Cover Printing: Lehigh Press

Printing and Binding: R. R. Donnelley & Sons

PREFACE

I wrote in the first edition of this text that my goal was to produce a readable and effective teaching text—one that presents only those subjects needed for a brief course in organic chemistry but that keeps the important pedagogical tools commonly found in larger books. Explanations are clear, the artwork is carefully done, important points are repeated, and varied end-of-chapter learning tools are used. The result, I believe, is a book that is easier to read and learn from than other short organic chemistry texts.

All the features that made the first two editions a success have been improved, and new ones have been added in this third edition. Among the changes:

- Full color has been added to Chapter 6 on stereochemistry and to Chapters 14–17 on biomolecules.
- A new chapter has been added. Titled “The Organic Chemistry of Metabolic Pathways,” Chapter 17 ties together many common laboratory organic reactions with their biochemical counterparts.
- The writing, already clear and accessible, has been further refined at the sentence level on every page.
- Problem sets have been expanded, and many new drill problems have been added.
- Numerous reactions and reagents judged too complex for a course at this level have been removed from this edition.
- Review material on bonding, electronegativity, and acid–base chemistry has been added to Chapter 1.
- New “interludes” on toxicity and risk, ethanol, and magnetic resonance imaging have been added.

Organization

The primary organization of this book is by functional group, beginning in Chapter 2 with alkanes and going on to more complex compounds.

Within this primary organization, more emphasis is placed on explaining the fundamental similarities of organic reactions than is common in other short texts. Chapter 11, "Carbonyl Alpha-Substitution Reactions and Condensation Reactions," for example, helps to remove the artificial lines between ketones and esters by showing how all carbonyl compounds undergo similar reactions. Memorization is minimized and understanding maximized with this approach.

Spectroscopy

Spectroscopy is treated as a tool, not as a specialized field of study. Infrared, ultraviolet, ^{13}C NMR, and ^1H NMR spectroscopies are all covered by showing the kind of information that can be derived from each and how each can be used to answer specific structural questions.

Nomenclature

The IUPAC system of nomenclature is used throughout. For the most part, this involves the use of systematic names, although a few IUPAC-approved nonsystematic names such as acetic acid, acetone, ethylene, and phenol are also employed. Since it's unlikely that these few common names will disappear from everyday use in the near future, it's probably best for students to learn them.

Coverage

The coverage in this book is up-to-date, reflecting important advances of the past decade. For example, ^{13}C NMR is introduced as a routine spectroscopic tool, equal in importance to ^1H NMR. Similarly, the chemistry of nucleic acids is covered, including a section on DNA sequencing by the Maxam-Gilbert method.

Interludes

Brief "interludes" are included at the end of each chapter. Meant to serve as short breathers between chapters, these interludes show interesting applications of organic chemistry to industrial and biological systems. They can be covered by the instructor or left for student reading.

Practice Problems

Each chapter contains many worked-out examples that illustrate how problems can be solved. Each practice problem and solution is then followed by a similar problem for the reader to solve. These worked-out examples are valuable because of their appearance in the text, but are not meant to serve as a replacement for the accompanying *Study Guide and Solutions Manual*.

Pedagogy

In addition to the above features, every effort has been made to make this book as effective, clear, and readable as possible—in short, to make it easy to learn from:

- Paragraphs start with summary sentences.
- Transitions between paragraphs and between topics are smooth.
- Extensive use is made of computer-generated, three-dimensional art and carefully rendered stereochemical formulas.
- Extensive cross-referencing to earlier material ties ideas together.
- A second color is used to indicate the changes that occur during reactions, and full color is used for clarity in the chapters on stereochemistry and biomolecules.
- More than 900 problems are included, both within the text and at the end of every chapter. These include both drill and thought problems.
- Key terms are defined in the margin next to where they first appear in the text.
- An innovative vertical format is used to explain reaction mechanisms. The mechanisms are printed vertically, while explanations of the changes taking place in each step are printed next to the reaction arrow. This format allows the reader to see easily what is occurring at each step in a reaction without having to jump back and forth between the text and structures.

Study Guide and Solutions Manual

A carefully prepared *Study Guide and Solutions Manual* accompanies this text. Written by Susan McMurry, this companion volume answers all in-text and end-of-chapter problems and explains in detail how answers are obtained. In addition, many valuable supplemental materials are given, including a list of study goals for each chapter, a glossary, a summary of name reactions, a summary of organic reaction mechanisms, a summary of the uses of important reagents, tables of spectroscopic information, and a list of suggested readings.

ACKNOWLEDGMENTS

I sincerely thank the many people whose help and suggestions were so valuable in the creation of this book. Foremost is my wife Susan who read, criticized, and improved all aspects of the text, and who authored the accompanying *Study Guide and Solutions Manual*. Among the reviewers providing thoughtful comments were Claudia P. Cartaya, Appalachian State University—Rainking Science Center; Mildred V. Hall, Pennsylvania State University—Dubois Campus; John A. Miller, Western Washington University; David Minter, Texas Christian University; Roger K. Murray, University of Delaware; George V. Odell, Oklahoma State University; Stanley Raucher, University of Washington; David J. Rislove, Winona State University; Ronald Starkey, University of Wisconsin; and Kathleen M. Trahanovsky, Iowa State University.

Special thanks are due Harvey Pantzis, Lisa Moller, Joan Marsh, Phyllis Niklas, Kathy Lee, and all of the Brooks/Cole staff for their usual fine work.

A NOTE FOR STUDENTS

We have similar goals. Yours is to learn organic chemistry; mine is to do everything possible to help you learn. It's going to require work on your part, but the following suggestions should prove helpful:

Don't read the text immediately. As you begin each new chapter, look it over first. Read the introductory paragraphs, find out what topics will be covered, and then turn to the end of the chapter and read the summary. You'll be in a much better position to understand new material if you first have a general idea of where you're heading. Once you've begun a chapter, read it several times. First read the chapter rapidly, making checks or comments in the margin next to important or difficult points; then return for an in-depth study.

Keep up with the material. Who's likely to do a better job—the runner who trains five miles per day for weeks before a race, or the one who suddenly trains twenty miles the day before the race? Organic chemistry is a subject that builds on previous knowledge. You have to keep up with the material on a daily basis.

Work the problems. There are no shortcuts here. Working problems is the only way to learn organic chemistry. The practice problems show you how to approach the material, the in-text problems provide immediate practice, and the end-of-chapter problems provide additional drill and some real challenges. Answers and explanations for all problems are given in the accompanying *Study Guide and Solutions Manual*.

Ask questions. Faculty members and teaching assistants are there to help you. Most of them will turn out to be extremely helpful and genuinely interested in seeing you learn.

Use molecular models. Organic chemistry is a three-dimensional science. Although this book uses many careful drawings to help you visualize

molecules, there's no substitute for building a molecular model, turning it in your hands, and looking at it from different views.

Use the study guide. The *Study Guide and Solutions Manual* that accompanies this text gives complete solutions to all problems and provides a wealth of supplementary material. Included are a list of study goals for each chapter, outlines of each chapter, a large glossary, a summary of name reactions, a summary of methods for preparing functional groups, a summary of the uses of important reagents, and tables of spectroscopic information. Find out ahead of time what's there so that you'll know where to go when you need help.

Good luck. I sincerely hope you enjoy learning organic chemistry and that you come to see the logic and beauty of its structure. I would be glad to receive comments and suggestions from any who have learned from this book.

BRIEF CONTENTS

1 ■	STRUCTURE AND BONDING	1
2 ■	THE NATURE OF ORGANIC COMPOUNDS: ALKANES	32
3 ■	ALKENES: THE NATURE OF ORGANIC REACTIONS	70
4 ■	ALKENES AND ALKYNES	101
5 ■	AROMATIC COMPOUNDS	141
6 ■	STEREOCHEMISTRY	171
7 ■	ALKYL HALIDES	199
8 ■	ALCOHOLS, ETHERS, AND PHENOLS	232
9 ■	ALDEHYDES AND KETONES: NUCLEOPHILIC ADDITION REACTIONS	260
10 ■	CARBOXYLIC ACIDS AND DERIVATIVES	285
11 ■	CARBONYL ALPHA-SUBSTITUTION REACTIONS AND CONDENSATION REACTIONS	325
12 ■	AMINES	350
13 ■	STRUCTURE DETERMINATION	378
14 ■	BIOMOLECULES: CARBOHYDRATES	410
15 ■	BIOMOLECULES: AMINO ACIDS, PEPTIDES, AND PROTEINS	442
16 ■	BIOMOLECULES: LIPIDS AND NUCLEIC ACIDS	473
17 ■	THE ORGANIC CHEMISTRY OF METABOLIC PATHWAYS	507
APPENDIX ■	NOMENCLATURE OF POLYFUNCTIONAL ORGANIC COMPOUNDS	530
	INDEX	11

CONTENTS

Preface	xv
A Note for Students	xix

1 ■ STRUCTURE AND BONDING 1

1.1	Atomic Structure	2
1.2	Electronic Configuration of Atoms	4
1.3	Development of Chemical Bonding Theory	6
1.4	The Nature of Chemical Bonds: Ionic Bonds	6
1.5	The Nature of Chemical Bonds: Covalent Bonds	7
1.6	Formation of Covalent Bonds	10
1.7	Hybridization: The Formation of sp^3 Orbitals	12
1.8	The Structure of Methane	13
1.9	The Structure of Ethane	14
1.10	Hybridization: sp^2 Orbitals and the Structure of Ethylene	15
1.11	Hybridization: sp Orbitals and the Structure of Acetylene	17
1.12	Bond Polarity and Electronegativity	19
1.13	Acids and Bases	21

Interlude—Chemicals, Toxicity, and Risk	26
Summary and Key Words	28
Working Problems	28
Additional Problems	29

2 ■ THE NATURE OF ORGANIC COMPOUNDS: ALKANES 32

2.1	Functional Groups	32
2.2	Alkanes and Alkyl Groups: Isomers	37
2.3	Naming Branched-Chain Alkanes	43
2.4	Properties of Alkanes	46

- 2.5 Conformations of Ethane 47
- 2.6 Drawing Chemical Structures 51
- 2.7 Cycloalkanes 52
- 2.8 Cis-Trans Isomerism in Cycloalkanes 53
- 2.9 Conformations of Some Common Cycloalkanes 55
- 2.10 Axial and Equatorial Bonds in Cyclohexane 58
- 2.11 Conformational Mobility of Cyclohexane 60

Interlude—Petroleum 62
Summary and Key Words 64
Additional Problems 65

3 ■**ALKENES: THE NATURE OF ORGANIC REACTIONS 70**

- 3.1 Naming Alkenes 70
- 3.2 Electronic Structure of Alkenes 73
- 3.3 Cis-Trans Isomers 74
- 3.4 Sequence Rules: The *E,Z* Designation 77
- 3.5 Kinds of Organic Reactions 80
- 3.6 How Reactions Occur: Mechanisms 82
- 3.7 An Example of a Polar Reaction: Addition of HCl to Ethylene 84
- 3.8 The Mechanism of an Organic Reaction: Addition of HCl to Ethylene 86
- 3.9 Describing a Reaction: Rates and Equilibria 87
- 3.10 Describing a Reaction: Reaction Energy Diagrams and Transition States 89
- 3.11 Describing a Reaction: Intermediates 92

Interlude—Carrots, Alkenes, and the Chemistry of Vision 94
Summary and Key Words 96
Additional Problems 97

4 ■**ALKENES AND ALKYNES 101**

- 4.1 Addition of HX to Alkenes 101
- 4.2 Orientation of Alkene Addition Reactions: Markovnikov's Rule 103
- 4.3 Carbocation Structure and Stability 105
- 4.4 Hydration of Alkenes 107
- 4.5 Addition of Halogens to Alkenes 108
- 4.6 Hydrogenation of Alkenes 111
- 4.7 Oxidation of Alkenes 112
- 4.8 Alkene Polymers 114
- 4.9 Preparation of Alkenes: Elimination Reactions 117

- 4.10 Conjugated Dienes 120
- 4.11 Stability of Allylic Carbocations: Resonance 122
- 4.12 Drawing and Interpreting Resonance Forms 124
- 4.13 Alkynes 127
- 4.14 Reactions of Alkynes: Addition of H_2 , HX , and X_2 128
- 4.15 Addition of Water to Alkynes 129
- 4.16 Alkyne Acidity: Formation of Acetylide Anions 131

Interlude—Natural Rubber 132

Summary and Key Words 133

Summary of Reactions 134

Additional Problems 137

5 ■ AROMATIC COMPOUNDS 141

- 5.1 Structure of Benzene: The Kekulé Proposal 141
- 5.2 Stability of Benzene 142
- 5.3 Structure of Benzene: The Resonance Proposal 143
- 5.4 Naming Aromatic Compounds 145
- 5.5 Chemistry of Benzene: Electrophilic Aromatic Substitution 147
- 5.6 Bromination of Benzene 148
- 5.7 Other Electrophilic Aromatic Substitution Reactions 150
- 5.8 The Friedel–Crafts Alkylation and Acylation Reactions 152
- 5.9 Reactivity in Electrophilic Aromatic Substitution 154
- 5.10 Orientation of Reactions on Substituted Aromatic Rings 156
- 5.11 Oxidation and Reduction of Aromatic Compounds 159
- 5.12 Polycyclic Aromatic Hydrocarbons 160
- 5.13 Organic Synthesis 161

Interlude—Polycyclic Aromatic Hydrocarbons and Cancer 164

Summary and Key Words 165

Summary of Reactions 166

Additional Problems 167

6 ■ STEREOCHEMISTRY 171

- 6.1 Stereochemistry and the Tetrahedral Carbon 171
- 6.2 The Reason for Handedness in Molecules: Chirality 174
- 6.3 Optical Activity 177
- 6.4 Specific Rotation 179
- 6.5 Pasteur's Discovery of Enantiomers 180
- 6.6 Sequence Rules for Specification of Configuration 181
- 6.7 Diastereomers 184
- 6.8 Meso Compounds 186
- 6.9 Molecules with More Than Two Stereogenic Centers 188
- 6.10 Racemic Mixtures 189
- 6.11 Physical Properties of Stereoisomers 189

- 6.12** A Brief Review of Isomerism 190
6.13 Stereochemistry of Reactions: Addition of HBr to Alkenes 191
- Interlude—Chirality in Nature 193
Summary and Key Words 194
Additional Problems 195

7 ■ ALKYL HALIDES 199

- 7.1** Naming Alkyl Halides 199
7.2 Preparation of Alkyl Halides: Radical Chlorination of Alkanes 200
7.3 Alkyl Halides from Alcohols 203
7.4 Reactions of Alkyl Halides: Grignard Reagents 205
7.5 Nucleophilic Substitution Reactions: The Discovery 206
7.6 Kinds of Nucleophilic Substitution Reactions 207
7.7 The S_N2 Reaction 209
7.8 The S_N1 Reaction 214
7.9 Eliminations: The E2 Reaction 217
7.10 Eliminations: The E1 Reaction 220
7.11 A Summary of Reactivity: S_N1 , S_N2 , E1, E2 222
7.12 Biological Substitution Reactions 223

Interlude—Alkyl Halides and the Ozone Hole 224
Summary and Key Words 226
Summary of Reactions 226
Additional Problems 228

8 ■ ALCOHOLS, ETHERS, AND PHENOLS 232

- 8.1** Naming Alcohols, Phenols, and Ethers 233
8.2 Properties of Alcohols, Phenols, and Ethers: Hydrogen Bonding 235
8.3 Properties of Alcohols and Phenols: Acidity 237
8.4 Synthesis of Alcohols 239
8.5 Alcohols from Carbonyl Compounds 240
8.6 Ethers from Alcohols: The Williamson Ether Synthesis 242
8.7 Reactions of Alcohols 243
8.8 Synthesis and Reactions of Phenols 245
8.9 Reactions of Ethers: Acidic Cleavage 247
8.10 Cyclic Ethers: Epoxides 248
8.11 Ring-Opening Reactions of Epoxides 249
8.12 Thiols and Sulfides 250

Interlude—Ethanol as Chemical, Drug, and Poison 252
Summary and Key Words 253

Summary of Reactions	254
Additional Problems	256

9 ■**ALDEHYDES AND KETONES: NUCLEOPHILIC ADDITION REACTIONS 260**

9.1	Kinds of Carbonyl Compounds	260
9.2	Structure and Properties of Carbonyl Groups	262
9.3	Naming Aldehydes and Ketones	263
9.4	Synthesis of Aldehydes	265
9.5	Synthesis of Ketones	266
9.6	Oxidation of Aldehydes	267
9.7	Reactions of Aldehydes and Ketones: Nucleophilic Additions	268
9.8	Nucleophilic Addition of Water: Hydration	270
9.9	Nucleophilic Addition of Alcohols: Acetal Formation	272
9.10	Nucleophilic Addition of Amines: Imine Formation	274
9.11	Nucleophilic Addition of Grignard Reagents: Alcohol Formation	275
9.12	Some Biological Nucleophilic Addition Reactions	278

Interlude—Chemical Warfare in Nature	279
Summary and Key Words	280
Summary of Reactions	281
Additional Problems	281

10 ■**CARBOXYLIC ACIDS AND DERIVATIVES 285**

10.1	Naming Carboxylic Acids and Derivatives	285
10.2	Occurrence, Structure, and Properties of Carboxylic Acids	289
10.3	Acidity of Carboxylic Acids	290
10.4	Synthesis of Carboxylic Acids	292
10.5	Nucleophilic Acyl Substitution Reactions	295
10.6	Reactions of Carboxylic Acids	297
10.7	Chemistry of Acid Halides	300
10.8	Chemistry of Acid Anhydrides	303
10.9	Chemistry of Esters	305
10.10	Chemistry of Amides	309
10.11	Chemistry of Nitriles	311
10.12	Nylons and Polyesters: Step-Growth Polymers	314

Interlude—Thiol Esters: Biological Carboxylic Acid Derivatives	316
Summary and Key Words	317
Summary of Reactions	318
Additional Problems	320

11 ■CARBONYL ALPHA-SUBSTITUTION REACTIONS
AND CONDENSATION REACTIONS 325

- 11.1 Keto-Enol Tautomerism 326
- 11.2 Reactivity of Enols: The Mechanism of Alpha-Substitution Reactions 329
- 11.3 Alpha Halogenation of Ketones and Aldehydes 330
- 11.4 Acidity of α -Hydrogen Atoms: Enolate Ion Formation 331
- 11.5 Reactivity of Enolate Ions 335
- 11.6 Alkylation of Enolate Ions 336
- 11.7 Carbonyl Condensation Reactions 338
- 11.8 Condensation of Aldehydes and Ketones: The Aldol Reaction 338
- 11.9 Dehydration of Aldol Products: Synthesis of Enones 340
- 11.10 Condensation of Esters: The Claisen Condensation Reaction 342

Interlude—Biological Carbonyl Condensation Reactions 344
Summary and Key Words 345
Summary of Reactions 345
Additional Problems 346

12 ■

AMINES 350

- 12.1 Naming Amines 351
- 12.2 Structure and Properties of Amines 353
- 12.3 Amine Basicity 354
- 12.4 Resolution of Enantiomers by Use of Amine Salts 357
- 12.5 Synthesis of Amines 359
- 12.6 Reactions of Amines 362
- 12.7 Heterocyclic Amines 366
- 12.8 Naturally Occurring Amines: Morphine Alkaloids 370

Interlude—Organic Dyes and the Chemical Industry 372
Summary and Key Words 373
Summary of Reactions 374
Additional Problems 375

13 ■

STRUCTURE DETERMINATION 378

- 13.1 Infrared Spectroscopy and the Electromagnetic Spectrum 378
- 13.2 Infrared Spectroscopy of Organic Molecules 382
- 13.3 Ultraviolet Spectroscopy 386
- 13.4 Interpreting Ultraviolet Spectra: The Effect of Conjugation 388
- 13.5 Nuclear Magnetic Resonance Spectroscopy 389

- 13.6 The Nature of NMR Absorptions 390
- 13.7 Chemical Shifts 393
- 13.8 Chemical Shifts in ^1H NMR Spectra 394
- 13.9 Integration of ^1H NMR Spectra: Proton Counting 395
- 13.10 Spin-Spin Splitting in ^1H NMR Spectra 396
- 13.11 Uses of ^1H NMR Spectra 400
- 13.12 ^{13}C NMR Spectroscopy 401

Interlude—Magnetic Resonance Imaging (MRI) 403
Summary and Key Words 404
Additional Problems 405

14 ■ BIOMOLECULES: CARBOHYDRATES 410

- 14.1 Classification of Carbohydrates 411
- 14.2 Configurations of Monosaccharides: Fischer Projections 412
- 14.3 D,L Sugars 415
- 14.4 Configurations of Aldoses 417
- 14.5 Cyclic Structures of Monosaccharides: Hemiacetal Formation 419
- 14.6 Monosaccharide Anomers: Mutarotation 421
- 14.7 Conformations of Monosaccharides 423
- 14.8 Reactions of Monosaccharides 424
- 14.9 Disaccharides 429
- 14.10 Polysaccharides 431
- 14.11 Other Important Carbohydrates 434
- 14.12 Cell-Surface Carbohydrates 435

Interlude—Sweetness 436
Summary and Key Words 438
Additional Problems 439

15 ■ BIOMOLECULES: AMINO ACIDS, PEPTIDES, AND PROTEINS 442

- 15.1 Structures of Amino Acids 443
- 15.2 Dipolar Structure of Amino Acids 447
- 15.3 Isoelectric Points 448
- 15.4 Peptides 450
- 15.5 Covalent Bonding in Peptides 452
- 15.6 Peptide Structure Determination: Amino Acid Analysis 453
- 15.7 Peptide Sequencing: The Edman Degradation 454
- 15.8 Peptide Synthesis 457
- 15.9 Classification of Proteins 460
- 15.10 Protein Structure 461
