Printer and binder: George Banta Company

PREFACE

In the preface to the first edition of this book, I wrote the following: “COBOL—like the English language—is a dynamic language that is continuously changing and evolving. Similarly, computers, information systems, and data processing are dynamic fields that are also undergoing continual change.

“This text utilizes the most current COBOL program design and coding techniques together with contemporary business computer system concepts. It offers a solid foundation for beginning COBOL students to build upon as their knowledge and skills develop and grow along with the exciting field of computer technology.”

Since those words were written very early in this decade, the COBOL language has been affected by three major developments: (1) the proliferation of microcomputer usage, (2) the increased use of on-line applications, and (3) the promulgation and impending adoption of a new version of the ANS COBOL language standards (commonly called COBOL-8X at the time this is being written).

Goals for the Second Edition

In preparing the second edition, I have sought to include applicable new information about the trends mentioned above—but not at the expense of straying from the ANS COBOL orientation. As a result, appropriate new material pertaining to the 8X standards is incorporated into the text. Unfortunately, COBOL does not yet have standard screen-handling syntax—on-line and microcomputer applications use special implementor-dependent syntax. Thus, this text presents an up-to-date version of the standard language and can be used successfully with any COBOL compiler.

This book has been designed to coordinate with the follow-on companion volume that I wrote after the first edition was published: *Advanced Structured COBOL: Batch, On-Line, and Data-Base Concepts*.

Key Strengths Retained

Response from users of the first edition has been gratifying. In preparing the second edition, I have made a special effort to maintain—and improve—the qualities and features that instructors and students found useful.

Text Organization

The COBOL syntax is presented within the framework of commonly encountered business-system program models. Concepts are developed step by step—proceeding from the simple to the more complex. Each program category builds upon and adds to the knowledge, techniques, and skills developed in the previous one.

<i>Systems concept</i>	<i>Chapter</i>	<i>COBOL coding syntax</i>	<i>Program type</i>	<i>Program name</i>
Data concepts	1	Overview	Read-and-print	EMP-LIST
	2	IDENTIFICATION DIVISION ENVIRONMENT DIVISION DATA DIVISION	Read-and-print	EMP-RPT
	3	PROCEDURE DIVISION OPEN PERFORM MOVE READ Nonnumeric literals PERFORM/UNTIL CLOSE STOP Figurative constants WRITE ADVANCING integer	Read-and-print (continued)	EMP-RPT
	4	PICTURE BLANK WHEN ZERO MOVE Numeric literals JUSTIFIED RIGHT Data-name qualification		
Record and report design	5	ADD SUBTRACT MULTIPLY DIVIDE COMPUTE ROUNDED ON SIZE ERROR	Read-calculate-and-print Read-calculate-and-print with totals	CHGACCT TCHGACCT
	6	GO TO PERFORM/THRU		LABELS
	7	REDEFINES VALUE ACCEPT/FROM DATE ACCEPT/FROM DAY ACCEPT/FROM TIME READ/INTO ADVANCING identifier ADVANCING PAGE WRITE/FROM	Read-calculate-and-print with headings and totals	PAYROLL

Figure P.1. Text progression and integration.

The programs presented here also serve as a ready reference for each application type, and they introduce students to the fact that several traditional application-program categories exist. This permits students to analyze programming tasks in relation to program type and to use common approaches rather than to “reinvent the wheel” for each program. Further, with this method of presentation, coding is never divorced from practical application. The specific integration of concepts, coding, and program models is presented in Figure P.1.

<i>Systems concept</i>	<i>Chapter</i>	<i>COBOL coding syntax</i>	<i>Program type</i>	<i>Program name</i>
	8	IF		
Data validation	9	INSPECT BLOCK CONTAINS	Data validation	DATA-VAL
Sorting and control breaks	10	USAGE	Control break (single-level)	S-CTLBRK
			Control break (multiple-level)	M-CTLBRK
	11	SORT RELEASE RETURN MERGE	Sort	SRT-ONLY SRT-PRE SRT-P-P SRT-POST
Table handling	12	OCCURS Subscripts INDEXED BY SET PERFORM/VARYING SEARCH KEY	Table processing	
Multiple-level table handling	13	SEARCH/VARYING PERFORM/VARYING/AFTER	Table loading	STOCK-ST

Figure P.1. (continued)

**System Concepts
Chapters**

Five chapters (labeled A, B, C, D, and E) are included to teach business systems concepts along with the coding. They contain no coverage of the COBOL language per se but instead discuss background information on data concepts, record and report design, data validation, sorting and control breaks, and table handling.

ANS COBOL Orientation

This text is designed for users of American National Standard COBOL—either the 1968, 1974, or soon-to-be-adopted 198X version. Even though it has not yet been formally approved by the American National Standards Organization at the time that this is being written, the 198X standards have already been implemented in the COBOL compilers offered by a number of major vendors.

Although the text is not oriented toward a specific hardware or compiler vendor, commonly encountered IBM extensions to ANS COBOL are identified and covered.

To simplify identification of the respective ANSI standards in the text, the 1974 American National Standard COBOL is referred to as COBOL-74; the soon-to-be-adopted standard is called COBOL-8X.

**Programming Style
Conventions**

Over the years, through trial and error, COBOL installations and programmers have developed programming style conventions. The establishment and use of such conventions significantly aid program readability and maintainability. In this text, therefore, applicable style considerations are presented along with the syntactical coding rules to provide an introduction to proper coding form. Through presentation of these style conventions, students can quickly learn sound coding practices that might otherwise take years to acquire.

**Comprehensive Program
Design Documentation**

For each text program, a structure chart is presented and the detailed logic is shown in both pseudocode and program flowchart form. (The abbreviated sort programs presented in Chapter 11 omit the detailed logic diagrams, however.)

Structure charts are provided to show overall program organization and module definition. A relaxed, English-like pseudocode is used to make comprehension of the detailed logic easier for the beginning programming student. Since many students are familiar with and feel comfortable with flowcharts, the logic is also shown in program flowchart form.

**Clearly Identified Coding
Formats and Examples**

Whenever COBOL language entries are introduced in the text, they are accompanied by the language format (sometimes shown in a simplified form). The language formats are presented in a shaded box for easy identification.

When an example is first shown, it is hand lettered on a coding sheet grid so that students can easily visualize how the entry will look in relation to the COBOL coding line. (A convention used in the coding examples is that when there is a stand-alone example—that is, when the coding example does not apply to a program presented in the text—a data-name is prefixed by XX-, IN-, or OUT-; a procedure-name is prefixed by 999-.)

Complete Programs

Thirteen complete programs—one for each of the major application program types mentioned above—are included. They are shown in a reduced typesize so that they will fit on a single page or on facing pages. This format gives readers a view of the program as a whole without the need to flip pages. As a result, students can more easily grasp the coding interrelationships and thereby more quickly comprehend the program logic.

Portions of the programs are often extracted and discussed in more detail within the body of the text.

Combination Tutorial/Reference Approach	Students often react to COBOL textbooks in one of two ways. Typically, either they feel that the text is a good reference manual but doesn't really explain how to write certain types of programs, or they claim that the book explains things well but is difficult to use as a reference. This text blends tutorial and reference features. Whenever a subject is presented, it is fully covered in one place. However, to guard against information overload, topics are covered on a step-by-step basis and are integrated with programming examples.
Extensive End-of-Chapter Material	At the end of each chapter, a chapter summary is presented. Appropriate chapters also contain COBOL language element summaries and style summaries. Exercises appear after the summaries. Terms for definition and review questions are provided for each chapter. Some chapters also contain syntax/debug exercises.
Range of Programming Assignments	At the conclusion of most chapters, there are four programming assignments that relate directly to the material covered within the chapter. The assignments are arranged in order of increasing complexity. The first is the easiest and quickest to code; the fourth is the most difficult. Complete test data-sets are available for use with the programming assignments. (An order blank is located in the Instructor's Guide.)
Numerous Illustrations and Examples	Over 500 figures illuminate the text. The figures include illustrations, diagrams, programming specifications, design documentation, and coding examples.
Comprehensive Instructor's Guide	A comprehensive Instructor's Guide is available for instructors using this text. Together with a number of other aids, the Guide contains the following: (1) chapter objectives, (2) teaching tips, (3) answers to exercises, (4) test questions, and (5) order blanks for other supplemental materials.
Quick-Reference Material on Inside Covers	A mock-up of the IDENTIFICATION and ENVIRONMENT divisions is presented on the inside front cover together with a checklist of other items that vary with the compiler and computer system being used. This page can be filled in at the beginning of the course and then used as (1) a reminder of the format for coding the first two COBOL divisions and (2) a reference whenever installation-dependent entries must be coded. For easy reference, the COBOL reserved word list and the format notation legend appear on the inside back cover.
Expanded and Updated Material	In preparing this revision, I have reconsidered every sentence and figure of the original text in an effort to present the material in as clear and understandable a manner as possible. Similarly, each topic was reassessed for relevance, and additional topic area candidates were considered. Areas in which significant new material appears are discussed below.
COBOL-8X Differences	At the end of each chapter, applicable ANS-8X differences are presented within a shaded block. This facilitates (1) an integrated approach for those who are using an 8X-compiler or who otherwise wish to teach the new standards and (2) visual separation of the material for those using a 74-compiler.
Expanded Table-Processing Coverage	The table-processing material (Chapter 12 in the first edition) has been separated into two chapters (Chapters 12 and 13) in this edition. Chapter 13 contains expanded material on multiple-level tables.

The Report Writer Feature	Although the COBOL Report Writer feature is not available for all compilers, a number of instructors have requested coverage of the subject. A module on Report Writer is thus included as Appendix A.
COBOL Programming Perspectives	<p>Certain nonstandard COBOL coding practices and considerations have evolved over the years. For the second edition I have devised capsule discussions—named “COBOL Programming Perspectives”—to explain not only <i>what</i> but <i>why</i> such special conventions are sometimes practiced within a data-processing installation. Topics covered include the following:</p> <ul style="list-style-type: none"> ■ Initial-character printer forms control ■ Quotation mark delimiters for nonnumeric literals ■ Decimal-point handling in commercial data-processing systems ■ Arithmetic-sign representation ■ COMPUTE statement intermediate results ■ System date handling ■ Printer page-skipping considerations ■ ADVANCING phrase mnemonic-name option ■ Effect of arithmetic signs upon class tests ■ Record-blocking considerations ■ COBOL sorts versus stand-alone sorts ■ Choice of table-lookup driver ■ Subscripts versus indexes
New Programming Assignments	<p>Forty new programming assignments are provided. As in the first edition, the assignments for each chapter offer a range of complexity. Each assignment is fully documented so that it contains explicit instructions for the student.</p> <p>In the early chapters (before Chapter 6), record layouts are presented in tabular form to provide the student with experience in constructing record layout forms, preparing print charts, and specifying PICTURE character-strings. In the later chapters (after Chapter 6), record layout diagrams and print charts are provided in the assignments.</p>
System-Names for Selected Compilers	Syntax for COBOL system-names varies from one compiler to another. To provide helpful additional reference material, implementor-dependent system-names are presented in Appendix C.
Expanded Supplemental Material for Instructors	In addition to the Instructor’s Guide, supplemental materials, including worked solutions and test data for the programming assignments, are being developed. Adopters of the textbook will be notified when they are available.
Enhancements to the Text	Certain enhancements have been made to the text presentation. I believe that they, together with the other new material, have resulted in a book that is easier to use—for both instructors and students.
Chapter/Topic Organization	Each numbered chapter contains a preliminary overview discussion, following which the chapter material is organized into topics. Such topic organization clearly identifies the subject of each text segment. This permits easy identification of material that the instructor might choose to skip or cover in a different sequence.
Clearer Format	A number of design and typographical improvements have been made in the new edition. For example, topic outlines are listed at the beginning of each topic, and key terms appear in bold type.

Quick Index	On the inside front cover, a quick index to important COBOL syntax and language elements is provided.
Career Profiles	Brief career profiles of computer software professionals are presented on the opening pages of the systems chapters. Each profile describes the job responsibilities of a representative position related to COBOL programming. These vignettes add a touch of interest and enlightenment about contemporary job duties in the information-systems field.
Expanded End-of-Chapter Material	Exercises have been added to the systems chapters. Additional summary and exercise material has also been inserted in most of the numbered chapters.

Acknowledgements My sincere thanks and appreciation go to the following people who have provided assistance in the preparation of this book:

CONTENTS

Preface

xiii

CHAPTER 1 OVERVIEW OF A COBOL PROGRAM AND ITS DEVELOPMENT 1

- Topic 1-A: The Program Development Process 2
Phase 1: The Specification Phase, 3. Phase 2: The Design Phase, 7. Phase 3: The Coding Phase, 10. Phase 4: The Testing Phase, 17.
- Topic 1-B: COBOL Program Overview 19
The IDENTIFICATION DIVISION: Documenting the Program, 21. The ENVIRONMENT DIVISION: Defining the Computer and Input-Output Devices, 21. The DATA DIVISION: Defining Files, Records, Fields, and Subfields, 23. The PROCEDURE DIVISION: Coding the Program Logic, 25.
- Chapter 1 Summary 27
- Exercises 28
- Programming Assignment 30

SYSTEMS CHAPTER A DATA CONCEPTS 31

- Logical Classifications of Data 34
Field, 34. Logical Record, 37. File, 38.
- Physical Classifications of Data 38
Character Position, 38. Record Block, 39. Volume, 40.
- Data Base 41
- Systems Chapter A Summary 43
- Exercises 44

CHAPTER 2 WRITING A COBOL PROGRAM: IDENTIFICATION, ENVIRONMENT, AND DATA DIVISIONS 47

- Application Background 48
- COBOL Format Notation 48
- Using the Coding Form 52
- Topic 2-A: Writing the IDENTIFICATION DIVISION 53
IDENTIFICATION DIVISION Header, 53. PROGRAM-ID Paragraph, 54. AUTHOR Paragraph, 57. INSTALLATION Paragraph, 57. DATE-WRITTEN Paragraph, 57. DATE-COMPILED Paragraph, 58. SECURITY Paragraph, 59. Recap of the IDENTIFICATION DIVISION, 59. Spacing and Punctuation of COBOL Words, 60. Vertical Spacing of COBOL Coding Lines, 62.

Topic 2-B:	Writing the ENVIRONMENT DIVISION	63
	CONFIGURATION SECTION, 64. INPUT-OUTPUT SECTION, 64. Recap of the ENVIRONMENT DIVISION, 68.	
Topic 2-C:	Writing the DATA DIVISION	68
	FILE SECTION, 69. WORKING-STORAGE SECTION, 79. Recap of the DATA DIVISION, 84.	
Chapter 2 Summary		84
COBOL-8X Differences		88
Exercises		89
Programming Assignments		94

CHAPTER 3	WRITING A COBOL PROGRAM: THE PROCEDURE DIVISION	99
------------------	--	-----------

Topic 3-A:	Writing the PROCEDURE DIVISION	100
	PROCEDURE DIVISION Elements, 101. MAINLINE-PRINT-EMPLOYEE-REPORT Paragraph, 104. PROCESS-NAME-ADDRESS-RECORD Paragraph, 116.	
Topic 3-B:	Coding Considerations	120
	READ Statement Placement, 120. Common Errors of Beginning COBOL Programmers, 121.	
Chapter 3 Summary		125
COBOL-8X Differences		128
Exercises		128
Programming Assignments		130

CHAPTER 4	PICTURE CLAUSES AND THE MOVE STATEMENT	131
------------------	---	------------

Topic 4-A:	PICTURE Clauses	132
	Describing Alphanumeric Data-Items, 134. Describing Alphabetic Data-Items, 134. Describing Numeric Data-Items, 134. Describing Numeric-Edited Data-Items, 140. Describing Alphanumeric-Edited Data-Items, 150. Recap of PICTURE Clauses, 150. BLANK WHEN ZERO Clause, 152.	
Topic 4-B:	The MOVE Statement	153
	Alphanumeric MOVE Operations, 154. Numeric MOVE Operations, 155. Group Field MOVE Operations, 156. Other MOVE Statement Categories, 159. Concepts Related to MOVE Statements, 161.	
Chapter 4 Summary		165
COBOL-8X Differences		171
Exercises		172
Programming Assignments		176

SYSTEMS CHAPTER B	RECORD AND REPORT DESIGN CONCEPTS	181
--------------------------	--	------------

Record Design	182
	Logical Record Length, 182. Record Identification, 185. Field Placement, 185.
Report Design	186
	Report Areas, 186. Printer Specifications, 187. Report Design Guidelines, 188.

CHAPTER 5	ARITHMETIC STATEMENTS AND REPORT TOTALS	201
Topic 5-A:	A Program with Arithmetic Calculations 202 The Charge-Account Report Program, 202.	
Topic 5-B:	Arithmetic Statements 208 Arithmetic-Element Terminology, 209. Definition of Arithmetic Fields, 209. The ADD Statement, 209. The SUBTRACT Statement, 214. The MULTIPLY Statement, 216. The DIVIDE Statement, 220. The COMPUTE Statement, 223. The ROUNDED Phrase, 225. The ON SIZE ERROR Phrase, 225. Choosing the Arithmetic Statement to Use, 226.	
Topic 5-C:	Report Totals 229 Programming-Specification Documentation Modifications, 230. Design Documentation Modifications, 231. Program-Coding Modifications, 232. Implicit Redefinition, 237. Double-Buffering, 237.	
	Chapter 5 Summary 239	
	COBOL-8X Differences 241	
	Exercises 241	
	Programming Assignments 244	

CHAPTER 6	STRUCTURED PROGRAMMING	251
Topic 6-A:	The Development of Structured Programming 252 The Theoretical Basis for Structured Programming, 255. Harmful Effects of the GO TO Statement, 255. A Commercial Application of Structured Programming Theory, 257. What "Structured Programming" Means Today, 257.	
Topic 6-B:	Structured Design and Documentation Techniques 258 System and Overall Program Structure Techniques, 258. Detailed Program-Processing Techniques, 262. Recap of Program Design and Documentation Techniques, 269.	
Topic 6-C:	Structured COBOL Coding Principles and Conventions 271 Structured COBOL Coding Principles, 271. Structured COBOL Coding Conventions, 272.	
Topic 6-D:	Organization Considerations 278 Programmer-Oriented Considerations, 278, End-User Considerations, 280.	
	Chapter 6 Summary 281	
	COBOL-8X Differences 283	
	Exercises 284	

CHAPTER 7	REPORT PROGRAM DESIGN AND CODING	287
Topic 7-A:	Designing a Report Program 288 Programming Specifications for the Payroll Report Program, 288. Designing the Structure Chart, 290. Writing the Pseudocode and Drawing the Program Flowchart, 294.	
Topic 7-B:	Coding a Report Program 298 The REDEFINES Clause, 299. The VALUE Clause, 301. Coding the IDENTIFICATION and ENVIRONMENT Divisions, 302. Coding the DATA DIVISION, 303. Coding the PROCEDURE DIVISION, 313. Questions You May Have About the PAYROLL Program Coding, 320.	

Chapter 7 Summary	323
COBOL-8X Differences	328
Exercises	328
Programming Assignments	331

CHAPTER 8	THE IF STATEMENT	335
------------------	-------------------------	------------

Topic 8-A:	Simple IF Statements	336
	Simple IF Statement Forms, 336. IF Statement Conditions, 340.	
Topic 8-B:	Combined IF Statements	349
	The AND Logical Operator, 349. The OR Logical Operator, 350. Complex Conditions, 350. Implied Subjects and Relation Operators, 353.	
Topic 8-C:	Nested IF Statements, 353. Nonlinear Nested IF Statements, 354. Recap of Nested IF Statements, 355.	
Chapter 8 Summary	356	
COBOL-8X Differences	358	
Exercises	360	
Programming Assignments	362	

SYSTEMS CHAPTER C	DATA VALIDATION CONCEPTS	367
--------------------------	---------------------------------	------------

Character Testing	368
	Class Test, 368. Sign Test, 369.
Field Checking	370
	Presence Check, 370. Absence Check, 370. Range Check, 370. Limit Check, 371. Reasonableness Check, 371. Consistency Check, 371. Justification Check, 372. Embedded-Blank Check, 372. Date Check, 372. Self-Checking Numbers, 374. Name-Correspondence Check, 378. Code-Existence Check, 378.
Record Checking	378
	Record Sequence Checks, 378. Record-Set Relationship Checks, 379. Validation Design Considerations, 380.

------------------	--	------------

Topic 9-A:	The INSPECT Statement	387
	The INSPECT/REPLACING Statement, 387. The INSPECT/TALLYING Statement, 389.	
Topic 9-B:	Designing a Data Validation Program	390
	Programming Specifications for the Sales-Transaction Validation Program, 390. Design Documentation for the Sales-Transaction Validation Program, 393.	
Topic 9-C:	Coding a Data Validation Program	401
	ENVIRONMENT DIVISION Coding, 404. DATA DIVISION Coding, 404. PROCEDURE DIVISION Coding, 408. Alternative Coding Techniques, 419.	
Chapter 9 Summary	422	

COBOL-8X Differences	423
Exercises	423
Programming Assignments	424

SYSTEMS CHAPTER D	SORTING AND CONTROL-BREAK CONCEPTS	433
--------------------------	---	------------

Sorting Concepts	434
The Sort Key, 434. Merging, 435.	
Report Control-Break Concepts	437
Single-Level Control-Break Reports, 437. Multiple-Level Control-Break Reports, 438.	
Systems Chapter D Summary	440
Exercises	440

CHAPTER 10	DESIGNING AND WRITING A CONTROL-BREAK PROGRAM	441
-------------------	--	------------

Topic 10-A: A Single-Level Control-Break Program	442
Programming Specifications, 442. Program Design, 445. Program Coding, 447.	
Topic 10-B: The USAGE Clause	459
DISPLAY Usage, 460. COMPUTATIONAL Usage, 460. COMPUTATIONAL-3 Usage, 461. Choosing the USAGE for a Field, 461. Choosing Field Lengths for COMP-3 and COMP Fields, 463.	
Topic 10-C: A Multiple-Level Control-Break Program	464
Programming Specifications, 464. Program Design, 465. Program Coding, 473.	
Chapter 10 Summary	489
COBOL-8X Differences	491
Exercises	491
Programming Assignments	492

CHAPTER 11	SORTING AND MERGING	499
-------------------	----------------------------	------------

Topic 11-A: A Sort-Only Program	502
ENVIRONMENT DIVISION Coding, 504. DATA DIVISION Coding, 504. PROCEDURE DIVISION Coding, 506. Recap of Sort-Only Programs, 509.	
Topic 11-B: A Sort Program with Preprocessing of the Input File	509
DATA DIVISION Coding, 510. PROCEDURE DIVISION Coding, 511.	
Topic 11-C: A Sort Program with Preprocessing of the Input File and Postprocessing of the Sorted File	516
ENVIRONMENT DIVISION Coding, 516. DATA DIVISION Coding, 516. PROCEDURE DIVISION Coding, 517.	
Topic 11-D: A Sort Program with Postprocessing of the Sorted File	521
The SRT-POST Program, 523.	
Topic 11-E: The MERGE Statement	526
MERGE Statement Deficiency, 528. Merging with the SORT Statement, 528.	
Chapter 11 Summary	528

COBOL-8X Differences	532
Exercises	533
Programming Assignments	534

SYSTEMS CHAPTER E TABLE-HANDLING CONCEPTS

539

Table-Organization Methods	541
Random Organization, 541. Sequential Organization, 542. Usage-Frequency Organization, 542. Positional Organization, 542.	
Table-Lookup Methods	542
Serial Search, 542. Binary Search, 545. Positional Addressing, 546.	
Multiple-Level Tables	548
Table Data Storage	548
Systems Chapter E Summary	550
Exercises	550

CHAPTER 12 TABLE PROCESSING

553

Topic 12-A: Establishing and Accessing a Positionally Organized Table	554
Establishing the Table, 554. Accessing the Table, 557. Other Table-Establishment Considerations, 561.	
Topic 12-B: Table Lookups	562
Establishing a Table with Arguments and Functions, 562. Serial Lookups, 563. Serial Lookups with Early Exit, 575. Binary Search Lookups, 577.	
Chapter 12 Summary	580
COBOL-8X Differences	583
Exercises	583
Programming Assignments	584

CHAPTER 13 ADDITIONAL TABLE-PROCESSING TECHNIQUES

591

Topic 13-A: Other Single-Level Table Lookup-Considerations	592
Tables with Range-Step Arguments, 592. Separately Defined Table Arguments and Functions, 593.	
Topic 13-B: Multiple-Level Tables	598
Two-Level Table Processing, 598. Three-Level Table Processing, 603. The PERFORM/VARYING/AFTER Statement, 606.	
Topic 13-C: Loading Tables from Input Records	611
Input-Loaded Tables, 611. Program Example, 613.	
Chapter 13 Summary	621
COBOL-8X Differences	622
Exercises	622
Programming Assignments	623
