>j</i> and 9- <i>j</i> symbols.....	431
10.4.2.	Gaunt coefficients and coupling rules.....	433
10.5.	Problems 10.....	434
10.6.	Solved Problems.....	437

PART 2 APPLICATIONS

CHAPTER 11	The physical principles of quantum mechanics	449
11.1.	The Orbital Model	449
11.2.	The Fundamental Postulates of Quantum Mechanics.....	450
11.2.1.	Correspondence between observables and operators	450
11.2.2.	State function and average values of observables.....	454
11.2.3.	Time evolution of state function.....	455
11.3.	The Physical Principles of Quantum Mechanics	456
11.3.1.	Wave-particle dualism	456
11.3.2.	Atomicity of matter.....	458
11.3.3.	Schroedinger's wave equation	459
11.3.4.	Born interpretation	460
11.3.5.	Measure of observables	461
11.4.	Problems 11.....	463
11.5.	Solved Problems.....	464
CHAPTER 12	Atomic orbitals.....	467
12.1.	Introduction	467
12.2.	Hydrogen-Like Atomic Orbitals.....	468
12.3.	Slater-Type Orbitals	473
12.4.	Gaussian-Type Orbitals.....	475
12.5.	Problems 12.....	477
12.6.	Solved Problems.....	478
CHAPTER 13	Variational calculations	483
13.1.	Introduction	483
13.2.	The Variational Method	484
13.2.1.	Variational principles in first order.....	484
13.2.2.	Variational approximations	485
13.2.3.	Basis functions and variational parameters	486
13.3.	Non-Linear Parameters	487
13.3.1.	The 1s ground state of the atomic one-electron system	487
13.3.2.	The first 2s, 2p excited states of the atomic one-electron system	490
13.3.3.	The 1s ² ground state of the atomic two-electron system	493
13.4.	Linear Parameters and the Ritz Method.....	496
13.5.	Atomic Applications of the Ritz Method.....	497
13.5.1.	The first 1s2s excited state of the atomic two-electron system	497
13.5.2.	The first 1s2p excited state of the atomic two-electron system	499
13.5.3.	Results for hydrogen-like AOs	502
13.6.	Molecular Applications of the Ritz Method.....	503
13.6.1.	The ground and first excited state of the H ₂ ⁺ molecular ion.....	503
13.6.2.	The interaction energy and its components.....	505
13.7.	Variational Principles in Second Order	510
13.7.1.	The dipole polarizability of the H atom.....	510
13.7.2.	The London attraction between two ground-state H atoms.....	512

13.8.	Problems 13.....	514
13.9.	Solved Problems.....	517
CHAPTER 14	Many-electron wavefunctions and model Hamiltonians	533
14.1.	Introduction	534
14.2.	Antisymmetry of the Electronic Wavefunction and the Pauli's Principle	534
14.2.1.	Two-electron wavefunctions	534
14.2.2.	Many-electron wavefunctions and the Slater method.....	535
14.3.	Electron Distribution Functions.....	539
14.3.1.	One-electron distribution functions: general definitions.....	539
14.3.2.	Electron density and spin density.....	540
14.3.3.	Two-electron distribution functions: general definitions	543
14.4.	Average Values of One- and Two-Electron Operators	544
14.4.1.	Symmetrical sums of one-electron operators.....	544
14.4.2.	Symmetrical sums of two-electron operators.....	545
14.4.3.	Average value of the electronic energy	546
14.5.	The Slater's Rules	546
14.6.	Pople's Two-Dimensional Chart of Quantum Chemistry	548
14.7.	Hartree-Fock Theory for Closed Shells	550
14.7.1.	Basic theory and properties of the fundamental invariant ρ	550
14.7.2.	Electronic energy for the HF wavefunction	552
14.7.3.	Roothaan's variational derivation of the HF equations.....	553
14.7.4.	Hall-Roothaan's formulation of the LCAO-MO-SCF equations	555
14.7.5.	Mulliken population analysis.....	558
14.7.6.	Atomic bases in quantum chemical calculations	561
14.7.7.	Localization of molecular orbitals.....	565
14.8.	Hückel's Theory	567
14.8.1.	Recurrence relation for the linear chain.....	568
14.8.2.	General solution for the linear chain.....	569
14.8.3.	General solution for the closed chain.....	570
14.8.4.	Alternant hydrocarbons.....	572
14.8.5.	An introduction to band theory of solids	577
14.9.	Semiempirical MO Methods.....	579
14.9.1.	Extended Hückel's theory	580
14.9.2.	The CNDO method.....	580
14.9.3.	The INDO method	584
14.9.4.	The ZINDO method.....	584
14.10.	Problems 14.....	585
14.11.	Solved Problems.....	588
CHAPTER 15	Valence bond theory and the chemical bond	599
15.1.	Introduction	600
15.2.	The Chemical Bond in H_2	601
15.2.1.	Failure of the MO theory for ground-state H_2	602
15.2.2.	The Heitler-London theory for H_2	608

CHAPTER 18	Evaluation of molecular integrals	789
18.1.	Introduction	790
18.2.	The Basic Integrals	790
18.2.1.	The indefinite integral	790
18.2.2.	Definite integrals and auxiliary functions	791
18.3.	One-Centre Integrals	793
18.3.1.	One-electron integrals	793
18.3.2.	Two-electron integrals	795
18.4.	Evaluation of the Electrostatic Potential J_{1s}	795
18.4.1.	Spherical coordinates	795
18.4.2.	Spheroidal coordinates	797
18.5.	The $(1s^2 1s^2)$ Electron Repulsion Integral	798
18.5.1.	Same orbital exponent	798
18.5.2.	Different orbital exponents	799
18.6.	General Formula for One-centre Two-electron Integrals	799
18.7.	Two-centre Integrals Over $1s$ STOs	800
18.7.1.	One-electron integrals	801
18.7.2.	Two-electron integrals	803
18.7.3.	Limiting values of two-centre integrals	809
18.8.	On the General Formulae for Two-centre Integrals	812
18.8.1.	Spheroidal coordinates	812
18.8.2.	Spherical coordinates	813
18.9.	A Short Note on Multicentre Integrals	814
18.9.1.	Three-centre one-electron integral over $1s$ STOs	814
18.9.2.	Four-centre two-electron integral over $1s$ STOs	815
18.10.	Molecular Integrals Over GTOs	817
18.10.1.	Some properties of Gaussian functions	817
18.10.2.	Integrals of Gaussian functions	819
18.10.3.	Integral transforms	820
18.10.4.	Molecular integrals	822
18.11.	Problems 18	824
18.12.	Solved Problems	825
CHAPTER 19	Relativistic molecular quantum mechanics	831
19.1.	Introduction	831
19.2.	The Schroedinger's Relativistic Equation	832
19.3.	The Klein-Gordon Relativistic Equation	833
19.4.	Dirac's Relativistic Equation for the Electron	834
19.5.	Spinors: Small and Large Components	835
19.6.	Dirac's Equation for a Central Field	838
19.6.1.	Separation of the radial equation	841
19.6.2.	The hydrogen-like atom	843
19.7.	One-Electron Molecular Systems: H_2^+ and HHe^{+2}	846
