# Preface to the Third Edition

The main theme of Part B is the description of synthetically useful reactions and the illustration of their application. We have attempted to update the material to reflect the most important advances in synthetic methodology. Because of the extensive developments in the use of organic derivatives of transition metals, as well as of silicon and tin, we have separated the organometallic material into three chapters. Chapter 7 emphasizes organolithium and organomagnesium chemistry and also considers the group IIB metals. Transition metal chemistry is discussed in Chapter 8, with emphasis on copper and palladium intermediates. In Chapter 9, the carbon–carbon bond-forming reactions of organoboranes, silanes, and stannanes are discussed. The increased importance of free-radical reactions in synthesis has led to the incorporation of a section on radical reactions into Chapter 10, in which carbocations, carbenes, and nitrenes are also discussed.

Certainly a major advance in synthetic chemistry during the 1980s was the development of methods for enantioselective synthesis. We have increased the level of attention to stereochemistry in the discussion of many reactions. In areas in which new stereoselective methods have been well developed, such as in aldol condensations, hydroboration, catalytic reduction, and epoxidation, we discuss these methods.

The final chapter discusses some of the general issues which must be addressed in multistep synthesis and provides some illustrative syntheses which can provide the basis for more detailed study of this aspect of synthetic chemistry.

Each chapter contains problems, some of which are new, drawn from the research literature. The level of difficulty varies. Many will be quite challenging to the student, but they should provide a basis for application of the facts and principles which are discussed in the text.

# Contents of Part B

<b>Chapter 1. Alkylation of Nucleophilic Carbon. Enolates and Enamines</b>	1
1.1. Generation of Carbanions by Deprotonation	1
1.2. Regioselectivity and Stereoselectivity in Enolate Formation	5
1.3. Other Means of Generating Enolates	10
1.4. Alkylation of Enolates	11
1.5. Generation and Alkylation of Dianions	19
1.6. Medium Effects in the Alkylation of Enolates	20
1.7. Oxygen versus Carbon as the Site of Alkylation	23
1.8. Alkylation of Aldehydes, Esters, Amides, and Nitriles	27
1.9. The Nitrogen Analogs of Enols and Enolates—Enamines and Imine Anions	30
1.10. Alkylation of Carbon Nucleophiles by Conjugate Addition	39
General References	46
Problems	46
<b>Chapter 2. Reactions of Carbon Nucleophiles with Carbonyl Groups</b>	55
2.1. Aldol Condensation	55
2.1.1. The General Mechanism	55
2.1.2. Mixed Aldol Condensations with Aromatic Aldehydes	58
2.1.3. Control of Regiochemistry and Stereochemistry of Mixed Aldol Condensations of Aliphatic Aldehydes and Ketones	60
2.1.4. Intramolecular Aldol Condensations and the Robinson Annulation	75
2.2. Condensation Reactions of Imines and Iminium Ions	80
2.2.1. The Mannich Reaction	80
2.2.2. Amine-Catalyzed Condensation Reactions	83

2.3.	Acylation of Carbanions . . . . .	84
2.4.	The Wittig and Related Reactions . . . . .	95
2.5.	Reactions of Carbonyl Compounds with $\alpha$ -Trimethylsilyl - Carbanions . . . . .	102
2.6.	Sulfur Ylides and Related Nucleophiles . . . . .	103
2.7.	Nucleophilic Addition-Cyclization . . . . .	109
	General References . . . . .	110
	Problems . . . . .	111
 <b>Chapter 3. Functional Group Interconversion by Nucleophilic Substitution</b>		121
3.1.	Conversion of Alcohols to Alkylating Agents . . . . .	121
3.1.1.	Sulfonate Esters . . . . .	121
3.1.2.	Halides . . . . .	122
3.2.	Introduction of Functional Groups by Nucleophilic Substitution at Saturated Carbon . . . . .	128
3.2.1.	General Solvent Effects . . . . .	128
3.2.2.	Nitriles . . . . .	130
3.2.3.	Azides . . . . .	131
3.2.4.	Alkylation of Amines and Amides . . . . .	132
3.2.5.	Oxygen Nucleophiles . . . . .	133
3.2.6.	Sulfur Nucleophiles . . . . .	136
3.2.7.	Phosphorus Nucleophiles . . . . .	136
3.2.8.	Summary of Nucleophilic Substitution at Saturated Carbon	137
3.3.	Nucleophilic Cleavage of Carbon-Oxygen Bonds in Ethers and Esters . . . . .	141
3.4.	Interconversion of Carboxylic Acid Derivatives . . . . .	144
3.4.1.	Preparation of Reaction Reagents for Acylation . . . . .	145
3.4.2.	Preparation of Esters . . . . .	151
3.4.3.	Preparation of Amides . . . . .	152
	Problems . . . . .	156
 <b>Chapter 4. Electrophilic Additions to Carbon-Carbon Multiple Bonds</b> . . . . .		167
4.1.	Addition of Hydrogen Halides . . . . .	167
4.2.	Hydration and Other Acid-Catalyzed Additions . . . . .	170
4.3.	Oxymercuration . . . . .	171
4.4.	Addition of Halogens to Alkenes . . . . .	176
4.5.	Electrophilic Sulfur and Selenium Reagents . . . . .	185
4.6.	Addition of Other Electrophilic Reagents . . . . .	189
4.7.	Electrophilic Substitution Alpha to Carbonyl Groups . . . . .	191
4.8.	Additions to Allenes and Alkynes . . . . .	195
4.9.	Addition at Double Bonds via Organoboranes . . . . .	200
4.9.1.	Hydroboration . . . . .	200

4.9.2. Reactions of Organoboranes . . . . .	203
4.9.3. Enantioselective Hydroboration . . . . .	207
4.9.4. Hydroboration of Alkynes . . . . .	210
General References . . . . .	212
Problems . . . . .	212
<b>Chapter 5. Reduction of Carbonyl and Other Functional Groups . . . . .</b>	<b>219</b>
5.1. Addition of Hydrogen . . . . .	219
5.1.1. Catalytic Hydrogenation . . . . .	219
5.1.2. Other Hydrogen-Transfer Reagents . . . . .	230
5.2. Group III Hydride-Donor Reagents . . . . .	232
5.2.1. Reduction of Carbonyl Compounds . . . . .	232
5.2.2. Reduction of Other Functional Groups by Hydride Donors	244
5.3. Group IV Hydride Donors . . . . .	248
5.4. Hydrogen Atom Donors . . . . .	250
5.5. Dissolving-Metal Reductions . . . . .	253
5.5.1. Addition of Hydrogen . . . . .	253
5.5.2. Reductive Removal of Functional Groups . . . . .	257
5.5.3. Reductive Carbon-Carbon Bond Formation . . . . .	261
5.6. Reductive Deoxygenation of Carbonyl Groups . . . . .	265
General References . . . . .	269
Problems . . . . .	270
<b>Chapter 6. Cycloadditions, Unimolecular Rearrangements, and Thermal Eliminations . . . . .</b>	<b>283</b>
6.1. Cycloaddition Reactions . . . . .	283
6.1.1. The Diels-Alder Reaction: General Features . . . . .	284
6.1.2. The Diels-Alder Reaction: Dienophiles . . . . .	289
6.1.3. The Diels-Alder Reaction: Dienes . . . . .	296
6.1.4. Intramolecular Diels-Alder Reactions . . . . .	298
6.2. Dipolar Cycloaddition Reactions . . . . .	300
6.3. [2 + 2] Cycloadditions and Other Reactions Leading to Cyclobutanes . . . . .	307
6.4. Photochemical Cycloaddition Reactions . . . . .	310
6.5. [3,3]-Sigmatropic Rearrangements: Cope and Claisen Rearrangements . . . . .	316
6.6. [2,3]-Sigmatropic Rearrangements . . . . .	328
6.7. Ene Reactions . . . . .	332
6.8. Unimolecular Thermal Elimination Reactions . . . . .	336
6.8.1. Cheletropic Elimination . . . . .	336
6.8.2. Decomposition of Cyclic Azo Compounds . . . . .	339

6.8.3. $\beta$ -Eliminations Involving Cyclic Transition States . . . . .	343
General References . . . . .	349
Problems . . . . .	350
<b>Chapter 7. Organometallic Compounds of Group I and II Metals . . . . .</b>	<b>365</b>
7.1. Preparation and Properties of Organolithium and Organomagnesium Compounds . . . . .	365
7.2. Reactions of Organolithium and Organomagnesium Compounds . . . . .	374
7.2.1. Reactions with Alkylating Agents . . . . .	374
7.2.2. Reactions with Carbonyl Compounds . . . . .	376
7.3. Organic Derivatives of Group IIB Metals . . . . .	388
7.3.1. Organozinc Compounds . . . . .	388
7.3.2. Organocadmium Compounds . . . . .	392
7.3.3. Organomercury Compounds . . . . .	392
7.4. Organocerium Compounds . . . . .	394
General References . . . . .	394
Problems . . . . .	395
<b>Chapter 8. Reactions Involving the Transition Metals . . . . .</b>	<b>401</b>
8.1. Reactions Involving Organocupper Intermediates . . . . .	401
8.2. Reactions Involving Organopalladium Intermediates . . . . .	414
8.3. Reactions Involving Organonickel Compounds . . . . .	422
8.4. Reactions Involving Rhodium, Iron, and Cobalt . . . . .	425
8.5. Organometallic Compounds with $\pi$ Bonding . . . . .	427
General References . . . . .	431
Problems . . . . .	431
<b>Chapter 9. Carbon-Carbon Bond-Forming Reactions of Compounds of Boron, Silicon, and Tin . . . . .</b>	<b>443</b>
9.1. Organoboron Compounds . . . . .	443
9.1.1. Synthesis of Organoboranes . . . . .	443
9.1.2. Carbon-Carbon Bond-Forming Reactions . . . . .	445
9.2. Organosilicon Compounds . . . . .	464
9.2.1. Synthesis of Organosilanes . . . . .	464
9.2.2. Carbon-Carbon Bond-Forming Reactions . . . . .	465
9.3. Organotin Compounds . . . . .	474
9.3.1. Synthesis of Organostannanes . . . . .	474
9.3.2. Carbon-Carbon Bond-Forming Reactions . . . . .	475
General References . . . . .	484
Problems . . . . .	485

<b>Chapter 10. Reactions Involving Highly Reactive Electron-Deficient Intermediates . . . . .</b>	<b>493</b>
10.1. Reactions Involving Carbocation Intermediates . . . . .	493
10.1.1. Carbon-Carbon Bond-Formation Involving Carbocations . . . . .	493
10.1.2. Rearrangements of Carbocations . . . . .	499
10.1.3. Related Rearrangements . . . . .	506
10.1.4. Fragmentation Reactions . . . . .	509
10.2. Reactions Involving Carbenes and Nitrenes . . . . .	511
10.2.1. Structure and Reactivity of Carbenes . . . . .	512
10.2.2. Generation of Carbenes . . . . .	516
10.2.3. Addition Reactions . . . . .	522
10.2.4. Insertion Reactions . . . . .	528
10.2.5. Rearrangement Reactions . . . . .	531
10.2.6. Related Reactions . . . . .	532
10.2.7. Nitrenes and Related Intermediates . . . . .	535
10.2.8. Rearrangements to Electron-Deficient Nitrogen . . . . .	536
10.3. Reactions Involving Free-Radical Intermediates . . . . .	541
10.3.1. Sources of Radical Intermediates . . . . .	542
10.3.2. Introduction of Functionality by Radical Reactions . . . . .	543
10.3.3. Addition Reactions of Radicals with Substituted Alkenes . . . . .	545
10.3.4. Cyclization of Free-Radical Intermediates . . . . .	551
10.3.5. Fragmentation and Rearrangement Reactions . . . . .	555
General References . . . . .	558
Problems . . . . .	559
<b>Chapter 11. Aromatic Substitution Reactions . . . . .</b>	<b>571</b>
11.1. Electrophilic Aromatic Substitution . . . . .	571
11.1.1. Nitration . . . . .	571
11.1.2. Halogenation . . . . .	572
11.1.3. Friedel-Crafts Alkylations and Acylations . . . . .	575
11.1.4. Electrophilic Metalation . . . . .	585
11.2. Nucleophilic Aromatic Substitution . . . . .	588
11.2.1. Aromatic Diazonium Ions as Synthetic Intermediates . . . . .	588
11.2.2. Substitution by the Addition-Elimination Mechanism . . . . .	596
11.2.3. Substitution by the Elimination-Addition Mechanism . . . . .	599

# Contents of Part A

## **Chapter 1. Chemical Bonding and Structure**

- 1.1. Valence Bond Approach to Chemical Bonding
- 1.2. Bond Energies, Lengths, and Dipoles
- 1.3. Molecular Orbital Theory and Methods
- 1.4. Qualitative Application of Molecular Orbital Theory
- 1.5. Hückel Molecular Orbital Theory
- 1.6. Perturbation Molecular Orbital Theory
- 1.7. Interactions between  $\sigma$  and  $\pi$  Systems—Hyperconjugation
- General References
- Problems

## **Chapter 2. Stereochemical Principles**

- 2.1. Enantiomeric Relationships
- 2.2. Diastereomeric Relationships
- 2.3. Stereochemistry of Dynamic Processes
- 2.4. Prochiral Relationships
- General References
- Problems

## **Chapter 3. Conformational, Steric, and Stereoelectronic Effects**

- 3.1. Steric Strain and Molecular Mechanics
- 3.2. Conformations of Acyclic Molecules
- 3.3. Conformations of Cyclohexane Derivatives
- 3.4. Carbocyclic Rings Other Than Six-Membered

- 3.5. The Effect of Heteroatoms on Conformational Equilibria
  - 3.6. Molecular Orbital Methods Applied to Conformational Analysis
  - 3.7. Conformational Effects on Reactivity
  - 3.8. Angle Strain and Its Effect on Reactivity
  - 3.9. Relationships between Ring Size and Facility of Ring Closure
  - 3.10. Torsional and Stereoelectronic Effects on Reactivity
- General References  
Problems

#### **Chapter 4. Study and Description of Organic Reaction Mechanisms**

- 4.1. Thermodynamic Data
  - 4.2. Kinetic Data
  - 4.3. Substituent Effects and Linear Free-Energy Relationships
  - 4.4. Basic Mechanistic Concepts: Kinetic versus Thermodynamic Control, Hammond's Postulate, and the Curtin-Hammett Principle
    - 4.4.1. Kinetic versus Thermodynamic Control
    - 4.4.2. Hammond's Postulate
    - 4.4.3. The Curtin-Hammett Principle
  - 4.5. Isotope Effects
  - 4.6. Isotopes in Labeling Experiments
  - 4.7. Characterization of Reaction Intermediates
  - 4.8. Catalysis by Acids and Bases
  - 4.9. Lewis Acid Catalysis
  - 4.10. Solvent Effects
  - 4.11. Structural Effects in the Gas Phase
  - 4.12. Stereochemistry
  - 4.13. Conclusion
- General References  
Problems

#### **Chapter 5. Nucleophilic Substitution**

- 5.1. The Limiting Cases—Substitution by the Ionization ( $S_N1$ ) Mechanism
- 5.2. The Limiting Cases—Substitution by the Direct Displacement ( $S_N2$ ) Mechanism
- 5.3. Detailed Mechanistic Description and Borderline Mechanisms
- 5.4. Carbocations
- 5.5. Nucleophilicity and Solvent Effects
- 5.6. Leaving Group Effects
- 5.7. Steric and Strain Effects on Substitution and Ionization Rates
- 5.8. Substituent Effects on Reactivity
- 5.9. Stereochemistry of Nucleophilic Substitution

- 5.10. Neighboring-Group Participation
- 5.11. Rearrangements of Carbocations
- 5.12. The Norbornyl Cation and Other Nonclassical Carbocations
- General References
- Problems

## Chapter 6. Polar Addition and Elimination Reactions

- 6.1. Addition of Hydrogen Halides to Alkenes
- 6.2. Acid-Catalyzed Hydration and Related Addition Reactions
- 6.3. Addition of Halogens
- 6.4. Electrophilic Additions Involving Metal Ions
- 6.5. Additions to Alkynes and Allenes
- 6.6. The E<sub>2</sub>, E<sub>1</sub>, and E<sub>1cb</sub> Mechanisms
- 6.7. Orientation Effects in Elimination Reactions
- 6.8. Stereochemistry of E<sub>2</sub> Elimination Reactions
- 6.9. Dehydration of Alcohols
- 6.10. Eliminations Not Involving C—H Bonds
- General References
- Problems

## Chapter 7. Carbanions and Other Nucleophilic Carbon Species

- 7.1. Acidity of Hydrocarbons
- 7.2. Carbanions Stabilized by Functional Groups
- 7.3. Enols and Enamines
- 7.4. Carbanions as Nucleophiles in S<sub>N</sub>2 Reactions
- General References
- Problems

## Chapter 8. Reactions of Carbonyl Compounds

- 8.1. Hydration and Addition of Alcohols to Aldehydes and Ketones
- 8.2. Addition-Elimination Reactions of Aldehydes and Ketones
- 8.3. Addition of Carbon Nucleophiles to Carbonyl Groups
- 8.4. Reactivity of Carbonyl Compounds toward Addition
- 8.5. Ester Hydrolysis
- 8.6. Aminolysis of Esters
- 8.7. Amide Hydrolysis
- 8.8. Acylation of Nucleophilic Oxygen and Nitrogen Groups
- 8.9. Intramolecular Catalysis
- General References
- Problems

**Chapter 9. Aromaticity**

- 9.1. The Concept of Aromaticity
- 9.2. The Annulenes
- 9.3. Aromaticity in Charged Rings
- 9.4. Homoaromaticity
- 9.5. Fused-Ring Systems
- 9.6. Heterocyclic Rings
- General References
- Problems

**Chapter 10. Aromatic Substitution**

- 10.1 Electrophilic Aromatic Substitution Reactions
- 10.2 Structure-Reactivity Relationships
- 10.3 Reactivity of Polycyclic and Heteroaromatic Compounds
- 10.4 Specific Substitution Mechanisms
  - 10.4.1. Nitration
  - 10.4.2. Halogenation
  - 10.4.3. Protonation and Hydrogen Exchange
  - 10.4.4. Friedel-Crafts Alkylation and Related Reactions
  - 10.4.5. Friedel-Crafts Acylation and Related Reactions
  - 10.4.6. Coupling with Diazonium Compounds
  - 10.4.7. Substitution of Groups Other than Hydrogen
- 10.5. Nucleophilic Aromatic Substitution by Addition-Elimination
- 10.6. Nucleophilic Aromatic Substitution by the Elimination-Addition Mechanism
- General References
- Problems

**Chapter 11. Concerted Reactions**

- 11.1 Electrocyclic Reactions
- 11.2 Sigmatropic Rearrangements
- 11.3 Cycloaddition Reactions
- General References
- Problems

**Chapter 12. Free-Radical Reactions**

- 12.1. Generation and Characterization of Free Radicals
  - 12.1.1. Background

- 12.1.2. Stable and Persistent Free Radicals
- 12.1.3. Direct Detection of Radical Intermediates
- 12.1.4. Sources of Free Radicals
- 12.1.5. Structural and Stereochemical Properties of Radical Intermediates
- 12.1.6. Charged Radical Species
- 12.2. Characteristics of Reaction Mechanisms Involving Radical Intermediates
  - 12.2.1. Kinetic Characteristics of Chain Reactions
  - 12.2.2. Structure-Reactivity Relationships
- 12.3. Free-Radical Substitution Reactions
  - 12.3.1. Halogenation
  - 12.3.2. Oxidation
- 12.4. Free-Radical Addition Reactions
  - 12.4.1. Addition of Hydrogen Halides
  - 12.4.2. Addition of Halomethanes
  - 12.4.3. Addition of Other Carbon Radicals
  - 12.4.4. Addition of Thiols and Thiocarboxylic Acids
- 12.5. Intramolecular Free-Radical Reactions
- 12.6. Rearrangement and Fragmentation Reactions of Free Radicals
  - 12.6.1. Rearrangement Reactions
  - 12.6.2. Fragmentation Reactions
- 12.7. Electron Transfer Reactions Involving Transition Metal Ions
- 12.8. S<sub>RN</sub>1 Substitution Processes
  - General References
  - Problems

### **Chapter 13. Photochemistry**

- 13.1. General Principles
- 13.2. Orbital Symmetry Considerations Related to Photochemical Reactions
- 13.3. Photochemistry of Carbonyl Compounds
- 13.4. Photochemistry of Alkenes and Dienes
- 13.5. Photochemistry of Aromatic Compounds
  - General References
  - Problems

### **References for Problems**

# List of Figures

- 1.1. Unsolvated hexameric aggregate of lithium enolate of methyl *t*-butyl ketone
- 1.2. Potassium enolate of methyl *t*-butyl ketone
- 1.3. Crystal structure of dimer of lithium derivative of *N*-phenyl imine of methyl *t*-butyl ketone
- 6.1. Cycloaddition of an alkene and a diene, showing interaction of LUMO of alkene with HOMO of diene
- 6.2. *Endo* and *exo* addition in a Diels–Alder reaction
- 6.3. HOMO–LUMO interactions rationalize regioselectivity of Diels–Alder cycloaddition reactions
- 6.4. Prediction of regioselectivity of 1,3-dipolar cycloaddition
- 6.5. HOMO–LUMO interactions in the [2 + 2] cycloaddition of an alkene and a ketene
- 6.6. A concerted ene reaction corresponds to the interaction of a hydrogen atom with the HOMO of an allyl radical and the LUMO of the enophile and is allowed
- 7.1. Crystal structures of ethylmagnesium bromide
- 7.2. Crystal structure of tetrameric phenyllithium etherate
- 8.1. Representation of  $\pi$  bonding in alkene–transition-metal complexes
- 10.1. Mechanisms for addition of singlet and triplet carbenes to alkenes
- 10.2. Frontier orbital interpretation of radical substituent effects
- 10.3. Chain mechanism for radical addition reactions mediated by trialkylstannyl radicals

# List of Tables

- 1.1. Approximate  $pK$  values for some carbon acids and some common bases
- 1.2. Compositions of enolate mixtures
- 1.3. Relative alkylation rates of sodium diethyl *n*-butylmalonate in various solvents
- 1.4. Enantioselective alkylation of ketimines
- 2.1. Stereoselectivity of lithium enolates toward benzaldehyde
- 2.2. Stereoselectivity of boron enolates toward aldehydes
- 2.3. Stereoselectivity of ester enolates toward aldehydes
- 4.1. Stereochemistry of addition of hydrogen halides to alkenes
- 4.2. Relative reactivity of some alkenes in oxymercuration
- 4.3. Relative reactivity of alkenes and alkynes
- 4.4. Regioselectivity of diborane and alkylboranes toward representative alkenes
- 4.5. Stereoselectivity of hydroboration of cyclic alkenes
- 5.1. Enantiomeric excess for asymmetric catalytic hydrogenation of substituted acrylic acids
- 5.2. Relative reactivity of hydride-donor reducing agents
- 5.3. Stereoselectivity of hydride reducing agents
- 5.4. Reaction conditions for reductive replacement of halogen and tosylate by hydride donors
- 6.1. Representative dienophiles
- 6.2. 1,3-Dipolar compounds
- 6.3. Relative reactivity of substituted alkenes toward some 1,3-dipoles
- 6.4. [3,3]-Sigmatropic rearrangements
- 10.1. Relative rates of addition to alkenes
- 10.2. Classification of carbenes on the basis of reactivity toward alkenes
- 11.1. Relative activity of Friedel-Crafts catalysts
