# PREFACE

Today, the techniques of management science are known to business leaders, urban planners, farmers, military strategists, space scientists, and public administrators in a host of fields. Words such as *systems*, *models*, *optimization*, *simulation*, and *cost-benefit* are now common in the public vocabulary. The need is thus great for an introductory text that explains, with a minimum of mathematics, how to *formulate* decision problems, how to *solve* them using management science concepts, and how to *apply* the solutions obtained.

## THE FIFTH EDITION

This fifth edition provides the first step in a modernization of the teaching of management science. We all are aware of recent developments in information technology that are having a major impact on how management science is being practiced. Some interesting papers have been published during the last two years discussing these developments and suggesting changes in the manner in which management science is being taught. In the previous editions of our book we started to incorporate some of these suggestions. In this edition we are incorporating much more. Yet, we are preserving the basic philosophy that a management science book must cover all the tools of the trade (similarly, a statistics text must cover all the tools of statistics). What we have changed is the *approach* and the *emphasis*.

The following are some of the unique features of this edition.

1. We believe that management science is strongly related to managerial decision making. Therefore, a detailed understanding of the decision making process is provided (Chapter 2).
2. Similarly, we believe that the *process* of *modeling* needs to be emphasized (e.g., see Marks and McLure [6]). This is done in Chapter 2 and throughout the text.
3. Our text emphasizes *problem formulation*, *applications*, and *understanding of what practitioners do*, as suggested by a special task force of the Institute of Management Sciences (see Borsting et al. [2]).

4. We recognize that Management Science, Decision Support Systems and Artificial Intelligence/Expert Systems are all interrelated (Adams and Song [1], Geoffrion [2], Fordyce et al. [3]). This philosophy is presented in Section 1.2 and in the special chapters on Decision Support Systems (Chapter 18) and Expert Systems (Chapter 19).
5. We recognize the end-user computing movement and the possibility that managers are starting to build their own MS/OR models. This could change the notion that an introductory course should be aimed at management science consumers (Borsting et al. [2]) to the philosophy that the course should also be aimed at management science *producers*, or “self-starters,” as suggested by Lee et al. [5]. Chapters 18 and 20 address this issue.
6. Software support is essential for any management science course. Unique support is provided by this text (see instructional support).
7. A “problem first” approach, as suggested by Samson [7], is incorporated in two ways. First, we present several problems at the end of Chapter 2 for the purpose of illustrating many aspects of modeling. These problems range from simple to complex. Some of them require a *sequence* of several models, some require the use of statistics, and some require the application of a DSS. In addition, we start each “tool” chapter with an illustrative problem.
8. Relevance to the real world (as suggested by Borsting et al. [2]) is illustrated by examples of many real world applications (throughout the text).
9. The use of heuristics is becoming important both as a computational tool for complex numerical problems and as a search mechanism in expert systems. This neglected topic (per Tingley [8]) is presented in a separate, new chapter (Chapter 17).
10. Implementation of MS/OR models is treated, as in the previous editions, with respect. Namely, we devote a special chapter (Chapter 20) to the topic and review of much of the relevant research.
11. We recognize the importance of globalization and internationalization. We added more cases and problems with international aspects in this edition.
12. We preserved most of the content of the fourth edition, including all the cases (we added more).

The book is organized in three parts: Foundations, The Tools, and Applications.

In Part I of the book, the foundations of the field are outlined. The reader is introduced to the topic of management science in Chapter 1. Its characteristics and processes are then outlined in Chapter 2, which focuses on the relation of management science to decision making.

Part II, The Tools, is concerned with formulating managerial problems

from many different fields and finding solutions to them using management science models. The chapters are intentionally written to be independent of each other so the instructor may cover only the topics desired for the course. Chapters in this part of the book are typically divided into two segments: “Basics” and “Extensions.” The book was written with the express aim of allowing coverage in a course ranging from one quarter (if only the “Basics” are covered) to two quarters (if the entire text is to be covered). The essence of each topic is presented in the former at a minimal level of mathematical sophistication—typically, only algebra or elementary statistics is needed. The segments in the “Extensions” elaborate on some of the basic models at a somewhat higher level of sophistication. These segments are typically also independent of each other and may thus be selected at will by the instructor for further class study. The mathematical and statistical background needed for the book, as well as a few additional topics (such as “present value”), are included in Appendix A, Mathematics, and in Appendix B, Statistics. Appendix C includes requisite tables for the text and, lastly, the *answers* (not solutions) to most of the even-numbered problems are given in Appendix D.

Each chapter in Part II typically begins with a brief episode showing the student how a particular decision problem arises. When possible, this example is carried throughout the chapter to illustrate the concepts being developed. We have attempted to present a variety of decision situations from a number of fields to emphasize the flexibility of the management science approach. Chapter 7 in particular presents a wide array of applications of linear programming, thus departing from the standard format of the chapters in Part II. In lieu of presenting the mathematical theorems and proofs that form the basis of many of the models, we appeal to intuitive reasoning and logic. These chapters each include a case to help the student apply the tools and techniques learned in the chapter to a realistic situation. The chapters then conclude with a glossary of chapter terms.

The sequence of the chapters progresses from general decision models (Chapter 3 and 4) through forecasting (Chapter 5), mathematical programming (Chapters 6–10), networks (Chapter 11), dynamic programming (Chapter 12), Markov analysis (Chapter 13), inventory models (Chapter 14), and the stochastic models of queuing (Chapter 15) and simulation (Chapter 16). Finally, heuristic programming is presented as a viable approach to decision making (Chapter 17). Each chapter is as independent of the others as possible to provide the instructor with the flexibility of using selected chapters at will.

Part III, Applications, begins with an examination of the new tools of decision support systems (Chapter 18) and expert systems (Chapter 19). From there, the difficulty and process of implementation is addressed in Chapter 20. A detailed case study and answers to the complex cases of Chapter 2 are given in Chapter 21 to illustrate how to integrate the MS tools and techniques in a more realistic framework than the problems of

Part II alone allow. The book concludes with an assessment of the future directions and areas of the application of management science in Chapter 22.

## INSTRUCTIONAL SUPPORT

This edition is supported by:

1. *Instructor's Manual*. This manual includes solutions to all the problems and cases. In addition, you will find extensive suggestions for organizing the course and many transparency masters.
2. *Test Bank*. The test bank is divided into two parts: conceptual questions and problems. Multiple choice format is used in both cases and problems. The test bank is available both in hard cover and on a disk (with Computest).
3. *Software support*. This edition is supported by the following software:
  - a. Lotus spreadsheet templates (by Scott Shafer) for most of the models in this book.
  - b. Preprogrammed management science software (DSS, by Vahid Lotfi and Carl Pegels or MSS, by Norman Nelson) for most of the models in this book.
  - c. IFPS/PC, student version, from Execucom Systems Corporation which will be provided free for all adopters of the book.

## ACKNOWLEDGMENTS

The number of persons to whom we owe thanks for their contributions to the development of this book defies enumeration. Of particular help in this edition were the suggestions and advice offered to us by Timothy Riggle of Baldwin-Wallace College, Peter Zanetich of the Franciscan University of Steubenville, Richard McClure of Miami University, Thomas Schuppe of the Air Force Institute of Technology, James Bartos of the Ohio State University, and Clive Sanford of University of Maine.

We would also like to thank the reviewers of previous editions: James A. Bartos, Ohio State University; F. Douglas Holcombe, Marshall University; Michael Middleton, University of San Francisco; Thomas Tucker, University of Houston at Clear Lake; Ross E. Lanser, San Jose State University; John Anderson, University of Minnesota; A. J. Waltz, University of South Florida; Peter M. Ellis, Utah State University; Richard Ehrhardt, University of North Carolina, Greensboro; Fatollah Salimian, Salisbury State College, Pennsylvania; and Samuel Wagner, Franklin and Marshall College. Special acknowledgment is made of the ideas and constructive suggestions of Carol Meredith in this and previous editions.

Software support is an extremely important feature in this text. Several people deserve acknowledgment. First, we thank Scott Shafer who prepared

the Lotus Templates, Vahid Lotfi and Carl Pegels who authored the Decision Support Systems software, and David G. Clark, Pat Wyman, Swapan Sarkar, Donna Carter and Ellen R. Rose, from Execucom Systems Corporation. Also we thank Execucom Systems Corporation for cooperating with us by providing the IFPS support for this book. A special contribution was made by Paul Gray, Claremont Graduate School, who authored most of the material about IFPS.

Also, we acknowledge the assistance provided by the following students from Eastern Illinois University: John Bock III, Paramjit Sidhu and Terry Reidy. Special thanks go to Sharon Turban who helped in proofing the entire manuscript. Finally, we greatly acknowledge the extensive contribution of Judy Lang who helped us in every phase of the process of producing this fine edition.

Efraim Turban  
Jack Meredith

# CONTENTS

## **PART I FOUNDATIONS 1**

### **Chapter 1 Introduction 2**

- 1.1 What's It All About? 4
- 1.2 Managerial Decision Making 6
- 1.3 Definitions of Management Science (MS) 6
- 1.4 The Characteristics of Management Science 10
- 1.5 The Tools of Management Science 10
- 1.6 Cutler-Hammer's Patent Decision 11
- 1.7 Historical Development 12
- 1.8 Extent of Use and Limitations 13
- 1.9 Plan of the Book 16
- 1.10 Review Questions 18
- 1.11 Glossary 18
- 1.12 References and Bibliography 18
- 1.13 Appendix: Using the Computer 19

### **Chapter 2 Management Science: Characteristics, Modeling, and Cases 22**

- 2.1 Introduction 24
- 2.2 Decision Making: A Primary Focus 24
- 2.3 The Scientific Approach 25
- 2.4 The Systems Point of View 26
- 2.5 An Interdisciplinary Approach 30
- 2.6 Models 30
- 2.7 Use of Computers 32

- 2.8 Step 1: Definition of the Problem 33
- 2.9 Step 2: Classification of the Problem 34
- 2.10 Step 3: Modeling (Formulation) 34
- 2.11 Step 4: Solving the Model 38
- 2.12 Step 5: Model Validation and Sensitivity Analysis 46
- 2.13 Step 6: Interpretation and Implementation 48
- 2.14 Managerial Problems and the Tools of Management Science 48
- 2.15 Decisions under Certainty, Uncertainty, and Risk 53
- 2.16 Group Decision Making 55
- 2.17 Concluding Remarks 55
- 2.18 Some Challenging Management Problems 56
- 2.19 Problems and Exercises 61
- 2.20 Review Questions 61
- 2.21 Glossary 62
- 2.22 References and Bibliography 63

## **PART II THE TOOLS 65**

### **Chapter 3 Decision Theory 66**

#### **Part A: Basics 68**

- 3.1 Decision Analysis with Decision Tables 69
- 3.2 Decisions under Certainty 72
- 3.3 Decisions under Risk 74

- 3.4 Decision Trees 81
- 3.5 Computer Programs for Decision Tables and Trees 89
- 3.6 Concluding Remarks 91
- 3.7 Problems for Part A 93

#### **Part B: Extensions 99**

- 3.8 The Acquisition of Additional Information 99
- 3.9 The Value of Perfect Information 101
- 3.10 The Value of Imperfect Information 104
- 3.11 Decisions under Uncertainty 110
- 3.12 Use of Computers 115
- 3.13 Appendix: Calculating Revised Probabilities 118
- 3.14 Problems for Part B 123
- 3.15 Case I: The Condominium 127  
Case II: Maintaining the Water Valves 127  
Case III: The Air Force Contract 128
- 3.16 Glossary 129
- 3.17 References and Bibliography 130

### **Chapter 4 Utility and Game Theories 132**

#### **Part A: Basics 134**

- 4.1 Utility and Decision Theory 134
- 4.2 Multiple Criteria Decision Making (MCDM) 144
- 4.3 Concluding Remarks 151
- 4.4 Problems for Part A 154

#### **Part B: Extensions 157**

- 4.5 Game Theory 157
- 4.6 Concluding Remarks 169
- 4.7 Problems for Part B 170
- 4.8 Case: The Videotape Strategy 173
- 4.9 Glossary 174
- 4.10 References and Bibliography 174

### **Chapter 5 Forecasting 176**

#### **Part A: Basics 178**

- 5.1 The Forecasting Situation 178
- 5.2 Judgmental Forecasting Methods 183
- 5.3 Counting Methods 184
- 5.4 Moving Averages and Exponential Smoothing 185
- 5.5 Forecasting Errors 189
- 5.6 Other Time-Series Methods 193
- 5.7 Casual Methods 193
- 5.8 Problems for Part A 197

#### **Part B: Extensions 199**

- 5.9 Decomposition 199
- 5.10 Computerization 216
- 5.11 Concluding Remarks 216
- 5.12 Problems for Part B 217
- 5.13 Case: Bardstown Box Company 219
- 5.14 Glossary 220
- 5.15 References and Bibliography 220

### **A Preview: Chapters 6–10 222**

### **Chapter 6 Linear Programming: Foundations 224**

#### **Part A: Basics 226**

- 6.1 The Nature of Linear Programming (LP) Problems 226
- 6.2 Formulation 227
- 6.3 General Formulation and Terminology 232
- 6.4 The Graphical Method of Solution 236
- 6.5 Utilization of the Resources—Slack and Surplus Variables 250
- 6.6 Concluding Remarks 253
- 6.7 Problems for Part A 253

#### **Part B: Extensions 256**

- 6.8 The Simplex Method 256
- 6.9 Computerization 271

- 6.10 Special Situations in the Simplex Method 272
- 6.11 Problems for Part B 280
- 6.12 Case: The Daphne Jewelry Company 282
- 6.13 Glossary 283
- 6.14 References and Bibliography 284

## Chapter 7

### Linear Programming: Applications 286

- 7.1 Crude Oil Refining 288
- 7.2 Paper Trimming 289
- 7.3 Agriculture 290
- 7.4 Finance (Banking) 293
- 7.5 Paper Manufacturing 294
- 7.6 Marketing 295
- 7.7 Auditing 297
- 7.8 Hospital Scheduling 299
- 7.9 Multiperiod Production Scheduling 300
- 7.10 Solution of Game Theory Problems 302
- 7.11 Concluding Remarks 307
- 7.12 Problems 307
- 7.13 References and Bibliography 311

## Chapter 8

### Topics in Mathematical Programming 312

#### Part A: Basics 314

- 8.1 Duality 314
- 8.2 Sensitivity (Postoptimality) Analysis 324
- 8.3 Computerization 334
- 8.4 Problems for Part A 339

#### Part B: Extensions 344

- 8.5 Integer Programming 344
- 8.6 The Zero-One Model 349
- 8.7 The Branch and Bound Method 352
- 8.8 Nonlinear Programming 359
- 8.9 Computer Programs 361
- 8.10 Concluding Remarks 362

- 8.11 Problems for Part B 362
- 8.12 Case: Hensley Valve Corp. 365
- 8.13 Glossary 366
- 8.14 References and Bibliography 366

## Chapter 9

### Goal Programming 368

#### Part A: Basics 370

- 9.1 Introduction 371
- 9.2 The Basic Idea of Goal Programming 372
- 9.3 Concepts for Goal Programming 372
- 9.4 The Structure of Goal Programming 374
- 9.5 Formulation: The Birch Paper Co. 379
- 9.6 Computerized Solution to the BIP Case 381
- 9.7 Sensitivity Analysis 382
- 9.8 Examples of Applications 384
- 9.9 Problems for Part A 390

#### Part B: Extensions 392

- 9.10 Graphical Solution 392
- 9.11 Special Situations 394
- 9.12 Setting Up Goals 394
- 9.13 Concluding Remarks 395
- 9.14 Problems for Part B 396
- 9.15 Case: Cartoy International 397
- 9.16 Glossary 398
- 9.17 References and Bibliography 398

## Chapter 10

### Distribution Models 400

#### Part A: Basics 402

- 10.1 The Transportation Problem—Characteristics and Assumptions 402
- 10.2 The Transportation Method 403
- 10.3 Applications 420
- 10.4 The Assignment Problem 424

- 10.5 Concluding Remarks 434
- 10.6 Problems for Part A 434
- Part B: Extensions 440**
- 10.7 The Modified Distribution Procedure (MODI) 440
- 10.8 Degeneracy 445
- 10.9 The Transshipment Problem 449
- 10.10 Use of Computers 452
- 10.11 Problems for Part B 453
- 10.12 Case I: Northeastern Blood Bank 455  
Case II: Greenhill's Federal Grant 456
- 10.13 Glossary 456
- 10.14 References and Bibliography 457

## Chapter 11 Network Models 458

### Part A: Basics 460

- 11.1 Introduction to PERT and CPM 460
- 11.2 Formulation: The Basic Inputs to PERT/CPM 461
- 11.3 Solving PERT and CPM 466
- 11.4 Event Analysis (Step 5) 471
- 11.5 Activity Analysis (Step 6) 476
- 11.6 Analysis and Application 482
- 11.7 Problems for Part A 483

### Part B: Extensions 491

- 11.8 Estimate of Activity Time in PERT 491
- 11.9 Finding the Probabilities of Completion in PERT (Risk Analysis) 492
- 11.10 The Critical Path Method (CPM): Cost-Time Relationships 496
- 11.11 Other Network Methods 505
- 11.12 Minimal Spanning Tree 507
- 11.13 Shortest Route (Path) 509
- 11.14 Maximum Flow 513
- 11.15 Computerization 515
- 11.16 Concluding Remarks 520
- 11.17 Problems for Part B 525

- 11.18 Case I: The Sharon Construction Corporation 528  
Case II: Dapshar Corporation Goes Multinational 530
- 11.19 Glossary 531
- 11.20 References and Bibliography 532

## Chapter 12 Dynamic Programming 534

### Part A: Basics 536

- 12.1 The Nature of Dynamic Programming (DP) 537
- 12.2 The Stagecoach Problem 538
- 12.3 Terminology and Structure 542
- 12.4 Allocation Processes 546
- 12.5 Concluding Remarks 552
- 12.6 Problems for Part A 552

### Part B: Extensions 555

- 12.7 Probabilistic Problems 555
- 12.8 Mathematical Presentation and Optimization Techniques 557
- 12.9 The Knapsack Problem 559
- 12.10 Computerization 564
- 12.11 Problems for Part B 564
- 12.12 Case: The Personnel Director 565
- 12.13 Glossary 565
- 12.14 References and Bibliography 566

## Chapter 13 Markov Analysis 568

### Part A: Basics 570

- 13.1 Markov Systems 571
- 13.2 Input Data: Transition Probabilities and Initial Conditions 575
- 13.3 State Probabilities 576
- 13.4 Steady State (Equilibrium) 584
- 13.5 Managerial Applications 589

13.6 Concluding Remarks 592

13.7 Problems for Part A 592

**Part B: Extensions 597**

13.8 Absorbing States 597

13.9 Managerial Application 600

13.10 Use of Computers 601

13.11 Problems for Part B 605

13.12 Case: Springfield General  
Hospital 607

13.13 Glossary 607

13.14 References and Bibliography 608

**Chapter 14  
Inventory Models 610**

**Part A: Basics 612**

14.1 Inventory Systems 612

14.2 The Structure of the Inventory  
System 615

14.3 Inventory Costs 619

14.4 The Economic Order Quantity Model  
(EOQ) 621

14.5 Application of the EOQ Model 629

14.6 Discussion of the EOQ  
Assumptions 632

14.7 Inventory Systems 634

14.8 Concluding Remarks 638

14.9 Problems for Part A 638

**Part B: Extensions 641**

14.10 Quantity Discounts 641

14.11 Production Runs: Economic Lot Size  
(ELS) 646

14.12 Single-Period Inventories 651

14.13 Material Requirements Planning  
(MRP) 654

14.14 Planned Shortages 661

14.15 Safety Stocks and Service  
Levels 663

14.16 Use of Computers 671

14.17 Concluding Remarks 673

14.18 Problems for Part B 673

14.19 Case I: Visutech 677

Case II: EMCO Corporation 678

14.20 Glossary 680

14.21 References and Bibliography 681

**Chapter 15  
Waiting Lines 684**

**Part A: Basics 686**

15.1 The Queuing Situation 686

15.2 The Managerial Problem 688

15.3 The Methodology of Queuing  
Analysis 692

15.4 The Arrival Process 694

15.5 The Service Process 696

15.6 The Waiting Line 698

15.7 Queuing Models and Solution  
Approaches 700

15.8 The Basic Poisson-Exponential  
Model 703

15.9 Cost Analysis of Queuing Models 706

15.10 Managerial Applications of Poisson-  
Exponential Queuing Systems 707

15.11 Concluding Remarks 711

15.12 Problems for Part A 713

**Part B: Extensions 717**

15.13 Multifacility Queuing Systems 717

15.14 Other Queuing Situations 723

15.15 Serial Queues 725

15.16 Use of Computers 726

15.17 Problems for Part B 729

15.18 Case I: Newtown Maintenance  
Division 732

Case II: A Queuing Case Study of Drive-  
In Banking 733

15.19 Glossary 737

15.20 References and Bibliography 737

## **Chapter 16** **Simulation    738**

### **Part A: Basics    740**

- 16.1**    The General Nature of Simulation    740
- 16.2**    The Methodology of Simulation    744
- 16.3**    Types of Simulation    746
- 16.4**    The Monte Carlo Methodology    747
- 16.5**    Time Independent, Discrete Simulation    752
- 16.6**    Time Dependent, Discrete Simulation    760
- 16.7**    Risk Analysis    763
- 16.8**    The Role of Computers in Simulation    765
- 16.9**    Issues in Simulation    766
- 16.10**   Problems for Part A    769

### **Part B: Extensions    773**

- 16.11**   Complex Queuing Situations    773
- 16.12**   Simulation with Continuous Probability Distributions    778
- 16.13**   Visual Interactive Simulation    781
- 16.14**   Business Games    785
- 16.15**   Corporate and Financial Planning Models    787
- 16.16**   System Dynamics    792
- 16.17**   Other Simulation Models    793
- 16.18**   Concluding Remarks    795
- 16.19**   Problems for Part B    796
- 16.20**   Case: Express A. G.    801
- 16.21**   Glossary    802
- 16.22**   References and Bibliography    803

## **Chapter 17** **Heuristic Problem Solving    804**

### **Part A: Basics    806**

- 17.1**    Definitions, Discussion, and Examples    807
- 17.2**    The Benefits and Appropriateness of Heuristics    808

- 17.3**    Disadvantages and Limitations    810
- 17.4**    Classification of Heuristics    811
- 17.5**    Measuring the Quality of Heuristics    813
- 17.6**    How to Select the Proper Heuristic    814

### **Part B: Extensions    816**

- 17.7**    Sequencing of Jobs through One Machine    816
- 17.8**    The Traveling Salesperson Problem (TSP)    818
- 17.9**    Illustrative Application    821
- 17.10**   Heuristics and Expert Systems    822
- 17.11**   Concluding Remarks    823
- 17.12**   Problems    824
- 17.13**   Glossary    825
- 17.14**   References and Bibliography    826

## **PART III** **APPLICATIONS    827**

### **A Preview: Chapters 18–19    829**

## **Chapter 18** **Decision Support Systems    830**

- 18.1**    Introduction and Definitions    833
- 18.2**    DSS Characteristics and Benefits    833
- 18.3**    The Evolution of Decision Support Systems    835
- 18.4**    The Structure of Decision Support Systems    835
- 18.5**    The Capabilities of DSS    841
- 18.6**    Construction Considerations    842
- 18.7**    A Group Decision Support System (GDSS)    845
- 18.8**    Examples of Applications    846
- 18.9**    Concluding Remarks    850
- 18.10**   Review Questions    850
- 18.11**   Glossary    850
- 18.12**   References and Bibliography    851
- 18.15**   Appendix: IFPS    852

**Chapter 19**  
**Expert Systems 864**

- 19.1 Introduction and Basic Concepts 867
- 19.2 The Structure of Expert Systems 870
- 19.3 How an Expert System Works 873
- 19.4 Benefits of Expert Systems 874
- 19.5 Limitations of Expert Systems 875
- 19.6 Expert Systems and Management Science 876
- 19.7 Expert Systems Applications 880
- 19.8 Concluding Remarks 883
- 19.9 Review Questions 884
- 19.10 Glossary 884
- 19.11 References and Bibliography 885

**Chapter 20**  
**Implementation 886**

- 20.1 What Is Implementation? 888
- 20.2 Project Viability 891
- 20.3 Other Project Particulars 892
- 20.4 Organizational Factors 894
- 20.5 Operational Factors 896
- 20.6 Behavioral Factors 898
- 20.7 Implementation Failure: A Case Study 905
- 20.8 Concluding Remarks 906
- 20.9 Review Questions 906
- 20.10 Case: Sunrise Electronics 907
- 20.11 Glossary 908
- 20.12 References and Bibliography 908

**Chapter 21**  
**Integrated Complex Cases 912**

- 21.1 The Trader's Problem 914
- 21.2 The Traveling Salesperson Problem 914
- 21.3 Execugraphics, Inc. 915
- 21.4 The Telephone Company 921
- 21.5 Illinois Parts for Farming, Inc. 923
- 21.6 Brunswick Corporation 924
- 21.7 Review Questions for the Brunswick Case 943
- 21.8 Frazee Paint, Inc. 943
- 21.9 Problems 947
- 21.10 References and Bibliography 949

**Chapter 22**  
**The Future of Management Science 950**

- 22.1 Developmental Stages 952
- 22.2 The Past: Requirements for Growth 953
- 22.3 The Present: Extensions of MS 954
- 22.4 The Future: Effectiveness and Computerized Management Support Systems 955
- 22.5 New Computational Technologies 957
- 22.6 Research Opportunities 960
- 22.7 Concluding Remarks 961
- 22.8 References and Bibliography 962

**Appendices 965**

**Index 1005**

# PART I

---

# FOUNDATIONS

In Part I of the text, our aim is to provide a foundation on which to develop the topics in the rest of the book. We do this in two stages.

- Chapter 1 introduces the topic of management science and its wide applicability to decision making. The chapter concludes with an overview of the plan of the text.
- Chapter 2 is directed toward the management science process itself. The use of models to solve managerial problems is the essence of this approach and thus the focus of the chapter. The chapter then relates the management science tools to prototypal managerial problems and discusses their applicability. Finally, we present several challenging managerial problems that introduce many interesting points.

# INTRODUCTION

- 1.1 What's it all about?
- 1.2 Managerial decision making.
- 1.3 Definitions of management science (MS).
- 1.4 The characteristics of management science.
- 1.5 The tools of management science.
- 1.6 Cutler-Hammer's patent decision.
- 1.7 Historical development.
- 1.8 Extent of use and limitations.
- 1.9 Plan of the book.
- 1.10 Review questions.
- 1.11 Glossary.
- 1.12 References and bibliography.
- 1.13 Appendix: Using the computer.
