RECOGNITION
Munich, Germany, Oct. 19-22, 1982**

Conference Chairman's Message

The sixth ICPR in Munich shows the recent development of this exciting new field with respect to methods as well as to applications. It is a pleasure to offer this work to the scientific community. I would like to thank all those who contributed to the organization and to the publication of the two volumes, especially the authors, our publications chairman, and the IEEE Computer Society Press. I hope this work will give information and stimulating support to all those engaged in the field of Pattern Recognition.

Editor's Note

Contributions of more than 500 outstanding experts from 23 countries have made these proceedings an excellent documentation of the current state-of-the-art in Pattern Recognition. It is greatly acknowledged that the authors followed the rules we necessarily had to make in order to complete the proceedings with appropriate size, cost, and timely publication. Unfortunately, some of the accepted papers did not arrive on time and therefore could not be placed in the proceedings in the proper place. However, if they arrived before the printing, they can be found at the end of the second volume.

Special thanks are given to my co-workers, especially to Maria Blakley and to Dr. Hans Unterberger, who actively and untiringly helped me in the extensive preparation of the two volumes.

Finally, I am indebted to Mr. C.G. Stockton of the IEEE Computer Society Press, who not only handled the distribution of the author's kits, but also practised effective and friendly cooperation across the Atlantic.

Manfred Lang
Publications Chairman

Foreword

The International Conferences on Pattern Recognition have become the outstanding international meeting of researchers in the broad field of Pattern Recognition. For the first time the ICPR is located in Germany, and we hope you will agree that Munich is a city which is as pleasant and remarkable as the other excellent conference places all over the world which so far have housed the ICPRs.

Nevertheless, the heart of a conference is the scientific program, and we are sure that a rich and diverse set of high quality papers was selected and will be presented at the conference. We received 337 complete papers from 25 countries and selected 251 papers from 23 countries for presentation and publication. However, the majority of submitted (237) and accepted (186) papers is from only four countries. These numbers do not include posters and invited papers. In addition to the submitted papers, sixteen leading experts were asked to present invited survey papers at the conference. The topics were selected to cover diverse aspects of Pattern Recognition and, if possible, to be somewhat different from surveys presented at preceding ICPRs. A set of 50 posters will be shown, and it is expected that this offers an opportunity to make last minute results known. The four panels organized for the conference focus on topics of immediate interest and should initiate additional scientific discussion. In summary, the papers indicate the importance of all aspects of image processing and the trend to make the available techniques work in practice. Finally, the scientific program is augmented by technical excursions and an industrial exhibition organized by the Industrial Program Chairman. These activities provide excellent opportunities for further information.

Every short paper was sent to two independent reviewers, every long paper to three. In most cases the votes of the reviewers concerning acceptance or rejection were the same, and in these cases such a unanimous vote was considered to be the correct classification. But it also happened that the votes were not unanimous--this was the case for 81 papers, to be precise. The following five criteria were then used to come to a decision: the grading of the papers by the reviewers and their comments, if any; the need for a balanced technical program; the size of the Proceedings; additional or related papers by the same author(s); a (quick) look at the paper by the Program Chairman. The first and the third criterion turned out to be the most important ones. Since the Organizing Committee had decided to limit the size of the Proceedings to 1200 pages, a high threshold for accepting a paper had to be established. This necessarily resulted in the rejection of quite a few papers.

The cooperation of the members of the Program Committee, who also suggested the reviewers, is gratefully acknowledged. Without the competent and fast help of these experts it would have been impossible to evaluate the submitted papers properly. The task of the Program Chairman was, in fact, made manageable to a good extent by their effort. All the members of the Organizing Committee gave every support necessary to prepare the Program, and my coworkers H. Bunke, D. Jäpel, and P. Regel as well as my secretaries Mrs. T. Wille and Mrs. S. Zett spent hours to assist me in all phases until the Program was finished. Thanks to all of you!

May the 6th ICPR continue in the line of successful conferences, which document the international progress and exhibit future trends, and may this be a good basis for the 7th ICPR to be organized by M.D. Levine in Montreal, Canada, in 1984.

Message from the President of IAPR

It gives me great pleasure to extend greetings to the membership of IAPR on the occasion of this Sixth International Conference on Pattern Recognition. It is now over ten years since the original committee was formed that organized the First International Joint Conference on Pattern Recognition, held in Washington, DC in October 1973. The Association officially came into existence in 1978, and now has nearly 20 national member societies. We look forward to its continued growth.

The range of interests of IAPR can best be defined by the technical program of this Conference. The range of membership is indicated by the list of member societies given below; this does not include several new member societies which are expected to be formally elected to IAPR membership at the meeting of the Governing Board to be held at this Conference.

Azriel Rosenfeld
College Park, MD, USA

IAPR Member Societies

Belgium: Pattern Recognition Contract Group of SOCESCI.

Canada: Canadian Image Processing and Pattern Recognition Society.

People's Republic of China: Pattern Recognition and Machine Intelligence Committee of the Chinese Association of Automation.

Denmark: Danish Pattern Recognition Society.

Finland: Pattern Recognition Society of Finland.

France: Group "Pattern Recognition and Artificial Intelligence" of AFCET (Association Francaise pour la Cybernetique Economique et Technique).

Federal Republic of Germany: Deutsche Arbeitsgemeinschaft für Mustererkennung.

India: Indian Unit for Pattern Recognition and Artificial Intelligence (IUPRAI).

Italy: Gruppo di Lavoro per il Pattern Recognition of A.I.C.A. (Italian Association for Automatic Computation).

Japan: Audio-Visual Research Group (AVIRC).

Mexico: Chapter on Pattern Recognition and Image Processing of the Association Mexicana de Ingenieros en Comunicaciones Electricas y Electronica (AMICEE).

The Netherlands: Nederlandse Vereniging voor Patroonherkenning en Beeldverwerking.

Sweden: Svenska Sällskapet för Automatiserad Bildanalys (SSAB).

United Kingdom: British Pattern Recognition Association.

United States of America: IEEE Computer Society.

IAPR Executive Committee

Deutsche Arbeitsgemeinschaft für Mustererkennung—DAGM

The DAGM (German Pattern Recognition Society) is an organisation that promotes the exchange of know-how in the field of pattern recognition. It is supported by the societies DGaO, DGK, DGN, DGON, GI, GMDS, NTG, and the German Section of the IEEE. The DAGM represents these organisations internationally in the field of pattern recognition and is a member of the IAPR. Its president, member organisations, and their representatives are:

President: Prof. H. Marko

Secretary: H. Plutzer

Scientific Advisor: G. Winkler

Member Organisations:

Deutsche Gesellschaft für angewandte Optik (DGaO)

Fa. Leitz

Postfach 2020

Grusswort

Sehr geehrte Damen und Herren,

Es freut mich, dass es der Deutschen Arbeitsgemeinschaft für Mustererkennung gelungen ist, die 6. International Conference on Pattern Recognition nach Deutschland zu holen.

Mustererkennungsanwendungen waren in der Vergangenheit wegen ihres enormen Bedarfs an Rechnerleistung und Speicherkapazität weitgehend an aufwendig ausgestattete Rechenzentren oder Forschungslabors gebunden. Die drastischen Verbesserungen des Preis-Leistungsverhältnisses von Prozessoren und Speicherchips heben diese Barrieren teurer Erstausstattung auf und lassen eine breite Anwendung von Mustererkennungssystemen absehen. Automatische Sprach- und Bildverarbeitung wird Bestandteil fortgeschrittener Produktionssysteme sein, vor allem im Bereich der Prozesssteuerung, der Handhabung und Qualitätskontrolle, später auch im Büro.

Hier gilt es natürlich, noch einige Hemisse auszuräumen. Die Bild- und Sprachverarbeitung, heute noch oftmals als magische Kunst betrachtet, wird von vielen Anwendern noch mit Skepsis betrachtet und muss vor allem um Investitionsgelder mit anderen Automatisierungstechniken konkurrieren, die derzeit eine schnellere Amortisation versprechen.

Trotz dieser Hemisse wird für die Mustererkennung die heute noch zwischen Forschung und Anwendung bestehende Lücke geschlossen. Dazu beitragen wird neben dem technischen Fortschritt, der durch die Bauelemententwicklung und durch die Fortschritte im Bereich der Künstlichen Intelligenz stark bestimmt ist,

- der immer schärfer werdende internationale Wettbewerb, der die Industrie zwingt, alle sich bietenden Möglichkeiten auf Produktivitätssteigerung auszunutzen
- das Interesse der Mikroelektronikindustrie und der DV-Industrie, die neue Märkte durch neue Anwendungen für ihr auf Wachstum angelegtes Geschäft dringend benötigen und nicht zuletzt
- die staatliche Förderung, wie z.B. das amerikanische Programm "Speech Understanding" und "Image Understanding" oder das japanische PIPS-Programm.

Auch das BMFT fördert seit etwa 3 Jahren die Mustererkennung, wenn auch in sehr bescheidenem Umfang.

Ihr Arbeitsgebiet hat eine grosse Zukunft, insofern können Sie ganz optimistisch sein. Nutzen Sie diese Chance dazu aus, die Mustererkennung für gesellschaftlich nutzbringende und sinnvolle Anwendungen zu erschliessen.

In diesem Sinne wünsche ich Ihrer Tagung viel Erfolg.

Andreas von Bülow

Bundesminister für
Forschung und Technologie

Processor (VAP-80)	246
<i>H. Keller, A. Comazzi, and A. Favre</i>	
The Ultrafast Asynchronous Bus—A Basic Component for Efficient Image Processing	250
<i>G.C. Nicolae, M. Böhm, and K.H. Höhne</i>	
Matching the Task to an Image Processing Architecture	254
<i>V. Cantoni and S. Levialdi</i>	
MACSYM: An Event-Driven Parallel Processor for Document Pattern Understanding	258
<i>K. Inagaki, T. Kato, and T. Sakai</i>	
A VLSI Architecture for Pattern Recognition Using Residue Arithmetic	262
<i>S.D. Fouse, G.R. Nudd, and A.D. Cumming</i>	

Session 4.1: Medical Applications (D. Rutovitz and W. Abmayr, Chairmen)	
3-D Reconstruction of Coronary Arterial Segments from Two Projections	270
<i>J.J. Gerbrands, G.J. Troost, J.H.C. Reiber, C.J. Kooijman, and C.H. Slump</i>	
Further Experiments of the Software System AISCR-V3 for Computer Aided Screening of Chest Photofluorograms	273
<i>J.-I. Hasegawa, J.-I. Toriwaki, T. Fukumura, and Y. Takagi</i>	
Detecting the Edges of Lung Tumors by Classification Techniques	276
<i>M. Hashimoto, P.V. Sankar, and J. Sklansky</i>	
Session 4.2: Texture (C.-E. Liedtke and R.M. Haralick, Chairmen)	
Space Filling Curves and Texture Analysis	282
<i>P.T. Nguyen and J. Quinqueton</i>	
A Theory of Texture Measurement Definition	286
<i>R.W. Conners and R.E. Vasquez-Espinosa</i>	
A Structural Analysis of Natural Textures by Fourier Transformation	289
<i>T. Matsuyama, S. Miura, and M. Nagao</i>	
Can a Local Histogram Really Map Texture Information?	293
<i>G.E. Lowitz</i>	
Edge-Based Texture Measures	298
<i>M. Pietikäinen and A. Rosenfeld</i>	
Texture Classification Using Averages of Local Pattern Matches	301
<i>M. Pietikäinen, A. Rosenfeld, and L.S. Davis</i>	
Session 4.3: Dynamic Images (H.-H. Nagel and W. Snyder, Chairmen)	
Representation of Motions in Time-Varying Imagery	306
<i>M. Asada, M. Yachida, and S. Tsuji</i>	
Photometric Stereo Considering Diffuse Illumination	310
<i>H. Westphal</i>	
Electronic Stabilization of Images within Image Sequences	313
<i>G. Hofele, K. Luetjen, and E. Repasi</i>	
Understanding the Dynamic Behaviour of a Moving Cell	316
<i>M.D. Levine, P. Noble, and Y.M. Youssef</i>	
Analysis of Body Motion Image Sequence	320
<i>K. Akita</i>	
Session 4.4: Image Preprocessing (H. Freeman and H. Platzer, Chairmen)	
Restoration of Binary Image from Boundary Information	328
<i>M. Aoki</i>	
Transform Preprocessing of Binary Patterns for Structural Classification	331
<i>Ph.W. Besslich</i>	
Encoding of Binary Images by Raster-Chain-Coding of Cracks	335
<i>P.-E. Danielsson</i>	
An Efficient Block Coding Technique for Data Compression	339
<i>F.W.M. Stentiford</i>	
Algorithms for Region Expansion and Shrinking Based on Chain Codes Transformations	343
<i>J.P. Gambotto and B. Zavidovique</i>	
Session 5.1: Image Understanding (M.D. Levine and B. Neumann, Chairmen)	
An Object-Centered Three-Dimensional Model Builder	348
<i>C. Dane and R. Bajcsy</i>	
Matching of Deformed Images	351
<i>R. Bajcsy and C. Broit</i>	
Image Registration by Matching Relational Structures	354
<i>J.K. Cheng and T.S. Huang</i>	
Pattern Recognition by Hypothesis-Guided Analysis of a Contour Graph Structure	357
<i>E. Mühlenfeld</i>	
Organization of Relational Models	360
<i>L. Shapiro</i>	
Session 5.2: Special Hardware (G.H. Granlund and T. Einsele, Chairmen)	
Special Hardware for Pattern Processing	368
<i>M.J.B. Duff</i>	

A VLSI Structure for Pattern Matching	380
<i>L. Ciminiera, C. Demartini, and A. Serra</i>	
Architecture of a Golay-Logic Image Processor	384
<i>M.D. Graham and G.L. Garcia</i>	
Interleaved Pyramid Architectures for Bottom Up Image Analysis	388
<i>N. Ahuja and S. Swamy</i>	
Session 5.3: Relaxation Methods (A. Rosenfeld and S.W. Zucker, Chairmen)	
Segmentation of Dot Patterns Containing Homogeneous Clusters	392
<i>M. Tuceryan and N. Ahuja</i>	
Recognition of Hand-Printed Kanji Characters by a Relaxation Method	395
<i>K. Yamamoto and A. Rosenfeld</i>	
Definition of a Consistent Labeling as a Global Extremum	399
<i>M. Berthod</i>	
On Compatibility Coefficients of Probability Relaxation Labeling	402
<i>K.-R. Wang and C.-S. Zhuang</i>	
Relaxation Labeling and Evidence Gathering	405
<i>O.D. Faugeras</i>	
Session 5.4: Theoretical Problems (M. Pavel and E.R. Caianiello, Chairmen)	
Topological Properties and Topology-Preserving Transformation of a Three-Dimensional Binary Picture	414
<i>J.-I. Toriwaki, S. Yokoi, T. Yonemura, and T. Fukumura</i>	
Computation of the Delaunay Triangulation of a Convex Polygon under a Minimum Space Complexity Constraint	420
<i>P.A. Devijver and S. Maybank</i>	
Estimation of Fuzzy Membership Functions	423
<i>S.K. Parui and D.D. Majumder</i>	
Two-Dimensional, Fast Translation Invariant Transforms with Improved Mapping Properties	427
<i>X. Müller and H. Burkhardt</i>	
A Recursive Algorithm for Pattern Recognition	431
<i>V.V. Alexandrov, A.I. Alexeev, and N.D. Gorsky</i>	
Session 6.1: Image Segmentation (G. Nagy and E. Mühlenfeld, Chairmen)	
An Automated Visual Inspection System for On-Line Quality Control	436
<i>J. Grossmann</i>	
Automatic Position Detection of Discrete Semiconductors and of Integrated and Hybrid Circuits in Wire Bonding Using a Pattern-Independent Process	440
<i>G. Doemens and M. Brodt</i>	
A Pattern Matching System for Inspecting Keyboards	444
<i>J. Wilder</i>	
Stamped Character Inspection Apparatus Based on the Bit Matrix Method	448
<i>Y. Hongo and A. Komuro</i>	
Automatic X-Ray Testing of Castings: An Approach Based on a Local Feature Operator and Flexible Image Matching	451
<i>H. Strecker</i>	
Session 6.2: Shape (E. Persoon and H. Strecker, Chairmen)	
Finding Local Boundary Characteristics by Wave Extraction	458
<i>G.W. Zack</i>	
An Algorithm for Subpattern Matching of Line Patterns	461
<i>F. Kimura, M. Yoshimura, and Y. Miyake</i>	
A Parallel Mesh Moment Computer	465
<i>A.P. Reeves</i>	
Regularization of Piece-Wise Linear Digitized Plane Curves for Shape Analysis and Smooth Reconstruction	468
<i>T. Kasvand and N. Otsu</i>	
A Geometrical Approach to Polygonal Dissimilarity and Shape Matching	472
<i>R.L. Kashyap and B.J. Oommen</i>	

Session 6.3: General Applications (A. Schief and E. Bunge, Chairmen)	
A Bilevel Rendition Method of Document Images Including Continuous Tone Pictures	482
<i>H. Making</i>	
DOCUMENTANALYSIS the Textscanner: A Model for Analyzing and Classifying	
Document Elements	486
<i>G. Neugebauer</i>	
Halftone Recognition by an Experimental Text and Facsimile Workstation	489
<i>W. Postl</i>	
Field Segmentation and Classification in Document Image	492
<i>S. Ito and S. Sakatani</i>	
Document Analysis System	496
<i>K. Y. Wong, R.G. Casey, and F.M. Wahl</i>	
Session 7.1: Remote Sensing (J. Bodechtel and E. Triendl, Chairmen)	
Spatial Reasoning to Determine Stream Network from Landsat Imagery	502
<i>R. M. Haralick, S. Wang, and D.B. Elliott</i>	
Matching of a Map with an Aerial Image	517
<i>G.G. Medioni</i>	
A Method for Determination of Cloud Properties from Two-Dimensional Histograms	520
<i>C. Simmer, E. Raschke, and E. Ruprecht</i>	
Monitoring and Change Detection with Landsat Imagery	523
<i>M. Goldberg, D. Schlaps, M. Alvo, and G. Karam</i>	
Session 7.2: Image Preprocessing (E. Riseman and R. Wilson, Chairmen)	
Discrete Size-Scale Changes in Hexagonally Digitized Images	528
<i>J.-P. Crettez</i>	
Critical Points on a Perfectly 8- or 6-Connected Thin Binary Line	531
<i>S.H.Y. Hung and T. Kasvand</i>	
Quantitative Functional Characterization of an Image Digitization System	535
<i>L.P. Cordella and G. Nagy</i>	
The Wigner Distribution and Its Usefulness for 2-D Image Processing	538
<i>L. Jacobson and H. Wechsler</i>	
On the Selection of Critical Points and Local Curvature Extrema of Region Boundaries for	
Interframe Matching	542
<i>L.S. Dreschler and H.-H. Nagel</i>	
Segmentation of Unconstrained Handwritten Numeric Postal Zip Codes	545
<i>A. Pervez and C.Y. Suen</i>	
Session 7.3: Feature Extraction (J. Kittler and I. Oosterlinck, Chairmen)	
New Methods for Stochastic Approximation of Truncated Karhunen-Loëve Expansions	550
<i>J. Karhunen and E. Oja</i>	
Evaluation of Multispectral Images by Feature Combination	554
<i>R. Schaerf and E. Mauer</i>	
Optimal Linear and Nonlinear Solutions for Least-Square Discriminant Feature Extraction	557
<i>N. Otsu</i>	
Opponent Colors as a 2-Dimensional Feature within a Model of the First Stages of the	
Human Visual System	561
<i>K. Holla</i>	
The Formalism of Correspondence Analysis as a Means to Describe Object Samples	564
<i>E.S. Gelserma, C. Queiros, and T. Timmers</i>	
Session 8.1: Speech Processing (E. Paulus and N.G. Zagoruyko, Chairmen)	
Speech Recognition and Understanding	570
<i>J.-P. Haton</i>	
Discrete Utterance Speech Recognition without Time Normalization—Recent Results	582
<i>J.E. Shore and D. Burton</i>	
Integral Single Level Dynamic Time Warping Algorithm for Connected Word Recognition	585
<i>A. Sugimoto and M. Fukushima</i>	
Lexical Access and Phonologic Processing in ARIAL II	589
<i>G. Perennou</i>
