

ENCYCLOPAEDIA CHIMICA INTERNATIONALIS
(*Cumulative Index Chemicus*)
INTRODUCTION

The six-volume ENCYCLOPAEDIA CHIMICA INTERNATIONALIS consists essentially of a complete reprinting of the issues 1 through 42 of *Index Chemicus*, bound together with all three volumes of the Biennial Cumulative Indexes to this material. Many friends and present or prospective subscribers have long urged us to make available in book form, suitable for reference use, the complete set covered by the Cumulative Biennial Indexes, since many of the early issues became unavailable as they went out of print and were fast becoming collectors' items.

The ENCYCLOPAEDIA contains molecular formulae, structural diagrams and complete bibliographical references for well over 160,000 newly synthesized or newly isolated chemical compounds, — all those reported in the world chemical literature during both 1960 and 1961, as well as a considerable portion of the early 1962 literature. Each of these compounds is made easily accessible for reference through the very complete and multi-faceted indexing process: the molecular formula index permits the reader to refer directly not only to the article number, but also to the compound number within the article. The author index lists alphabetically all authors, senior and junior, by article number. The journal index shows from which issues of which journals any specific compounds were indexed. The special ISI RotaForm index (yellow pages) offers a new dimension in generic searching as it groups together related metallo-organics and generally all compounds having any element in common, so that each compound can be found listed under any of the elements composing it: many generic searches for otherwise difficultly accessible compound classes are now feasible by skillful use of the RotaForm index. Detailed explanations and instructions precede each individual index.

The contents of the six volumes are as follows:

VOLUME ONE -	Molecular Formula Index Author and Journal Index RotaForm Index Articles 1- 1861
VOLUME TWO	Articles 1862 - 4618
VOLUME THREE	Articles 4619 - 7899
VOLUME FOUR	Articles 7900 - 10815
VOLUME FIVE	Articles 10816 - 14131
VOLUME SIX	Articles 14132 - 17099

In consulting the ENCYCLOPAEDIA, the page numbers in the center lower margin, preserved for technical reasons, may now be disregarded, using the article-number approach.

**FIRST BIENNIAL CUMULATIVE INDEX
ISSUES 1 TO 42
ARTICLE NUMBERS 1 TO 17099**

MOLECULAR FORMULA INDEX

NEW CHEMICAL COMPOUNDS 1-01 TO 17099-13

Introduction

This first Biennial Cumulative Index covers the first 42 issues of the *Index Chemicus* representing 17,099 articles, 160,693 molecular formula index entries (approximately 180,000 compounds) and 49,407 authors. It therefore covers all 1960 publications plus virtually all of the world literature bearing 1961 dates as well as a small number of 1962 items. The journal index, which is bound separately, will help the reader to determine quickly the exact extent of coverage.

This biennial index obsoletes and replaces the three earlier cumulative indexes. However, since each abstract has a unique consecutive number, searching can be restricted to any period desired. If you wish to search only the material published after the third cumulative index, you need only check abstract numbers higher than 11222. If you wish to limit your search to issue No. 42, for which no separate index was issued, only abstracts numbered higher than 16734 need to be consulted.

Each column in the molecular formula index is numbered. There are 776 columns in this two year cumulation. Page numbers are also provided.

The new format of this cumulation is quite different than that used in the semi-monthly issues of the *Index Chemicus*. The computer program was written to reduce the size of the index making it possible to include the maximum number of compounds on a single page while retaining the convenience of indented headings. An IBM 7090-1401 computer complex was employed in the preparation of this index. The molecular formula index is supplemented by a new rotated molecular formula index, the RotaForm Index, which has been issued separately. There is also a separate biennial cumulative author and journal index. Additional details on the RotaForm, author and journal indexes are provided in the introduction to those issues. The RotaForm Index provides a new, generic approach to the conventional formula index. Any reader interested in further details on the methods of compiling these indexes is encouraged to request copies of papers we have prepared on those methods.⁽¹⁾

The abstract-compound numbers pertaining to those molecular formulas which were provided or corrected by the author after the publication of the corresponding abstract in the *Index Chemicus*, are preceded by @ (meaning addition: compound originally not indexed) or * (meaning correction: compound originally indexed under erroneous molecular formula). For greater clarity and convenience, the molecular formulas appear at the left hand side of the columns, followed by one or more periods, followed by the compound's address which consists of the abstract number and the

line number. Furthermore, the C-H headings have been indented. When a C-H grouping is continued in the next column, its heading is repeated at the top of that column except if the break occurs in the middle of the addresses for a particular molecular formula (see e.g. top line in column 50).

A hyphen (-) separates a compound number from its abstract number. Commas (,) separate compound numbers appearing in the same abstract, as e.g. in top line, column 51. Diagonal lines (/) separate abstract numbers. The last address for any molecular formula is never followed by a (/) or (-) or (,) and the appearance of any punctuation mark at the end of a line implies that additional addresses for that formula will follow in the next line, column, or page.
