PREFACE

The scope of the Intersociety Energy Conversion Engineering Conference (IECEC) series has grown from a straightforward treatment of energy conversion engineering to a broad involvement in all aspects of energy systems, including primary resource processing, utilization and environmental issues in addition to conversion and storage. The other notable trend has been toward increased international participation and, as the papers in this volume attest, IECEC-89 can truly claim to be an international forum on energy engineering with a significant proportion of the papers being presented being from beyond the confines of the United States. It is a particular pleasure to include, for the first time, a sizeable contribution from the USSR.

These developments are indeed appropriate for energy conversion engineering has to be undertaken within the broader context of energy systems and energy issues which are not constrained by national boundaries. The increasing and proper concern for the impact of energy systems not only locally but also globally is particularly reflected in the nearly 500 papers appearing in a Proceedings which has now grown to six volumes. In these, the reader will find a comprehensive coverage of recent work on energy systems and technologies relevant to the expected conditions of the 1990's and beyond. The international character of IECEC-89 shows not just through participation from many countries but the large measure of common ground evident in the contributions made by the many national and international organizations involved in the energy engineering field.

The organization of this large amount of interrelated material poses considerable challenges which have been met in the first instance by dividing the Conference and, by extension, the Proceedings, into a number of major topical areas. From a narrow applications viewpoint, it is tempting to view aerospace and terrestrial energy system issues separately since they generally involve meeting different criteria. This has not been done in the present Conference in large measure because an IECEC objective is to find and emphasize points of commonality. Accordingly, a blend of interests will be found throughout, as for example, in Volume 2 devoted to energy conversion technologies where space and terrestrial photovoltaics are grouped together.

To facilitate use of the volumes, the Table of Contents is repeated in each Volume and an author Index appears in Volume 6. In addition, the now well-established feature of IECEC, the SAE cumulative index for the past four years is also included in Volume 6. This may be used to locate recent related work reported at the IECEC and, in due course, it will be updated to include the current Conference.

The task of preparing these Proceedings has only been possible through the unstinting efforts of the Program Committee, Session Organizers and the IECEC-89 staff whose many contributions are gratefully acknowledged by the Editors. In fairness to other technologies in which the Institute of Electrical and Electronics Engineers is prominently involved, the critical role of computers, FAX machines and other aspects of modern communications technology in permitting the assembly of this body of material also deserves recognition.

William D. Jackson, *Editor*
Dorothy A. Hull, *Associate Editor*

24th Intersociety Energy Conversion Engineering Conference

Gateway Marriott Hotel, Arlington, VA

CONFERENCE MANAGER

Christine H. Auldridge Tel: (202) 686-9141
P.O. Box 15128 FAX: (202) 686-7179
Chevy Chase, MD 20815 Telex: 3794132HMJ

GENERAL COMMITTEE

General Chairman	A. D. Schoenfeld
Assistant General Chairman	W. U. Borger
Program Chairman	W. D. Jackson
IEEE NCAC Liaison	M. Roderick
Local Arrangements	R. L. Wiley
Associate Proceedings Editor	D. Hull

1988-89 IECEC STEERING COMMITTEE

Institute of Electrical and Electronics Engineers (IEEE)
W. D. Jackson, HMJ Corporation, Chevy Chase, MD
A. D. Schoenfeld, Hughes Space and Communications Group, Los Angeles, CA

American Institute of Chemical Engineers (AIChE)
E. J. Cairns, Lawrence Berkeley Laboratory, Berkeley, CA
P. A. Nelson, Argonne National Laboratory, Argonne, IL

American Nuclear Society (ANS)
P. G. Bailey, Lockheed Missiles & Space Co., Sunnyvale, CA
D. L. Black, Westinghouse Electric Corp., Washington, DC

Society of Automotive Engineers (SAE)
T. J. Bland, Sunstrand Corporation, Rockford, IL
B. L. McFadden, Wright Patterson Air Force Base, OH

American Chemical Society (ACS)
H. Arastoopour, Illinois Institute of Technology, Chicago, IL
J. E. Mitchell, ARCO Oil & Gas Co., Plano, TX

American Institute of Aeronautics and Astronautics (AIAA)
A. W. Adam, Sunstrand ATG, Rockford, IL
R. Barthelemy, Wright Patterson Air Force Base, OH

American Society of Mechanical Engineers
O. A. Arnes, California State University, Sacramento, CA
Y. D. Goswami, NC A&T State University, Greensboro, NC

COOPERATING SOCIETIES

American Power Conference (APC)
E. S. Pierson, Purdue University Calumet, Hammond, IN

Electro-Chemical Society (ECS)
F. R. McLarnon, Lawrence Berkeley Laboratory, Berkeley, CA

International Solar Energy Society (ISES)
Gershon Meckler, Gershon Meckler Associates, New York, NY

Japan Society of Mechanical Engineers (JSME)
N. Isehiki, Tokyo, Japan

PROGRAM COMMITTEE

Chair: W. D. Jackson, HMJ Corporation, Chevy Chase, MD

Assistant Chairs: E. S. Pierson, Purdue University Calumet
R. J. Sovie, NASA Lewis Research Center

SOCIETY REPRESENTATIVES

American Institute of Chemical Engineers	P. A. Nelson
American Nuclear Society	D. W. Black
Society of Automotive Engineers	T. J. Bland
American Chemical Society	J. Mitchell
American Institute of Aeronautics and Astronautics	A. W. Adam
American Society of Mechanical Engineers	Y. D. Goswami

TOPICAL ORGANIZERS

J. P. Abbin, Sandia National Laboratory, Albuquerque, NM
A. W. Adam, Sundstrand Corporation, Rockford, IL
C. P. Bankston, Jet Propulsion Laboratory, Pasadena, CA
J. R. Barton, Boeing Aerospace, Seattle, WA
E. J. Cairns, Lawrence Berkeley Laboratory, Berkeley, CA
J. E. Chen, Lockheed Missiles & Space Co., Sunnyvale, CA
D. J. Flood, NASA Lewis Research Center, Cleveland, OH
S. J. Gaston, GE-RCA Aerospace Division, Princeton, NJ
R. J. Hemler, GE Aerospace Division, Philadelphia, PA
F. Hrach, NASA Lewis Research Center, Cleveland, OH
D. Lacey, NASA Lewis Research Center,
L. F. Lollar, Marshall Space Flight Center, Huntsville, AL
T. Mahefky, Wright Patterson AFB, OH
C. R. Martin, US Department of Energy, Washington DC
H. D. Moran, Solar Energy Research Institute, Golden, CO
B. A. Ross, Battelle Pacific Northwest Labs, Richland, WA
S. M. Schoenung, W.J.Schafer Associates, Pleasanton, CA
A. D. Shyner, NASA Headquarters, Washington D.C.
S. W. Silverman, Consultant, Seattle, WA
M. Swerdling, TRW Space Nuclear Power, Sepulveda, CA
L. E. VanBibber, Westinghouse Corporation, Large, PA
R. L. Wiley, Auburn University, Columbia, MD
H. Weiner, The Aerospace Corporation, Los Angeles, CA

INTERNATIONAL COORDINATORS

Australasia	H. K. Messerle, University of Sydney, Sydney, NSW, Australia
Central and South America	G. Violini, Director, CIF, Bogota, Columbia
China and Korea	Z. X. Shu, Shanghai Power Equipment Research Institute, Minghang, China
Israel	H. Branover, Ben-Gurion University of the Negev, Israel
Japan	N. Isehiki, The Japan Society of Mechanical Engineers, Tokyo, Japan
North Western Europe	L. H. Th. Rietjens, University of Technology, Eindhoven, The Netherlands
South Western Europe	S. Stecco, Universita Degli Studi de Firenze, Italy
Southeast Asia	S. Sridharan, Bharat Heavy Electricals, Ltd., Tiruchirappalli, India
USSR and Eastern Europe	A. E. Scheindlin, USSR Academy of Sciences, Moscow, USSR

VOLUME II

Conversion Technologies and Space Nuclear Reactor Systems

CONVERSION TECHNOLOGIES I ADVANCED ROTATING MACHINES

899301	Modes of Operation of the Slip Ring Induction Machine in Wind Energy Conversion Systems M.T. El Hagry, A.A. Mohamed and M.N. Iskander, <i>Electric Research Institute of Cairo, Egypt</i>	665
899302	Methodology of Asymmetrical Fault Analysis of a 6-Phase Synchronous Machine S.E. Abo-Shady, Y.A. Al-Turki and K.A. Bin-Ali, <i>Jeddah Oil Refinery, Saudi Arabia</i>	671
899426	Energy Conservation Aspect of Induction Motors Using Improved Design and Power Controllers S.S. Murthy, C.S. Jha, S.R. Lakshmi and A.K. Rai, <i>Indian Institute of Technology, New Delhi, India;</i> and D.A. Desai, <i>Kirkeskar Elec. Co.</i>	677

SPACE ENERGY CONVERSION TECHNOLOGIES V STATIC CONVERSION I: THERMOELECTROCHEMICAL SYSTEMS

899500	Advances in Design and Performance of SHE System Components J.R. McBride, R. Novak, D.J. Schmatz, W.P. Copple, J.T. Brockway, N. Arnon and G.A. Grab, <i>Ford Motor Co., Dearborn, MI;</i> T.K. Hunt, <i>Environmental Research Institute of Michigan</i>	683
899615	Novel Fabrication Technique for Improving the Figure-of-Merit of Thermoelectric Materials J.S. Beaty and R. Masters, <i>Thermoelectron Technology Corporation;</i> J.W. Vandersande and C. Wood, <i>Jet Propulsion Lab, Pasadena, CA</i>	689

SPACE ENERGY CONVERSION TECHNOLOGIES VIII STATIC CONVERSION II: THERMOELECTRICS

899292	The Preparation of SiGe Thermoelectric Materials by Mechanical Alloying B.A. Cook, B.J. Beaudry, J.L. Harringa and W.J. Barnett, <i>Ames Laboratory, Ames, IA</i>	693
899503	Multiple Doping of Silicon-Germanium Alloys for Thermoelectric Applications J.P. Fleurial, C.B. Vining and A. Borshchevsky, <i>Jet Propulsion Laboratory, Pasadena, CA</i>	701

899405	Recent Investigations of SiFe/GaP Thermoelectric Materials at TTC and GE R. Masters, <i>Thermo-Electron, Waltham, MA</i> ; and J. Nakahara, <i>General Electric Company, Philadelphia, PA</i>	706
899134	Effect of Ga and P Dopants on the Thermoelectric Properties of N-Type SiGe S.L. Draper, <i>NASA</i> ; J.W. Vandersande and C. Wood, <i>Jet Propulsion Laboratory, Pasadena, CA</i> ; and R. Masters and V. Raag, <i>Thermo Electron Technologies</i>	711

SPACE ENERGY CONVERSION TECHNOLOGIES X RTGs I

899237	RTG's for Space Exploration at the End of the Twentieth Century A. Chmielewski, <i>Jet Propulsion Laboratory, Pasadena, CA</i>	715
--------	--	-----

SPACE ENERGY CONVERSION TECHNOLOGIES XII RTGs II

899408	DIPS Power Conversion Cycle Selection A.G. Stadnik, <i>Rockwell International, Rocketdyne Division, Canoga Park, CA</i>	721
899435	Dynamic Isotope Power Subsystem (DIPS) Ground Support V. Keshishian, <i>Rockwell International, Rocketdyne Division, Canoga Park, CA</i>	727

RENEWABLE RESOURCE SYSTEMS I PHOTOVOLTAICS I

899041	Central Station Photovoltaic Plant with Energy Storage for Utility Peak Load Leveling B. Chowdhury, <i>Electrical Engineering Department, University of Wyoming, Laramie, WY</i>	731
899105	Microprocessor Control of a Hybrid Energy System W.B. Lawrance, C.V. Nayar, T.L. Pryor and S.J. Phillips, <i>Curtin University, Perth, Australia</i>	737
899104	Effect of Meteorological Conditions on the Performance of Crystalline Photovoltaic Modules S. Rahman, <i>Virginia Polytechnic Institute, Blacksburg, VA</i>	743
899463	Magnification of Starting Torques of DC Motors by Maximum Power Point Trackers in Photovoltaic Systems J. Appelbaum and S. Singer, <i>NASA Lewis, Cleveland, OH</i>	749
899559	Wave Energy Research and Technology Assessment for Coastal North Carolina G. Hagerman, <i>SEASUN Power Systems</i> ; T. Heller, <i>Virginia Power</i> ; and B. Zickefoose, <i>North Carolina Alternative Energy Corporation</i>	755

RENEWABLE RESOURCE SYSTEMS III PHOTOVOLTAICS II

899550	Outdoor Stability Performance of Thin-Film Photovoltaic Modules at SERI L. Mrig, <i>Solar Energy Research Institute, Golden, CO</i>	761
899558	Thin Film Photovoltaics K. Zweibel and H.S. Ullal, <i>Solar Energy Research Institute, Golden, CO</i>	765

SPACE ENERGY CONVERSION TECHNOLOGIES I

ADVANCED SPACE SOLAR CELLS

899225	Large Area Solar Cells for Future Space Power Systems D.R. Lillington, B.T. Cavicchi, M.S. Gillanders, G.T. Crotty and D.D. Krut, <i>Spectrolab Inc., Sylmar, CA</i>	773
899562	High Specific Power (AlGaAs) GaAs/CuInSe₂ Tandem Junction Solar Cells for Space Applications N.P. Kim, B.J. Stanbery, R.M. Burgess and R.A. Mickelsen, <i>Boeing Electronics</i> ; R.W. McClelland, B.D. King and R.P. Gale, <i>Kopin Corporation</i>	779
899416	Concepts for Thin-Film GaAs Concentrator Cells M.B. Spitzer, R.P. Gale, R. McClelland, B. King, J. Dingle and R. Morrison, <i>Kopin Corporation, Taunton, MA</i>	785
899223	Gallium Arsenide-on-Germanium Solar Cells P.A. Iles, F. Ho and M. Yeh, <i>Applied Solar Energy, City of Industry, CA</i> ; G. Datum and S. Billetts, <i>Lockheed</i>	791
899239	High Efficiency Heteroepitaxial Solar Cells for Space Power Applications S.M. Vernon, S.P. Tobin, C.J. Keavney and S.J. Wojtczuk, <i>Spire Corporation, Bedford, MA</i>	799

SPACE ENERGY CONVERSION TECHNOLOGIES II

SPACE PHOTOVOLTAIC TECHNOLOGY: CELL AND ARRAY COMPONENT PERFORMANCE

899418	Thermal Annealing of GaAs Concentrator Solar Cells H. Curtis and D. Brinker, <i>NASA Lewis, Cleveland, OH</i>	805
899534	Pilot Line Production of High-Efficiency GaAs Solar Cells K.A. Bertness, M.L. Ristow, M.S. Kuryla, H.C. Hamaker and J.G. Werthen, <i>Varian Research Center, Palo Alto, CA</i>	811
899619	High Efficiency GaAs/GaSb Tandem Solar Cells and Tandem Circuit Cards L.M. Fraas, J. Avery, J. Martin, V.S. Sundaram, G.R. Girard, V. Dinh, N. Mansori, J.W. Yerkes and B.A. Arau, <i>Boeing, Seattle, WA</i>	815
899620	Analysis of Interdigitated Back Contact Silicon Solar Cells for Space Use D.C. Marvin and S.L. Froedge, <i>The Aerospace Corporation, El Segundo, CA</i>	821

SPACE ENERGY CONVERSION TECHNOLOGIES III

ADVANCED SPACE SOLAR ARRAYS: PERFORMANCE AND REQUIREMENTS

899621	Advanced Photovoltaic Solar Array Program Status R.M. Kurland, <i>TRW SETG, Redondo Beach, CA</i> ; and P.M. Stella, <i>Jet Propulsion Laboratory, Pasadena, CA</i>	829
899533	The Mini-Dome Lens Space Concentrator Array: Recent Component Test Results and Current Array Development Status M.J. O'Neill, A.J. McDanal and J.L. Perry, <i>Entech, Inc., Dallas, TX</i> ; D.J. Flood, M.F. Piszczor and C.K. Swartz, <i>NASA Lewis, Cleveland, OH</i>	835
899436	Photovoltaic Power System Operation in the Mars Environment J. Appelbaum and D. Flood, <i>NASA Lewis, Cleveland, OH</i>	841

**SPACE ENERGY CONVERSION TECHNOLOGIES VI
ADVANCED SOLAR DYNAMIC SPACE POWER-MISSIONS,
TECHNOLOGY AND APPLICATIONS**

899603	Free Piston Space Stirling Technology Program G.R. Dochat and M. Dhar, <i>Mechanical Technology Inc., Latham, NY</i>	849
899365	Two-Tiered Design Analysis of a Radiator for a Solar Dynamic Powered Stirling Engine D.C. Hainley, <i>NASA Lewis, Cleveland, OH</i>	855

SPACE ENERGY CONVERSION TECHNOLOGIES IX

899366	A Program for Advancing the Technology of Space Concentrators G.D. Naujokas and J. Savino, <i>NASA Lewis, Cleveland, OH</i>	861
899367	Design of an Auto-Deployable Technology Demonstration Solar Concentrator A. Pintz, C. Castle, R. Reimer and G.D. Naujokas, <i>Cleveland State University, Cleveland, OH</i>	867
899364	An Advanced Concentrator for Solar Dynamic Power Systems in Space K. Beninga and R. Davenport, <i>SAIC, San Diego, CA</i>	875
899363	Conceptual Design of a Self-Deployable, High Performance Parabolic Concentrator for Advanced Solar-Dynamic Power Systems H.J. Dehne and D.R. Duffy, <i>Acruex Corporation, Mountain View, CA*</i>	881

**SPACE ENERGY CONVERSION TECHNOLOGIES XI
SPACE STATION SOLAR DYNAMIC POWER SYSTEMS—COMPONENT TECHNOLOGY**

899234	Concentration of Off-Axis Radiation by Solar Concentrators for Space Power K.S. Jeffries, <i>NASA Lewis, Cleveland, OH</i>	887
899076	Material Compatibility and Simulation Testing for the Brayton Engine Solar Receiver for the NASA Space Station Freedom Solar Dynamic Option H.J. Strumpf, R. P. Rubly and M.G. Coombs, <i>Allied Signal Space Company, Torrance, CA</i>	895
899228	A Brayton Cycle Solar Dynamic Heat Receiver for Space L.M. Sedgwick, S.D. Johnson, H.L. Nordwall and E.J. Kaufmann, <i>Boeing Aerospace, Seattle, WA</i>	905
899492	Advanced Solar Brayton Space Power Systems A. Pietsch and D.J. Brandes, <i>Allied Signal Aerospace, Tempe, AZ</i>	911
899235	Compatibility of Selected Superalloys with Molten LiF-CaF₂ Salt J.D. Cotton and L.M. Sedgwick, <i>Boeing Aerospace, Seattle, WA</i>	917
899226	Numerical Model of Solar Dynamic Radiator for Parametric Analysis J.L. Rhatigan, <i>NASA Lewis, Cleveland, OH</i>	923

SPACE ENERGY CONVERSION TECHNOLOGIES XIII

ADVANCED SOLAR DYNAMIC SPACE POWER SYSTEMS— RECEIVERS/THERMAL STORAGE

899187	The Cavity Heat Pipe Stirling Receiver for Space Solar Dynamics J.B. Kessell, <i>Sanders Assoc., Nashua, NH</i> ; and D. Lacey, <i>NASA Lewis, Cleveland, OH</i>	931
899007	Brayton Advanced Heat Receiver Development Program G. Heidenreich and R.S. Downing, <i>Sundstrand Aviation, Rockford, IL</i> ; D.E. Lacey, <i>NASA Lewis, Cleveland, OH</i>	937
899410	Thermal Performance of Specific Heat Receiver Concepts for Advanced Solar Dynamic Applications R. Crane and G. Bharadhwaj, <i>University of Florida, Gainesville, FL</i>	943
899491	Flight Experiment of Thermal Energy Storage D. Namkoong, <i>NASA Lewis, Cleveland, OH</i>	953
899324	High Temperature Fluoride Composites for Latent Thermal Storage in Advanced Space Solar Dynamic Power System Y. Takahashi, Y. Abe, R. Sakamoto, K. Tanaka and M. Kamimoto, <i>Electrotechnical Laboratory, Ibaraki, Japan</i>	959

CONVERSION TECHNOLOGIES II

MHD I—RETROFIT AND POWER TRAIN STUDIES

899497	Development of a Prototypical MHD Coal Combustor G. Listvinsky, J. Alpay, L. Hill, K. King, D. Paul, D. Vanevenhoven, K. Natesan and D.Y. Wang, <i>TRW S&TG, Redondo Beach, CA</i>	965
899498	Experimental Investigation on the Effects of the TRW Two-Stage Coal Combustor on the Performance of the AVCO Mk VI MAD Generator J. Pinsley, B. Pote and A. McClaine, <i>Avco Research Lab., Burtell, MA</i>	971
899464	Conceptual Design of the Scholtz MHD Retrofit Plant L. Van Bibber, F.E. Bernard, R.R. Holman, R. Putkovitch and D.A. Wiseman, <i>Westinghouse AESD, Pittsburg, PA</i> ; W.D. Jackson, <i>H.M.J. Corp.</i> ; G.R. Seikel, <i>SeiTec</i> ; J. Cuchens, <i>Southern Electric Integration</i> ; C.M. Maxwell, <i>STD Corp.</i> ; N. Johanson, <i>University of Tennessee</i>	979
899019	The Feasibility of MHD Retrofit in India S. Sridharan, K.V.S. Sundaram and S.K. Somasundaram, <i>Bharat Heavy Electricals, Tirichy, India</i>	985
899333	Coal-Fired MHD Topping Cycle Hardware Development and Test Progress at the Component Development and Integration Facility A. Hart, R. Glovan, I. Stepan and J.M. Richards, <i>MSE, Inc., Butte, MT</i>	991

CONVERSION TECHNOLOGIES III

MHD II—GENERATORS, HEAT RECOVERY AND SEED REPROCESSING

899086	Axial Current Conduction in Polarized Slag Layers on Coal-Fired MHD Generator Walls J. Lohrasbi and D. Lofftus, <i>MSE, Inc., Butte, MT</i>	999
899017	Theoretical Examination of the Growth and Attenuation of Acoustic and Entropy Waves in Ideal Faraday Generators M. Kulkarni, <i>Johnson Controls, Milwaukee, WI</i> ; J.P. Barton, <i>University of Nebraska</i>	1005
89960	Development of MHD Cells for the MHD Heat Bottoming Plant K. Natesan and W. Swift, <i>Argonne National Laboratory, Argonne, IL</i>	1011

899554	Evaluation of the Solid Liquid Separation Steps in the Formate Process-Based MHD Seed Reprocessing Option D. Rasnake and A. Sheth, <i>UTSI, Tullahoma, TN</i>	1019
899555	MHD Seed Recovery and Regeneration R. McIlroy, P. Probert, D. Jackson and E. Lahoda, <i>Babcock & Wilcox, Alliance, OH</i>	1025

CONVERSION TECHNOLOGIES IV MHD III ALTERNATIVE CONCEPTS

899579	Closed-Cycle Magnetoplasmdynamic (MPD) Generator with Various Cesium-Seeded Working Fluids M.E. Talaat, <i>University of Maryland, College Park, MD</i>	1033
899332	On the Feasibility of a Closed Loop MHD Generator Work with Helium Gas P.J. Karditsas, <i>University of Maryland, College Park, MD</i>	1039
899552	OMACON Liquid-Metal MHD Natural-Gas-Fired Systems E. Pierson, <i>Argonne National Laboratory, Argonne, IL</i> ; and G. Berry, <i>Purdue University, Calumet, IN</i>	1045
899400	Promising Applications of the Liquid Metal MHD Energy Conversion Technology H. Branover and A. El-Boher, <i>Ben-Gurion University, Beer Sheva, Israel</i> ; E. Greenspan and A. Barak, <i>Israel Atomic Energy Commission</i>	1051

BURST AND PULSE POWER

899326	High Energy Density Capacitors for Space Power Conditioning M.F. Rose, <i>Auburn University, Auburn, AL</i>	1059
899327	Extracting Pulse Power from Batteries H. Oman, <i>Boeing Aerospace, Seattle, WA</i>	1067
899561	Design of a Ten Megawatt Rocket Driven Disk MHD Generator A. Solbes, J. Weede, R. Hession and P. Mitchell, <i>TRW S&TG, Redondo Beach, CA</i>	1073
899126	A Novel Optoelectronic Closing and Opening Switch for Pulsed Power K.H. Schoenbach, V. Lakdawala, M.S. Mazzola and S.T. Ko, <i>Old Dominion University, Norfolk, VA</i>	1079
899574	Experimental Program for Investigation of High Power Density MHD J.T. Lineberry, H.J. Schmidt and J.N. Chapman, <i>University of Tennessee, Space Institute, Tullahoma, TN</i>	1085

SPACE ENERGY CONVERSION TECHNOLOGIES IV DYNAMIC CONVERSION

899473	A Simplified Sizing and Mass Model for Axial Flow Turbines S.L. Hudson, <i>Sandia National Laboratories, Albuquerque, NM</i>	1091
899129	A Thermodynamic Data-Base for the Design of NaK Rankine-Cycle Turbines P.C. Lu, <i>University of Nebraska, Lincoln, NB</i>	1097
899596	Space Power Demonstration Engine Linear Alternator Dynamometer Test Results M. Dhar, J. Rauch, S. Huang and R. Bolton, <i>Mechanical Tech., Inc., Latbam, NY</i>	1103

899328	High Power Density Generator Concepts for Aerospace Electric Power R.A. Hawsey, J.M. Bailey, W.J. Allington, S.V. McGrath, W.K. Sartory, C.M. Simmons, R.J. Thomas and R.W. Young, Sr., <i>Oak Ridge National Laboratory, Oak Ridge, TN</i>	1109
899475	Multi-Foil Thermal Insulation for the Dynamic Isotope Power System W.R. Determan, J. Emmons, <i>Rockwell International, Canoga Park, CA</i> ; and F.N. Huffinan, J. Dunlay, D. Wortham and G. Field, <i>Thermo Electron Technologies, Waltham, MA</i>	1115

BURST SPACE POWER

899551	Conceptual Design of a Category III Multimegawatt Space Nuclear Power System R.E. Feddersen and J.R. Coiner, <i>Grumman Space, Bethpage, NY</i>	1121
899193	Application of Cermet Fueled Reactors to Multimegawatt Space Power Systems G.B. Kruger and J. Lobach, <i>General Electric Company</i>	1125
899133	Accelerating Hypersonic Airplanes with Ground Power H. Oman, <i>Boeing Aerospace, Seattle, WA</i>	1131

CONVERSION TECHNOLOGIES V

THERMIONICS I: PHYSICS AND ADVANCED TECHNOLOGIES

899299	Experimental and Theoretical Study of the TEC Pulse Mode with Cs and N₂ Filling V.A. Zherebtsov, M.A. Lebedev, A.A. Sobolev, E.E. Antonov, Y.P. Korchevov and I.Y. Podoluk, <i>Institute of Physics & Power Engineering, Obninsk, USSR</i>	1137
899087	Theory of the Initial Stage of Low Pressure Arc Discharge with Thermionic Cathode V.I. Babanin and A.Y. Ender, <i>USSR Academy of Sciences, Leningrad, USSR</i>	1143
899305	A Phenomenological Model of the Arc Mode of a Thermionic Energy Converter V.Z. Kaibyshev, <i>USSR Institute of Atomic Energy, Moscow, USSR</i>	1149

CONVERSION TECHNOLOGIES V

THERMIONICS—COMPONENTS AND METHODS (USSR)

899294	Behavior of Carbon on Tungsten Monocrystal (110) and (112) Faces When Simulating Interaction with Thermionic Converter Interelectrode Medium V.I. Yarygin, R.V. Savvov, V.R. Agafonov, D.V. Dodnov and Z.B. Skrebova, <i>Institute of Physics, Obninsk, USSR</i>	1155
899304	Variation of Emission-Adsorption Properties in an Operating TEC Collector V.A. Koryukin, V.P. Obrezumov, V.I. Vybyvanets and I.V. Kurchatov, <i>USSR Institute of Atomic Energy, Moscow, USSR</i>	1161
899303	A New Method for Measuring Heat of Electron Evaporation from Thermionic Energy Converter Emitter Y. Dzhashiashvil, V.Z. Kaibyshev and I.R. Kurchatov, <i>USSR Institute of Atomic Energy, Moscow, USSR</i>	1165

CONVERSION TECHNOLOGIES VII

THERMIONICS PERFORMANCE TESTING

899196	Design and Testing of a Heat Pipe Cooled Thermionic Energy Converter W.B. Veltkamp, L.R. Wolff, J.M.W.M. Schoonen, R. Bakker, M.P.A. Houtermans, A.M. dePijper, <i>Eindhoven University, Eindhoven, The Netherlands</i>	1171
899567	Thermionic Fuel Element Verification Program: Summary of Results S. Samuelson, <i>Department of Energy, Washington, DC</i> ; R.C. Dahlberg, <i>General Atomics, San Diego, CA</i>	1177
899625	Advanced Research Directions In Thermionic Energy Conversion E.B. Kennel, <i>Wright Research and Development Center, WPAFB, OH</i> ; L.H. Caveny, <i>Strategic Defense Initiative Organization, Washington, DC</i>	1183

SPACE NUCLEAR REACTOR SYSTEMS I

SPACE REACTOR APPLICATIONS

899009	A Look at the Soviet Space Nuclear Power Program G.L. Bennett, <i>NASA Headquarters, Washington, DC</i>	1187
899494	CSTI High Capacity Power J.M. Winter, <i>NASA Lewis, Cleveland, OH</i>	1195
899423	A Conceptual Study of the Use of a Particle Bed Reactor Nuclear Propulsion Module for the Orbital Maneuvering Vehicle J. Malloy and D. Potekhen, <i>Babcock & Wilcox, Lynchburg, VA</i>	1209

SPACE NUCLEAR REACTOR SYSTEMS II

SP100 TECHNOLOGY

ABSTRACT

The aim of this paper is to thoroughly investigate two modes of operation of the slip ring induction machine, namely the Double Output Induction Generator (DOIG) and the Double Excited Induction Generator when used in Wind Energy Conversion Systems (WECS). A comparison between the output power, power factor, efficiency, system displacement angle, and firing angle is done. A scheme of operation combining both modes for optimum operation is proposed.

INTRODUCTION

In this research the steady state performance of the slip ring induction machine running at super synchronous speed in wind energy conversion systems (WECS) is investigated. Two modes of operation, namely, the double output induction generator (DOIG) and the double excited induction generator (DEIG) have been evaluated for comparison purposes and for the deduction of the optimum implementation of the slip ring induction machine as a generator in WECS. These modes of operation are characterized by the variable speed constant frequency (VSCF) property for wind energy conversion which is superior to

the constant speed, constant frequency (CSCF)

systems from the point of view of the collection of electric energy from the available wind power [1,2]

In both modes, namely, the DOIG and the DEIG, the stator is connected to the a.c. grid, while the rotor is connected to the grid via two controllable bridges (BRG1 and BRG2) separated by a d.c. link. BRG1 is connected to the rotor terminals and BRG2 is connected to the grid as shown in Fig.1. When the first mode of operation, DOIG, is conducted, BRG1 is operated as a full wave rectifier at zero firing angle, while BRG2 is operated as an inverter at the grid frequency varying its firing angle in an optimal manner. When the second mode of operation (DEIG) is conducted, bridge BRG1 is operated as an inverter at slip frequency, while BRG2 is operated as a controllable rectifier.

A central control unit is designed to generate the timing pulses for the two bridges according to the mode of operation required at each speed.

For the purpose of comparison, the induction machine is operated in the two proposed modes under the same operating conditions, namely:

1. constant stator voltage
2. constant stator current, and same range of rotor speeds

The steady state characteristics deduced includes

the active power generated, the reactive power consumed, the system efficiency, and the mode of variation of the firing angles. From these characteristics a control strategy is proposed to optimize the performance of the generator according to the system requirements.

Fig. 1.

The Double Output Induction Generator (DOIG)

In this mode, BRG1 is operated as a full wave rectifier at zero firing angle, while BRG2 is operated as an inverter with variable firing angle. The inverter firing angle α_i is varied so as to keep the stator current constant and equal to its rated value to allow more than the induction machine rated power to be delivered to the supply without overheating the machine. Varying α_i is represented by an additional variable resistance R_x inserted in the rotor circuit [3]. Thus the equivalent circuit is as shown in Fig. (2). The equivalent circuit impedance is

$$Z_{eq} = R_{eq} + j X_{eq} \quad (1)$$

$$= |V_s| / |I_s| \quad (2)$$

Since the stator voltage and current are constant, R_x could be obtained at each slip by solving eq. (2).

To derive the relation between R_x and α_i assuming lossless rectifier and inverter, the following relations hold:

The average output rectifier voltage is

$$V_{rec} = 3\sqrt{6} V_v / \pi \quad (3)$$

where

$$V_v = I_r R_x / S \quad (4)$$

$$I_r = V_{ag} / \sqrt{R_2^2 + X_r^2} \quad (5)$$

$$R_2 = (R_r + R_x) / S \quad (6)$$

The average input voltage of the inverter is

$$V_{inv} = 3\sqrt{6} V_s \cos \alpha_i / \pi \quad (7)$$

Neglecting losses in the d.c. link,

$$V_{rec} = -V_{inv} \quad (8)$$

From equations 4 to 8

$$\alpha_i = \cos^{-1} (I_r R_x / S V_s) \quad (9)$$

Fig. (3) shows variation of R_x and α_i with S

Fig. 2. Equivalent circuit of DOIG

The inverter active and reactive powers are

$$P_{inv} = 3V_s I_r \cos \alpha_i \quad (10)$$

$$Q_{inv} = 3V_s I_r \sin \alpha_i \quad (11)$$

The stator active and reactive powers are

$$P_s = 3V_s I_s \cos \theta_s \quad (12)$$

$$Q_s = 3V_s I_s \sin \theta_s \quad (13)$$

Thus the total active and reactive powers of the DOIG are

$$P_t = P_{inv} + P_s \quad (14)$$

$$Q_t = Q_{inv} + Q_s \quad (15)$$

A parameter "C", defined as "system displacement coefficient" is calculated and given by:

Fig.3. Variation of R_v and α_i with slip

Fig.4. Variation of P_t/P_{rat} with δ at different slips

$$\epsilon = P_t / Q_t \quad (16)$$

The mechanical power input is

$$P_m = 3(1-S) I_r^2 R_2 \quad (17)$$

Neglecting friction and windage losses, the system efficiency is given by:

$$\eta = P_t / P_m \quad (18)$$

The Double Excited Induction Generator (DEIG)

In the DEIG mode of operation BRG1 is operated as an inverter with firing angle α_i , and BRG2 is operated as rectifier with firing angle α_r . Thus a voltage at slip frequency is injected to the rotor circuit, whose magnitude V_r and phase angle δ are changed by varying α_r and α_i respectively. To get value of δ which gives maximum value of P_t/P_{rat} , the terminal voltage machine equations in the d-q axes rotating at the synchronous speed ω_s are solved in the steady state for different values of slip S .

These equations are given by [4] :

$$\begin{bmatrix} V_{ds} \\ V_{qs} \\ V_{dr} \\ V_{qr} \end{bmatrix} = \begin{bmatrix} R_s + L_s p & -\omega_s L_s & M_o p & -M_o \omega_s \\ \omega_s L_s & R_s + L_s p & \omega_s M_o & M_o p \\ M_o p & -\omega_s M_o & R_r + L_r p & -\omega_s L_r \\ \omega_s M_o & M_o p & \omega_s L_r & R_r + L_r p \end{bmatrix} \begin{bmatrix} I_{ds} \\ I_{qs} \\ I_{dr} \\ I_{qr} \end{bmatrix} \quad (19)$$

$$\text{where } V_{ds} = V_{sm}, \quad V_{qs} = 0$$

$$V_{dr} = V_{rm} \cos \delta$$

$$V_{qr} = -V_{rm} \sin \delta$$

The total active and reactive power are

$$P_t = V_{ds} I_{ds} + V_{dr} I_{dr} + V_{qs} I_{qs} + V_{qr} I_{qr} \quad (20)$$

$$Q_t = V_{ds} I_{qs} + V_{qs} I_{ds} + V_{dr} I_{qr} + V_{qr} I_{dr} \quad (21)$$

The generated active power as a ratio of the machine rated power is plotted as function of δ at different slips and constant V_r in Fig.4, where

$$V_r = (V_{dr}^2 + V_{qr}^2)^{1/2}$$

Fig.(4) shows the plotting of P_t/P_{rat} against δ for different values of S . It is noticed that for $S = -0.9$ the ratio P ($P = P_t/P_{rat}$) reaches 1.8, i.e. the generated active power is higher than the
