New Advanced Materials

Economic Dynamics and European Strategy

A Report from the FAST Programme of the
Commission of the European Communities

English Version Edited by: Marc J. Ledoux

In Cooperation with:

Isabelle Boudoux, Philippe Capdevielle, Michèle Forte
Frédéric Heran, Jean-Alain Heraud, Danièle Kieny, Patrick
Llerena, Rémy Risser, Renate Schwarz and Marc Willinger

With the Assistance of:

Yves Ayrault, Laurent Bach, Godefroy Dang Nguyen
and Jean Troton

Translated by: M. Bettison, I. Smith and R. Tanner

Introducing the Research Team which Carried out the Study

Study directors and editors of the final report

Patrick COHENDET,

Professor of economic sciences, co-director of BETA (Bureau d'Economie Théorique et Appliquée) ;

Marc-Jacques LEDOUX,

CNRS (Centre National de Recherche Scientifique - national scientific research centre) research officer, Chemistry Department, Université Louis Pasteur ;

Ehud ZUSCOVITCH,

Lecturer in economic sciences, Université Louis Pasteur.

Assisted with the study and the drafting of the report

Isabelle BOUDOUX,

Documentalist at the Université Louis Pasteur (general documentation for the study) ;

Philippe CAPDEVIELLE,

Researcher with Cia-CEREQ/BETA (co-drafting of Chapters I.2, II.3, III.3 and drafting of the technical appendix on steels in French edition) ;

Michèle FORTE,

Visiting lecturer, Strasbourg III University (co-drafting of Chapter V.4) ;

Frédéric HERAN,

Researcher with Cia-CEREQ/BETA (co-drafting of Chapter V.4) ;

Jean-Alain HERAUD,

Lecturer in economic sciences, Université Louis Pasteur (co-drafting of Chapter IV.2) ;

Danièle KIENY,

Studies manager at the Strasbourg Chamber of Commerce and Industry (general documentation for the study ; preparation of the technical appendix on ceramics in French edition) ;

Rémy RISSER,

Researcher with BETA (co-drafting of Chapters I.2, II.3, III.1, III.3 and technical appendix on plastics in French edition);

Patrick LLERENA,

Researcher with BETA, Docteur d'Etat (drafting of Chapter II.5) ;

Renate SCHWARZ,

Researcher with BETA, (co-drafting of the technical appendix on plastics in French edition and contribution to section V.2.3) ;

Marc WILLINGER,

Visiting lecturer, Strasbourg III University (drafting of Chapters II.2 and II.4, co-drafting of Chapter III.1 and drafting of the technical appendix on composites in French edition).

Assisted with the drafting of the final report

Yves AYRAULT,

Director of the Strasbourg School of Architecture (Chapter III.3);

Laurent BACH

Researcher with BETA (section V.3.1) ;

Godefroy DANG NGUYEN,

Lecturer, CNET (Centre National d'Etudes des Télécommunications - national telecommunications research centre) (section IV.1.2) ;

Jean TROTON,

Researcher with BETA (section V.3.1).

Layout and typing of the final report

Christine DEMANGE and Sandra ZEVIAN,
BETA Secretariat.

Supervision of the study in the Commission

For the FAST Project

Riccardo PETRELLA,

FAST Project Director.

Werner WOBBE.

For the EURAM Project

J.G. WURM,

Head of EURAM Programme on Materials Technology.

The BETA team wishes to thank all those who contributed through their ideas and support to the considerations presented in this report, and in particular :

Jean-Claude BERNIER,

Professor, Strasbourg, Ecole des Hautes Etudes Européennes des Industries Chimiques, for many useful discussions on the future of engineering ceramics ;

Catherine GARDETTE,

(Cabinet Arthur Andersen, Strasbourg), who initiated the group's consideration of packaging materials ;

Sonia GEORGENTHUM,

(Alsace Regional Authority), who initiated the group's consideration of semiconductors ;

Pierre-François GOBIN,

Professor, materials sciences, INSA (Centre National de la Recherche Scientifique - national scientific research centre), Lyons, many of whose ideas are embodied in the text ;

D. EVANS and D.M. JACOBSON,

(GEC Hirst Research Centre, Wembley, United Kingdom) for their contribution on metal materials ;

Dominique MUSTER,

(research laboratory of the Stomatology and Maxillo-Facial Surgery Department, University Louis Pasteur, for his contribution on biomaterials ;

Pierre PANISSOD,

Research Director CNRS, LMSES, Université Louis Pasteur ;

Paul SIFFERT,

Professor, PHASE laboratory director, for his unfailing support, particularly during the MRS Colloquy ;

Pierre WIPPLER,

Professor, Charles Sadron Laboratory, CNRS-Université Louis Pasteur.

Various events (colloquies, congresses, seminars, talks, etc ...) also brought the members of the research team into contact with people whose ideas have been incorporated into this report. BETA owes special thanks to Jean-Pierre CAUSSE, Deputy Managing Director, responsible for research (Saint-Gobain Company), Catherine BLUNDEN (Chargée de mission, CGP-Commissariat Général du Plan), Pierre FRECHET, Director of Technology (Rhône-Poulenc) and Jean HANUS, Professor, director of the CNRS Projet Interdisciplinaire Mécanique des Matériaux, for profitable exchanges during the preparation of "Forecast 2005" (CGP-CNRS) ; all members of the Lyons ECT team whom they met at a seminar in Arc-et-Senans and who, headed by Henri JACOT, are working on a further materials project.

Lastly, the Materials Centre in Strasbourg provided the group with a most fruitful and stimulating atmosphere in which to carry out this task.

	Page
INTRODUCING THE RESEARCH TEAM WHICH CARRIED OUT THE STUDY	V
Table of contents	IX
Foreword	1
INTRODUCTION	2
<u>PART I : A TRIAL DEFINITION OF MATERIALS : TOWARDS A DEFINITION OF MATERIALS TO ASSIST THE UNDERSTANDING OF CURRENT CHANGES</u>	21
<u>CHAPTER I.1 : "New" Materials versus "Old" Materials : a Groundless Controversy</u>	22
I.1.1 - "New" materials	24
I.1.2 - "Old" materials	27
<u>CHAPTER I.2 : From Macroscopic to Microscopic Industrial Mastery of Materials : the Characteristics of the New Materials</u>	32
I.2.1 - Characteristics of materials in the growth economy (1950-1970)	32
I.2.1.1 - Technical characteristics : macroscopic mastery of materials	32
I.2.1.2 - Economic characteristics	33
I.2.1.3 - Limitation of variety	35
I.2.2 - New materials : a response to the appearance of new constraints (1970-1980)	36
I.2.3 - Microscopic mastery of materials and its consequence	41
	IX

<u>CHAPTER I.3</u> : Structural Materials and Functional Materials	44
I.3.1 - Structural materials	44
I.3.2 - Functional materials	48
I.3.3 - Comments	50
 <u>PART II</u> : STRUCTURAL MATERIALS	 51
<u>CHAPTER II.1</u> : Introduction : Variety, Complexity, Integration. The Role of Structural Materials in the Transition to a New Information-rich Production System	51
II.1.1 - The growth of variety	52
II.1.2 - The growth of complexity	53
II.1.3 - New methods and the integration process	54
II.1.4 - Study plan for structural materials	58
<u>CHAPTER II.2</u> : Intra-materials Variety : Competition and Know-how as Exemplified by Composites	59
II.2.1 - Composite materials : the goals of competition	60
II.2.1.1 - Historical background	60
II.2.1.2 - Technical description	61
II.2.1.3 - Learning and dissemination of innovation	62
II.2.2 - Strategy and competition in composite materials	64
II.2.2.1 - Integration of bodies of knowledge and functional redesign	64
- The evolution of the conceptual approach to material	64

- Redesign of components by integration	66
II.2.2.2 - Manufacturing processes and acquisition of knowledge	70
- Analysis of the composites "route"	70
- Alternative knowledge acquisition patterns	71
<u>CHAPTER II.3</u> : "Inter-materials" Variety and the Overchoice Phenomenon	74
II.3.1 - The limits to overchoice : towards alliances of materials	75
II.3.2 - The coherence of overchoice	82
II.3.3 - Management of variety	86
II.3.3.1 - Scientific and technological management of variety	87
II.3.3.2 - Industrial management of variety	88
II.3.3.3 - Commercial management of variety	89
II.3.3.4 - Strategic management of variety	90
II.3.3.5 - Organizational management of variety	91
<u>CHAPTER II.4</u> : Transient and Permanent Variety. From Management of Uncertainty to Management of Complexity	92
II.4.1 - Management of transition	94
II.4.1.1 - Management of substitutions	95
- Constitution of passive portfolios : the value of options in an uncertain world	96
- Constitution of active portfolios : accelerating	97

or impeding the dissemination of new materials

II.4.1.2 - Pursuit of complementarity	100
II.4.2 - Mastering complexity	104
II.4.2.1 - Information acquisition	105
- Transaction costs and variety-derived economies	105
- Acquisition of technical knowledge : organizational flexibility	110
II.4.2.2 - The firm in an information-rich production system : management of information	112
- Simplification of the internal environment through algorithmic formulation of functions	112
- Mastering the external environment : emergence of the coordination function	114
<u>CHAPTER II.5</u> : Reducing of Complexity through Integration	116
II.5.1 - Know-how and acquisition of information	117
II.5.1.1 - Strategies and know-how	117
II.5.1.2 - Strategies and processes of information acquisition	123
II.5.2 - Forms and effects of integration processes	125
II.5.2.1 - Forms of inter-firm integration	125
- Horizontal and/or cross-integration	126
- Vertical quasi-integration	128
- Full vertical integration	129

II.5.2.2 - Integration processes within the firm	130
<u>PART III : STRUCTURAL MATERIALS : THE MAIN AREAS OF APPLICATION</u>	141
<u>CHAPTER III.1 : New Materials and Transport</u>	142
III.1.1 - Substitution of materials in the pursuit of weight reduction : the effect of the energy constraint	144
III.1.1.1 - The shape of the trend towards weight reduction	145
- Motives	145
- Research programmes	148
III.1.1.2 - The principal substitutions	151
- Aeronautics : composites versus aluminium-lithium	151
- Motor vehicles : plastics versus metal	153
- Other modes of transport	159
III.1.1.3 - The limits to weight reduction : towards structural adaptation	160
III.1.2 - Material substitutions related to prospective redesign : the pressure of the industrial constraint	162
III.1.2.1 - The development of aircraft structures and engines	163
- Component redesign using composites	163
- Improving the efficiency of engine systems	166
III.1.2.2 - The industrial use of new materials in motor vehicles : present situation and prospects	168

- Engine developments	16
- Developments in bodywork	173
III.1.3 - The transformation of automotive technology and adaptation to demand	180
III.1.3.1 - The role of anticipation or the logic of changeover	181
III.1.3.2 - Adjusting to new patterns of demand	186
- Engineering ceramics and pollution abatement	186
- Engineering plastics and customized demand	188
<u>CHAPTER III.2 : New Materials and Packaging</u>	191
III.2.1 - The various constraints on the packaging sector	192
III.2.1.1 - The consumer	192
III.2.1.2 - Constraints imposed by the authorities	194
- Health requirements	194
- Energy saving requirements	195
- Environment protection requirements	196
- Packaging as information medium	198
III.2.1.3 - Production and distribution constraints	198
III.2.2 - Implications for the development of packaging materials	199
III.2.2.1 - Plastics	202
III.2.2.2 - Packaging "complexes"	205
III.2.2.3 - Other packaging materials	206

III.2.2.4 - An example of competition between packaging materials : the case of the drinks can	206
III.2.3 - Conclusion	209
<u>CHAPTER III.3 : New Materials in Building and Public Works</u>	213
III.3.1 - New materials and adaptation to demand	215
III.3.1.1 - The fall in utilization costs	215
- Energy savings in building	216
- The role of norms and legislation	219
- Maintenance costs of civil engineering works	219
III.3.1.2 - Increase in utilization value	221
III.3.2 - New materials and building sector technology	225
III.3.2.1 - Lighter materials	225
III.3.2.2 - Varied materials	227
III.3.2.3 - More materials produced by the chemical industry	230
III.3.2.4 - Increase in the proportion of "finishing" to "fabric"	231
III.3.3 - New materials and strategies	233
III.3.3.1 - The strategy of downward integration	233
III.3.3.2 - Evolution of building firms	234
III.3.4 - New materials, skills and employment	237

<u>PART IV : FUNCTIONAL MATERIALS</u>	241
<u>CHAPTER IV.1 : Functional Materials and Information</u>	244
IV.1.1 - The establishment of silicon technology	245
IV.1.2 - The convergence between information technology and telecommunications and its implications for the choice of basic materials	249
IV.1.2.1 - The development of opto-electronics	249
IV.1.2.2 - Silicon versus gallium arsenide	251
- Technical advantages of gallium arsenide	252
- Technical advances of silicon	262
IV.1.3 - Constructing an integrated information processing, transmission and display network : the role of other materials	266
IV.1.3.1 - Optical fibres	267
IV.1.3.2 - Other components	271
- In electronics	271
- In opto-electronics	272
IV.1.3.3 - "Peripheral" display and recording components	273
IV.1.4 - Telecommunications - the strategic stakes	275
IV.1.4.1 - The principal determinants in the telecommunications sector	277
- Digitization	277
- Integration of services in one network	278

- The problem of regulations	282
IV.1.4.2 - Implications for the European telecommunications equipment industry	286
<u>CHAPTER IV.2 : Materials and Energy</u>	289
Stop press : Superconducting materials	289
IV.2.1 - Energy budget and materials	291
IV.2.2 - Catalysts	294
IV.2.2.1 - Catalysts : materials or chemicals ?	295
IV.2.2.2 - The challenge to catalysts	297
IV.2.2.3 - Catalytic exhausts	304
IV.2.3 - Diesel and ceramics	310
IV.2.3.1 - The position of diesel	311
IV.2.3.2 - Technologies developing and coming together	312
IV.2.3.3 - Diesel and ceramics : the main lines of technological development	314
IV.2.4 - Permanent magnets	316
<u>CHAPTER IV.3 : Biomaterials and Biotechnology</u>	320
IV.3.1 - The development of materials for biomedical use	321
IV.3.2 - Biosensors and products for analysis	325
IV.3.3 - The use of materials in biotechnological processes	327

<u>PART V</u> : STRATEGIES - ELEMENTS IN AN INDUSTRIAL POLICY AND A POLICY FOR EMPLOYMENT AND SKILLS	329
<u>CHAPTER V.1</u> : Description of Two Development Scenarios for Materials	331
V.1.1 - First scenario : "Growing importance of the phenomenon of variety	331
V.1.1.1 - Importance of the variety-based regime for materials	332
V.1.1.2 - Importance of the variety-based regime for skills	333
V.1.1.3 - Importance of the variety-based regime for industrial structures	334
V.1.2 - Second scenario : "The irreversible ascent of plastics"	335
V.1.2.1 - Advantage of plastics	335
V.1.2.2 - "Plastics" scenario and skills	337
V.1.2.3 - "Plastics" scenario and evolution of industrial structures	338
V.1.3 - Comments on the two scenarios. Certain predominant tendencies in materials	339
<u>CHAPTER V.2</u> : Industrial Strategies in Materials : European Situation	342
V.2.1 - General situation	342
V.2.2 - Europe's dependence in strategic materials	344
V.2.3 - Industrial situation and strategies in structural materials	346
