

A black and white photomicrograph showing a dense cluster of tumor cells. The cells are various sizes and shapes, some appearing more rounded while others are elongated or spindle-shaped. They are set against a dark, textured background, likely representing a tissue culture dish or a biological sample.

Preface

The study of cultured human tumor cells is a most obvious approach in experimental human cancer research. For many techniques in virology, immunology, biochemistry, and biophysics, for example, large amounts of cells may be required and such quantities are usually provided only when the cultures develop into established cell lines; when this happens, thorough characterization also becomes possible. The development of cell lines, therefore, is of prime importance. Recent major advances in research with animal cell systems seem to be a prologue for present and future efforts directed toward work with human tumor cells in culture. Conceivably, the most significant results in cancer research may develop from work with such cells, and so the time seemed right to define the present state of our knowledge. This is the first book dedicated exclusively to the subject: human tumor cells *in vitro*. Although some of the fundamental aspects in the cultivation of human tumor cells, and the extent to which they represent human cancer *in vivo* are still unclear, I asked a number of the leading investigators in this area of research to collect and evaluate previous and present contributions, and to offer their thoughts on the questions to which answers are not yet available.

Many of the chapters are concerned with techniques of cultivation. Cultures from some types of tumors have grown well; in many cases they have given rise to established cell lines. Other types have shown less encouraging results, and there are still tumors which are not represented as cell lines. Although many tumor cell lines have become available, considering the numerous attempts, success has usually been the exception.

Some of the problems faced daily in the tissue culture laboratory may seem trivial. For example, are the cells we observe in early cultures actually

the tumor cells, or are they derived from other cells of the tumor tissue? Contamination with extraneous cells is known to occur in work with established cell lines. Unfortunately, there is evidence that many investigations have been carried out without proper attention to such problems. This book contains information about new and old methods for monitoring and evaluation of the cultured cells as to malignancy and confirmation of origin. Other chapters are oriented more toward explorative research approaches employing human tumor cells, for example, search for causative viruses.

If future trends in cancer research will be toward further exploration of human tumor cell systems as model systems for human cancer, and toward greater attention to cell characterization, the efforts that have gone into this book will not have been needless. I am grateful to all the contributors and to the staff of Plenum Publishing, Inc. A special thanks to Shirley DeVore and Gwendolyn Holmes for their work in attending to the many details of the book and to the preparation of the list of published cell lines established from human tumors.

Contents

1 Separation of Tumor Cells from Fibroblasts

JOHN A. SYKES

1. Introduction	1
2. Methodology of Others	2
3. Experimental Studies—Materials and Methods	2
3.1. Cells	2
3.2. Density Gradients	3
3.3. Ficoll Solutions	3
3.4. Preparation of Gradients	5
3.5. Centrifugation	6
3.6. Fraction Collection	6
3.7. Density Determinations	7
3.8. Cell Counts and Cell Diameters	7
3.9. Virus Studies	7
3.10. Evaluation of Cultures	8
4. Results	8
5. Discussion	18
6. Summary	21
7 References	22

2 Development of Media for Isolation and Cultivation of Human Cancer Cells

ALBERT LEIBOVITZ

1. Introduction	23
2. Isolation of Cancer Cells from Human Solid Tumors	26
2.1. Tissue Fragments or Minces	27
2.2. Spillout Techniques	31
2.3. Ascites and Pleural Fluids	31
2.4. Enzymes	32
2.5. Discussion	34
3. Development of Media for the Cultivation of Cancer Cells	38
4. References	44

3 New Approaches to the Cultivation of Human Breast Carcinomas

ETIENNE Y. LASFARGUES

1. Introduction	51
2. Methods of Explanation	52
2.1. Importance of Tumor Morphology	52
2.2. Techniques of Cultivation	54
2.3. Maintenance and Subcultivation	62
2.4. Causes for Failure	70
3. Applications of Cell Cultures to Breast Cancer Research	70
3.1. Detection of Hormone Dependency	72
3.2. Diagnostic Procedures	72
4. Conclusions	73
5. References	74

4 Old and New Problems in Human Tumor Cell Cultivation

RE尔DA M. CAILLEAU

1. Introduction	79
2. Types of Cells Found in Human Breast Carcinomas and Pleural Effusions	81

2.1. Fibroblasts	82
2.2. Mesothelial-like Cells	82
2.3. Other Cells	86
2.4. Tumor Cells	86
3. Means of Separating the Various Cell Types Present	86
3.1. Mechanical, Physical, and Physiological	94
3.2. Enzymatic	95
3.3. Modifications in Media	96
4. Presence or Absence of Mycoplasmas, Viruses, and Other Contaminants: Implications	99
5. Identification of Cultured Cells	100
5.1. Pathology	100
5.2. Staining and Photography	100
5.3. Enzymatic Differences	101
5.4. Chromosomes	101
5.5. Transplantation	101
6. Proof That Cells Cultured Are the Tumor Cells of Origin	102
7. Isolation of a Metastatic Breast Tumor Cell Line from Pleural Effusion	104
8. Conclusion	106
9. Addendum	108
10. References	108

5 New Human Tumor Cell Lines

JØRGEN FOGH AND GERMAIN TREMPE

1. Introduction	115
2. Methods of Collection of Tumor Specimens	116
2.1. Solid Tumors or Metastases	116
2.2. Effusions	117
2.3. Normal Tissue	118
3. Methods of Preparation and Initial Culture	118
3.1. Solid Tumors	118
3.2. Effusions	118
3.3. Normal Tissue	119
3.4. Nutrition	119
4. Thirty-One New Cell Lines	119
4.1. General Characteristics	119
4.2. Increase in Cell Population	124
4.3. Chromosome Analysis	124

4.4. Tumor Production in Nude Mice	133
4.5. Electron Microscopy	133
5. Discussion	133
6. Establishment of a Human Tumor Cell Line Collection	139
7. References	141
8. Appendix: Published Cell Lines Established from Human Tumors	142
8.1. Carcinomas	142
8.2. Sarcomas	148
8.3. Nerve Tumors	150
8.4. Melanomas	152
8.5. Miscellaneous Tumors	153
8.6. Patients with Hematopoietic Malignancies	154

6 Human Brain Tumor Cells in Matrix Culture

TEDDY HOLMSTRÖM

1. Introduction	161
2. General Matrix Culture Techniques	162
2.1. Sponge Matrix	162
2.2. Embryonic Tissues	163
2.3. Fibrin Foam	163
3. Growth Behavior of Various Tumors	164
3.1. Meningiomas	164
3.2. Neurinomas	164
3.3. Gliomas	165
3.4. Others	168
4. Influence of Various Factors on Growth	168
4.1. Effect of Various Human Sera	168
4.2. Effect of Chick Mesonephros on Gliomas	170
4.3. Effect of Nerve Growth Factor on Neurinomas	171
5. Reaggregation of Cells from Primary Monolayer Cultures	171
5.1. Glioma Cells and Normal Glia Cells	171
5.2. Meningiomas	172
5.3. Neurinomas	172
6. Conclusions	172
7. References	173

7 Neoplastic Human Glia Cells in Culture

JAN PONTÉN

1. Introduction	175
2. Technical Procedures	176
2.1. Treatment of the Biopsy	178
2.2. The Primary Outgrowth	178
2.3. Serial Passage	179
2.4. Storage	179
3. Determinants for the Establishment of Permanent Glioma Lines	179
4. Properties of Neoplastic Human Glia <i>in Vitro</i>	180
4.1. Morphological Spectrum	185
4.2. Medium Requirements	185
4.3. Formation of Permanent Lines	185
4.4. Density-Dependent Proliferation Control: Topoinhibition	185
4.5. Control of Cell Movement	192
4.6. The Glioma Cell Surface	194
4.7. Interactions with Normal Cells	197
4.8. Immunological Properties	198
4.9. Chromosomes	199
4.10. Infection by Oncogenic Viruses	200
4.11. Identification Problems	201
5. Glioma Lines as Models for Neoplasia	202
6. References	204

8 Current Research with Organ Cultures of Human Tumors

ET. WOLFF AND EM. WOLFF

1. Introduction—Historical	207
2. Steps Leading to the Culture of Organized Tumors <i>in Vitro</i>	209
2.1. Organ Culture <i>in Vitro</i>	209
2.2. Heterologous Associations of Embryonic Organs <i>in Vitro</i> : Chimeras of Chick and Mouse Organs	210
2.3. Associations of Embryonic Organs of the Chick with Mammalian Tumors	210

3. Techniques	211
3.1. Cultures of Human Tumors on Mesonephros	212
3.2. Cultures on Mesonephros with Interposition of a Vitelline Membrane or a Dialysis Membrane	212
3.3. Cultures on Nutrient Media Without Embryonic Organs . .	214
4. Results	215
4.1. Organotypic Culture of Cells Previously in Cell Culture .	215
4.2. Short-Term Cultures	216
4.3. Long-Term Cultures	220
4.4. Analysis of Nutritive Requirements of Tumors in <i>in Vitro</i> Cultures	222
4.5. Applications of the Organized Culture of Human Tumors .	235
5. References	237

9 Metabolic Gradients in Tissue Culture Studies of Human Cancer Cells

JOSEPH LEIGHTON AND RUY TCHAO

1. Introduction	241
2. Examples of Metabolic Gradients in Multicellular Organisms .	242
2.1. Invertebrates	242
2.2. Normal Mammalian Organs	243
2.3. Solid Neoplasms	243
3. Metabolic Gradients in Three-Dimensional Organotypic or Histotypic Cultures on Collagen-Coated Cellulose Sponge . . .	246
3.1. Organotypic Culture of Tumor Explants	246
3.2. Experimental Combinations of Cells	247
4. Gradients in Monolayer Growth: Meniscus-Gradient Culture .	250
4.1. Origins of the Meniscus-Gradient Method	252
4.2. Current Techniques for Epithelial Cell Lines	253
4.3. Standardization of Technique	256
5. Application of the Meniscus-Gradient Method	258
5.1. Characterization of Cell Lines	258
5.2. Diagnostic Evaluation of Clinical Tumors	260
5.3. Experimental Therapeutics	260
5.4. Carcinogenesis and Other Problems	262
6. Perspectives	262
7. References	264

10 Human Lung Cancer in Tissue Culture

RUSSELL P. SHERWIN AND ARNIS RICHTERS

1. Introduction	267
1.1. The Varieties of Pneumothelial Cancers	267
1.2. The Concept of the Parent Cell	268
2. Methodology and Summary of Results	268
2.1. The Tissue Culture Preparations	268
2.2. Cancer Yield in Primary Cultures	269
3. Cytostructural Expressions of Lung Cancer in Culture	272
3.1. Semiorgan (Organotypic) Cultures	272
3.2. Histo cultures (Organoid Cultures)	273
3.3. Monolayers (Sheets and Individual Cells)	276
3.4. Multilayers (Active and Passive)	285
4. Benign Neoplasia Atypical Cellular Proliferation, and Normal Cell Populations of the Lung	285
4.1. Epithelial Cells	285
4.2. Mesenchymal Cells	286
4.3. Leukocytic-Histiocytic Cells	286
5. Future Directions and Goals	288
5.1. Clinical Applications	288
5.2. Basic Science Applications	296
6. References	296

11 Cell Lines from Humans with Hematopoietic Malignancies

GEORGE E. MOORE

1. Introduction	299
2. Establishment of Hematopoietic Cell Lines	300
3. Practical Methods of Preparing Initial Cultures from the Blood	302
4. Growth Stimulants	304
5. Cultures of Bone Marrow, Lymph Nodes, and Biopsies	307
6. Representative Malignant Cell Lines	308
