BUSINESS FORECASTING

To Eva, Ronnie,
and Clara
and
To Maryann,
John, Vincent,
and Alice

The second edition of *Business Forecasting* builds upon the success of the first edition. While a number of significant changes have been made in the second edition, it remains a book about forecasting methods for practitioners and for students who may one day be practitioners. Our emphasis is on those forecasting methods that practitioners have actually found useful. *Business Forecasting* is written for students and others who want to know how it's really done.

The second edition of the text includes the following new features that we are confident will enhance the process of learning how to forecast:

- Nine sidebars, which have been contributed by forecasting practitioners. These provide a very practical perspective from the “real world” to help students appreciate the relevance of the concepts presented in the text.
- Enhanced emphasis on visual inspection of data. Evaluation of data for trend, seasonal, and cyclical components is introduced in Chapter 2 and is related to the process of model selection.
- A database containing 101 variables from the widely used CITIBASE database. The variables included are listed in the Appendix to Chapter 2 and can be accessed directly using the SORITEC Sampler software packaged with the text.
- A new chapter that describes the emerging technique known as *bootstrapping*.
- Expanded discussion of measures of forecast accuracy in Chapter 1.
- A text appendix that contains a “User’s Guide to BEA Information.” The Bureau of Economic Analysis (BEA) publishes a wide variety of data that are useful to business forecasters. This appendix will help readers learn to access these data.

Today, most business planning routinely begins with a sales forecast. Whether you are an accountant, a marketer, or a financial analyst, you will have to forecast something sooner or later. This book is designed to lead you through the most helpful techniques to use in any forecasting effort. The examples we offer are, for the most

part, actual historical data much like the data you may encounter in your own forecasts. The techniques themselves are explained as procedures that you may replicate with your own data.

Because most forecasting methods are now computer-assisted, we have chosen to “key” the text to SORITEC, a powerful statistics software package capable of performing the techniques described. SORITEC is used by many firms and government agencies to prepare forecasts for clients and for internal use. Among financial institutions using SORITEC are the World Bank, Chase Manhattan Bank, and Citibank. In government, the Central Intelligence Agency, the Federal Aviation Administration, the National Bureau of Economic Research, and the Joint Economic Committee all use SORITEC. Private firms using SORITEC include E. I. du Pont, General Motors, Hallmark Cards, and Intelsat. A more representative list of users of the SORITEC software can be found following this preface.

Those who use *Business Forecasting* receive a free copy of the SORITEC Sampler packaged with the text. This package is a special version of SORITEC’s commercial package, modified for use with this text. It includes the data sets that appear in the book, as well as representative command files used to produce the examples in the text. This special version of SORITEC is a powerful package that can actually be used for real-world forecasting; the Sampler does not, however, include the powerful scripting and report-generation facilities of the full SORITEC package.

The authors would like to thank the students at the University of Notre Dame and Central Michigan University for their help in working with materials included in this book. Their comments were invaluable in preparing clear expositions and meaningful examples for this second edition. The final product owes a great debt to the inspiration and comments of our colleagues, Professor Edward Trubac of the University of Notre Dame and Professor Thomas Bundt of the University of Portland.

The authors are also especially grateful to the following reviewers and adopters of the first edition who have criticized, challenged, encouraged, and complimented our efforts. We hope they will all be pleased with the final results. We appreciate the thoughtful input.

Adding Another Causal Variable to Eliminate Serial Correlation	228
The Cochrane-Orcutt Solution to Serial Correlation	230
Alternative-Variable Selection Criteria	231
Accounting for Seasonality in a Multiple-Regression Model	232
Extensions of the Multiple-Regression Model	238
Advice on Using Multiple Regression in Forecasting	240
Forecasting Retail Car Sales with Multiple Regression	242
Using SORITEC for Multiple Regression	247

6 Time-Series Decomposition 264

The Basic Time-Series Decomposition Model	265
Deseasonalizing the Data and Finding Seasonal Indexes	266
Finding the Long-Term Trend	272
Measuring the Cyclical Component	273
Overview of Business Cycles	274
Business Cycle Indicators	275
The Cycle Factor for Private Housing Starts	277
The Time-Series Decomposition Forecast	280
Forecasting Retail Car Sales by Using Time-Series Decomposition	285
Using SORITEC for Time-Series Decomposition	287

7 Box-Jenkins (ARIMA) Type Forecasting Models 305

Introduction	305
The Philosophy of Box-Jenkins	307
Moving-Average Models	309
Autoregressive Models	318
Mixed Autoregressive and Moving-Average Models	321
Stationarity	325
The Box-Jenkins Identification Process	327
Box-Jenkins: A Set of Numerical Examples	334
Example 1	334
Example 2	334
Example 3	336
Example 4	336
Forecasting Seasonal Time Series	340
Retail Car Sales and Seasonal Differencing	344
Using SORITEC for Box-Jenkins Analysis	348

8 Computationally Intensive Statistics: The Bootstrap 362

Computationally Intensive Statistical Techniques	362
The Bootstrap	363
Steps in the Bootstrapping Process	365
Extensions of the Bootstrap Technique	368
Bootstrapping Time-Series Data	373
Conclusion	378

9 Combining Forecast Results 385

Introduction	385
Bias	386
An Example	387
What Kinds of Forecasts Can Be Combined?	391
Considerations in Choosing the Weights for Combined Forecasts	392
Three Techniques for Selecting Weights When Combining Forecasts	396
An Application of the Regression Method for Combining Forecasts	398
Forecasting Retail Car Sales with a Combined Forecast	399
Using SORITEC to Combine Forecasts	404

10 Forecast Implementation 415

The Forecast Process	415
Step 1: Make Objectives Clear	416
Step 2: Determine What to Forecast	417
Step 3: Establish Time Dimensions	417
Step 4: Database Considerations	418
Step 5: Model Selection	418
Step 6: Model Evaluation	419
Step 7: Forecast Preparation	419
Step 8: Forecast Presentation	419
Step 9: Tracking Results	420
Choosing the Right Forecasting Techniques	421
Sales Force Composite (SFC)	421
Customer Surveys (CS)	423
Jury of Executive Opinion (JEO)	423
Delphi Method	423
Naive	424
Moving Averages	424
Simple Exponential Smoothing (SES)	424
Adaptive-Response Exponential Smoothing (ADRES)	424
Holt's Exponential Smoothing (HES)	425
Winters' Exponential Smoothing (WES)	425

Regression-Based Trend Models	425
Regression-Based Trend Models with Seasonality	426
Regression Models with Causality	426
Time-Series Decomposition (TSD)	426
ARIMA	427
Future Directions: Expert Systems in Forecasting	432
Artificial Intelligence and Expert Systems Defined	432
Expert-System Advantages	433
Expert-System Disadvantages	437
