Foreword

This book presents recent advances in joining technologies for the 1990s—welding, brazing, soldering, mechanical fastening, explosive welding, solid-state bonding, and adhesive bonding—based on the proceedings of a recent conference held at Langley Research Center. A major consideration in the fabrication of any commercial, military, or space products is attachment systems which are safe and reliable. The subject matter covered includes technology developed in current research programs relevant to welding, bonding, and fastening of structural materials, for fabricating structures and mechanical systems used in the aerospace, automotive, and related industries.

Specific topics include equipment, hardware and materials used when welding, brazing, and soldering; mechanical fastening; explosive welding; use of unique selected joining techniques; adhesive bonding; and nondestructive evaluation. A concept of "The Factory of the Future" is presented, followed by advanced welding techniques, automated equipment for welding, welding in a cryogenic atmosphere, blind fastening, stress corrosion resistant fasteners, fastening equipment, explosive welding of different configurations and materials, solid-state bonding, electron beam welding, new adhesives, effects of cryogenics on adhesives, and new techniques and equipment for adhesive bonding.

This book presents a substantial amount of technical data pertinent to innovative techniques for joining advanced materials and structures.

The information in the book is from *Welding, Bonding, and Fastening* edited by John D. Buckley and Bland A. Stein, NASA Langley Research Center, September 1985. This is the proceedings of a symposium sponsored by the National Aeronautics and Space Administration, the American Society for Metals, the George Washington University, the American Welding Society, and the Society of Manufacturing Engineers, held at NASA's Langley Research Center, Hampton, Virginia, October 1984.

The table of contents is organized in such a way as to serve as a subject index and provides easy access to the information contained in the book.

Advanced composition and production methods developed by Noyes Data Corporation are employed to bring this durably bound book to you in a minimum of time. Special techniques are used to close the gap between "manuscript" and "completed book." In order to keep the price of the book to a reasonable level, it has been partially reproduced by photo-offset directly from the original report and the cost saving passed on to the reader. Due to this method of publishing, certain portions of the book may be less legible than desired.

NOTICE

The materials in this book were prepared as accounts of work sponsored by the National Aeronautics and Space Administration, the American Society for Metals, the George Washington University, the American Welding Society, and the Society of Manufacturing Engineers. Publication does not signify that the contents necessarily reflect the views and policies of the contracting organizations or the publisher, nor does mention of trade names or commercial products constitute endorsement or recommendation for use. To the best of our knowledge the information contained in this publication is accurate; however, the publisher does not assume any liability for errors or any consequences arising from the use of the information contained herein.

Contents and Subject Index

PART I WELDING, BRAZING, AND SOLDERING

THE FACTORY OF THE FUTURE	2
<i>J.E. Byman</i>	
Introduction	2
The Maturing Years	2
Flexible Manufacturing Today at VAPD	7
Operation Scenario	9
AUTOMATIC ORBITAL GTA WELDING: HIGHEST QUALITY WELDS FOR TOMORROW'S HIGH-PERFORMANCE SYSTEMS	11
<i>Barbara K. Henon</i>	
Introduction and Point of View	12
Description of Equipment and Process	14
Orbital Pipe Welding	18
Concluding Remarks	19
AN INTERIM REPORT ON INVESTIGATION OF LOW-TEMPERATURE SOLDERS FOR CRYOGENIC WIND TUNNEL MODELS	20
<i>George C. Firth and Vernon E. Watkins, Jr.</i>	
Introduction	21
Filling Materials Comparisons	23
Program Goals	24
High Tin Solders	25
Tin/Lead Solders	26
Indium Solders	27
Solder-Shear Test	28
Solder-Tensile Test	29

Dynamic Model Wing Specimen	30
Dynamic Model Wing Specimen—Liquid Droplet	31
Conclusions	32
Bibliography	33
 NTF-SOLDERING TECHNOLOGY DEVELOPMENT FOR CRYOGENICS	
<i>E. Thomas Hall, Jr.</i>	34
Introduction	34
Base Metals	35
Solders to be Tested	36
Fluxes Tested	37
Solderability Test	38
Formulas for Evaluating Percent Spreading	39
Physical Testing of Solder	47
Concluding Remarks	50
Bibliography	51
References	51
 PART II	
MECHANICAL FASTENING	
 MECHANICAL FASTENERS FOR ADVANCED COMPOSITE MATERIALS	
<i>Richard C. Landt</i>	54
Introduction	55
Galvanic Compatibility	55
Pull-Through Failures	57
Fastener Rotation	58
Threaded Fastener Galling	58
Installation Damage	59
Conductivity	59
Blind Fasteners	59
Concluding Remarks	63
Reference	63
 THE ALTERNATING SURFACE SEGMENTED LAP JOINT: A DESIGN FOR THIN HIGHLY LOADED JOINTS	
<i>Vernon E. Watkins, Jr. and George C. Firth</i>	64
Introduction	64
NTF Characteristics Impact Model Design	65
Conventional Joint Distortion Tendencies	66
Comparison: New Design Versus Conventional Design	67
Shear Loading Comparisons	68
Pathfinder II Flap Attachments	69
NTF Pathfinder II Wing	70
Conclusions	71
Bibliography	71

AUTOMATIC FASTENING LARGE STRUCTURES—A NEW APPROACH.....	12
<i>Donald F. Lumley</i>	
Introduction.....	73
Discussion	74
System Description	76
Vertical Drill/Rivet Columns—Rotary Positioner	77
Control System.....	79
Rigid Workpiece Location and Clamp	80
Edge Margin and Tooling Hole Resynchronization Vision System	81
Automatic Tool Changer.....	81
Automatic Rivet Selection System	81
Automatic Inspection.....	81
Summary.....	83
STRESS CORROSION RESISTANT FASTENERS.....	84
<i>Thomas A. Roach</i>	
Introduction.....	85
History of Stress Corrosion Failures in Service	86
Laboratory Stress Corrosion Tests	89
Inconel 718	98
Conclusions	99
DERIVATION AND TEST OF ELEVATED TEMPERATURE THERMAL-STRESS-FREE FASTENER CONCEPT	100
<i>James Wayne Sawyer, Max L. Blosser and Robert R. McWithey</i>	
Introduction.....	101
Thermal-Stress-Free Metal Fastener Concept for High-Temperature Joints	103
Thermal Expansion of Thermal-Stress-Free Concept.....	104
Derivation of Thermal-Stress-Free Boundary	105
Thermal-Stress-Free Boundaries	106
Typical Thermal-Stress-Free Fastener Configurations	107
Effect of Design Parameters W and R on Fastener Proportions	108
Thermal-Stress-Free Fastener for Carbon-Carbon Material	109
Carbon-Carbon Low-Thermal-Stress Joint Test Specimen	110
Carbon-Carbon Low-Thermal-Stress Conical Fastener Test	
Program	111
Shear Test Setup for Carbon-Carbon Low-Thermal-Stress Joints	112
Typical Shear Failure Mode for Carbon-Carbon Low-Thermal-Stress Joint	113
Cross Section of Failed Carbon-Carbon Low-Thermal-Stress Joints	114
Shear Strength of Carbon-Carbon Low-Thermal-Stress Joints	115
Summary	116
References	117

PART III
EXPLOSIVE WELDING

EXPLOSIVE WELDING IN THE 1990's	120
<i>Narain S. Lalwaney and Vonne D. Linse</i>	
Introduction	120
Explosive Bonding Process	121
Present Applications	122
Flat-Plate Clads	122
Cylindrical Products	123
Specialty Products	124
Present Status	124
Future Opportunities	125
Needs of the 1990's	126
New Developments	128

PART V SELECTED JOINING TECHNIQUES

SOLID-STATE BONDING OF SUPERPLASTIC ALUMINUM ALLOY

7475 SHEET	226
-----------------------------	-----

Thomas D.S. Byun and Ramsevak B. Vastava

Introduction	226
Features of Solid-State Bonding	227
Process Parameters for Solid-State Bonding	228
Surface Cleaning Procedure	229
Lap Shear Specimen	230
Effects of Intermediate Layers and Amount of Deformation on Bond Strength	231
Completion of Solid-State Bonding	232
Chemical Composition of Base and Filler Alloys	233
Element Diffusion Profile Across Bond Interface	234
Quantitative Analysis of Zinc	235
Microstructure and Microhardness of Solid-State Bonded SPA 7475	235
Bonding Time vs. Bond Strength	237
Effect of Postbond Heat-Treatment on Bond Strength	238
SEM Fractographs of Bonding Interface Showing Insufficient Bonding	239
SEM Fractographs of Bonding Interface Showing Sound Bonding	240
Applications for Solid-State Bonding	241
Grain Structure of Superplastic Aluminum 7475	242
Deformation Characteristics of Superplastic Aluminum 7475	243
Integrally Stiffened Structures for Potential SPF/SSB Application	244
Conclusions	245

EVALUATION OF SUPERPLASTIC FORMING AND WELD-BRAZING FOR FABRICATION OF TITANIUM COMPRESSION PANELS

PANELS	246
