## FOREWORD

The Twenty-Sixth Annual Allerton Conference on Communication, Control, and Computing was held at Allerton House, Monticello, Illinois on September 28-30, 1988. The conference was sponsored by the Coordinated Science Laboratory and the Department of Electrical and Computer Engineering at the University of Illinois at Urbana-Champaign. These *Proceedings* contain the papers presented at the Conference.

We are grateful to Professor Jack Kell Wolf of the University of California at San Diego for his plenary lecture "New Results for Magnetic and Optical Recording Channels." We would like to thank all of the session chairpersons and the authors for their contributions.

We appreciate the support of Professor M.E. Van Valkenburg, founder of the series of Allerton Conferences, Professor T.N. Trick, Head of the Department of Electrical and Computer Engineering, and Professor W.K. Jenkins, Director of the Coordinated Science Laboratory. We would also like our colleagues Professors J.A. Abraham, K. S. Arun, P. Banerjee, M.T. Basar, Y. Bresler, D.J. Brown, W.K. Fuchs, T.S. Huang, R. Iyer, P.V. Kokotovic, P.R. Kumar, H. Lee, M.C. Loui, J.V. Medanic, D.C. Munson, J.H. Patel, W.R. Perkins, K.R. Poolla, H.V. Poor, F.P. Preparata, M.B. Pursley, V. Ramachandran, D.V. Sarwate, and B.W. Wah for their generous assistance in reviewing papers (over 360 were submitted) and organizing the accepted papers into sessions. A special thanks goes to Professor G. Manacher at The University of Illinois at Chicago for his assistance to the program committee.

We are grateful to Mr. Steven Williams for his handling of the business affairs of the Conference, to Mr. Robert Ebeling and his assistants for their timely printing of large numbers of programs and registration packets, to Jennifer Hickman and her assistants at the Allerton House who cheerfully accommodated our group, and especially to Ms. Dixie Murphy, Ms. Janet Reese, Ms. Lila Rhoades, and Ms. Sharon Teuben-Rowe for their capable assistance in handling the Conference announcement, registration, program preparation, and editing and sales of these *Proceedings*. These individuals make the Conference co-chairmen look good by doing most of the work. Finally, we would like to thank Ms. Christina Kamra of John Wiley for sponsoring a coffee break and book display.

M.W. Spong

B. Hajek

## TABLE OF CONTENTS

<b>FOREWORD</b> .....	i
<b>I-A: ESTIMATION AND DETECTION</b>	
Chairman: J. Sacks University of Illinois at Urbana-Champaign	
<b>AN OPTIMUM SEQUENCE ESTIMATION APPROACH IN THE ABSENCE OF SYNCHRONIZATION</b> .....	1
C. N. Georgiades	
<b>COMPUTATION OF THE MINIMUM-ASN BOUNDARIES FOR THE MODIFIED SPRT: PERFORMANCE ANALYSIS AND COMPARISONS</b> .....	11
O. Snorrason and F. D. Garber	
<b>A PARAMETRIC FORM FOR SIEVE-CONSTRAINED MAXIMUM-LIKELIHOOD DENSITY ESTIMATION FROM NOISY DATA</b> .....	13
T. J. Schulz and D. L. Snyder	
<b>ASYMPTOTICALLY EFFICIENT ESTIMATION OF PRIOR PROBABILITIES IN MULTICLASS FINITE MIXTURES</b> .....	15
G. R. Dattatreya and L. N. Kanal	
<b>ROBUST LOCALLY-OPTIMAL DETECTION OF DEPENDENT SIGNALS IN NON-GAUSSIAN NOISE</b> .....	25
P. Willett and P. Srivastava	
<b>CRAMER-RAO BOUNDS FOR CONSTRAINED SPECTRUM ESTIMATION WITH APPLICATION TO A PROBLEM IN RADAR IMAGING</b> .....	27
J. A. O'Sullivan, P. Moulin and D. L. Snyder	
<b>ROBUSTNESS IN TERMS OF A J-DIVERGENCE SIGNAL-TO-NOISE RATIO</b> .....	35
D. Warren	
<b>RESISTANCE AND ROBUSTNESS FOR FINITE MEMORY DETECTORS</b> .....	37
K. S. Vastola	
<b>DECISION FUSION IN DISTRIBUTED DETECTION WITH UNCERTAINTIES</b> .....	39
E. Drakopoulos and C. C. Lee	
<b>I-B: COMPUTATION GEOMETRY</b>	
Chairman: Franco Preparata University of Illinois at Urbana-Champaign	
<b>THE NUMBER OF MAXIMAL EDGE SEQUENCES AS A CONVEX POLYTOPE</b> .....	49
C. Schevon and J. O'Rourke	
<b>TWO TECHNIQUES FOR CREATING EXTRA COMPONENTS TO OBTAIN LOWER BOUNDS</b> .....	58
P. Ramanan	

A SEARCH PROBLEM IN PLANE GEOMETRY .....	63
K. Sugihara, I. Suzuki and M. Yamashita	
GEOMETRIC SELECTION BY PARAMETRIC SEARCH .....	73
J. S. Salowe	
AN OPTIMAL ALGORITHM FOR CONSTRAINED DELAUNAY TRIANGULATION .....	83
D.-M. Jung	
LOWER BOUNDS FOR SOME CONSTRAINED VORONOI DIAGRAMS .....	85
C. A. Wang	
A UNIFIED APPROACH TO FINDING ENCLOSING AND ENCLOSED TRIANGLES .....	87
D. M. Mount and S. Chandran	
COVERING ORTHOGONAL POLYGONS WITH SQUARES .....	97
L. J. Aupperle, H. E. Conn, J. M. Keil and J. O'Rourke	
AN EFFICIENT ON-LINE LINEAR CHEBYSHEV APPROXIMATION ALGORITHM FOR A FINITE PLANAR POINT SET .....	107
B. K. Bhattacharya	
<b>I-C: MULTIPROCESSOR ARCHITECTURES AND ALGORITHMS</b>	
Chairman: Wen-Mei Hwu	
University of Illinois at Urbana-Champaign	
DESIGN AND ANALYSIS OF A HIERARCHICAL SNOOPING CACHE COHERENCE SYSTEM .....	109
M. Azimi and C. Erickson	
A PERFORMANCE STUDY FOR PARALLEL COMPUTATION ON LOOSELY-COUPLED MULTIPROCESSOR SYSTEMS .....	119
L. Liu, J.-K. Peir, A. Bross and D. Shen	
A MAPPING ALGORITHM FOR MULTIPROCESSOR ARCHITECTURES .....	129
S. Yalamanchili and D. T. Lee	
SYSTEMS WITH NEARLY ZERO DISTRIBUTED SIMULATION OVERHEAD .....	139
D. Kumar	
DISTRIBUTED COMPUTATION ON CONCURRENT PROCESSORS TIME SHARED MULTICOMPUTING .....	149
V. K. Madiseti and D. G. Messerschmitt	
<b>I-D: LINEAR SYSTEMS</b>	
Chairman: Juraj V. Mendaic	
University of Illinois at Urbana-Champaign	
NEW RESULTS ON EIGENVALUE CONCEPTS FOR LINEAR TIME VARYING DYNAMICAL SYSTEMS .....	159
J. Zhu and C. D. Johnson	
IMPLUSE RESPONSES AND KERNEL REPRESENTATIONS .....	169
D. Ball and I. W. Sandberg	

<b>CLASSICAL AND EXTENDED TRANSMISSION ZEROS: MODEL MATCHING RELATIONSHIPS</b> .....	177
M. K. Sain, B. F. Wyman and J. L. Peczkowski	
<b>AN EXTENSION OF KHARITONOV'S THEOREM FOR A CLASS OF MULTILINEAR COEFFICIENT PERTURBATIONS</b> .....	187
B. R. Barmish and Z. Shi	
<b>INVARIANT SUBZEROS ARE NOT INVARIANT</b> .....	189
C. B. Schrader and M. K. Sain	
<b>ON STABLE SOLUTIONS OF THE ONE AND TWO SIDED MODEL MATCHING PROBLEMS</b> .....	191
Z. Gao and P. J. Antsaklis	
<b>SYSTEMS IDENTIFICATION AND MODEL REDUCTION OF LINEAR CONTINUOUS SYSTEMS FROM IMPULSE RESPONSE DATA</b> .....	199
P. Agathoklis and V. Sreeram	
<b>NEAR-OPTIMAL MODEL REDUCTION IN BALANCED AND MODAL COORDINATES</b> .....	209
W. Gawronski and J.-N. Juang	
<b>I-E: DIGITAL SIGNAL PROCESSING</b>	
Chairman: K. S. Arun University of Illinois at Urbana-Champaign	
<b>A PARAMETRIC METHOD FOR DETERMINING THE NUMBER OF SIGNALS</b> .....	219
Q. Wu and D. R. Fuhrmann	
<b>AN EXTENDED OBE ALGORITHM FOR ARMA PARAMETER ESTIMATION</b> .....	229
A. K. Rao, Y.-F. Huang and S. Dasgupta	
<b>NONLINEAR ITERATIVE TECHNIQUES FOR IMAGE RESTORATION FROM INCOMPLETE SPECTRAL DATA</b> .....	239
K. D. Sanders and A. C. Bovik	
<b>EIGENANALYSIS BASED BISPECTRUM ESTIMATION</b> .....	249
D. L. Sherman and M. D. Zoltowski	
<b>OPTIMAL DISCRIMINATION OF MULTIDIMENSIONAL AUTOREGRESSIVE PROCESSES</b> .....	251
M. M. Milosavljevic	
<b>II-A: PARALLEL ALGORITHMS</b>	
Chairman: Vijaya Ramachandran University of Illinois at Urbana-Champaign	
<b>EFFICIENT PARALLEL ALGORITHMS FOR STRING EDITING AND RELATED PROBLEMS</b> .....	253
A. Apostolico, M. J. Atallah, L. L. Lamore and H. S. McFaddin	
<b>FAST PARALLEL ALGORITHMS FOR BIPARTITE PERMUTATION GRAPHS</b> .....	264
L. Chen and Y. Yesha	

PT-OPTIMAL ALGORITHMS FOR INTERVAL GRAPHS.....	274
A. Moitra and R. Johnson	
FAST PARALLEL ALGORITHMS FOR TREE DECOMPOSING AND PARSING PARTIAL k-TREES.....	283
N. Chandrasekharan and S. T. Hedetniemi	
AN OPTIMAL PARALLEL ALGORITHM FOR PREEMPTIVE JOB SCHEDULING THAT MINIMIZES MAXIMUM LATENESS.....	293
S. H. Rodger	
FINDING A MINIMAL COVER FOR BINARY IMAGES: AN OPTIMAL PARALLEL ALGORITHM.....	303
D. Moitra	
<b>II-B: NONLINEAR SYSTEMS</b>	
Chairman: Ren Jeng Su University of Colorado at Boulder	
STABILITY ANALYSIS OF ALMOST SINUSOIDAL PERIODIC OSCILLATIONS IN NONLINEAR CONTROL SYSTEMS SUBJECTED TO NONCONSTANT PERIODIC INPUT.....	313
G. S. Krenz and R. K. Miller	
PULSE-WIDTH-MODULATION CONTROLLER DESIGN FOR NONLINEAR DELAY DIFFERENTIAL SYSTEMS .....	321
H. Sira-Ramirez	
DESIGN OF NONCHAOTIC FEEDBACK SYSTEMS.....	331
V. Raman and R.-W. Liu	
LIAPUNOV FUNCTIONS FOR CRITICAL NONLINEAR SYSTEMS.....	338
J.-H. Fu and E. H. Abed	
ON STABILIZATION WITH A PRESCRIBED REGION OF ASYMPTOTIC STABILITY .....	348
L. Saydy, E. H. Abed and A. L. Tits	
APPLICATION OF HAMILTONIAN SYSTEM THEORY TO THREE-MACHINE POWER SYSTEM TRANSIENT ANALYSIS .....	356
T. Guo, N. Narasimhamurthi and N. H. McClamroch	
IDENTIFICATION OF A CLASS OF PARALLEL SYSTEMS .....	366
M. Pawlak	
<b>II-C: FAULT TOLERANCE AND DIAGNOSIS</b>	
Chairman: Kent Fuchs University of Illinois at Urbana-Champaign	
USING REPLICATION TO IMPLEMENT RELIABLE STORAGE .....	368
B. Bhargava and S. Browne	
CORRESPONDENT COMPUTING BASED SOFTWARE FAULT TOLERANCE.....	378
P.-N. Lee, A. Tamboli and J. Blankenship	

IMPROVED UPPER BOUNDS FOR ALGORITHM-BASED FAULT TOLERANCE .....	388

## ABSTRACT

A dynamic programming algorithm for joint maximum-likelihood estimation of sequences and symbol timings is introduced. The algorithm, which makes use of easily computed data, is easily implementable, extremely robust to timing-errors and alleviates, the need for a symbol synchronizer, which in general requires the complete sample-path to produce its timing estimates.

## I. INTRODUCTION

In digital communication systems, an important and integral part of every practical receiver is the symbol synchronization subsystem. The function of the symbol synchronizer is to dictate to the receiver *where* in time the symbols are located. The receiver, subsequently, utilizes this timing information as if it were *perfect* in order to compute its decision statistics and decide *what* the transmitted symbols are. Clearly, this timing information is essential to the receiver and, if inaccurate, the effect could, and often is, catastrophic on system performance.

Extensive work on describing the performance degradation due to imperfect timing information has been done in the past and can be found, for example, in the excellent books of Lindsey and Simon [1] and Stiffler [2]. Results reported in these two references indicate that essentially disastrous results are obtained when the standard deviation of the timing jitter exceeds some small value. The severe performance degradation is due to the contamination of the decision statistics by adjacent symbols as a result of imperfect timing, -effectively reducing the signal-to-noise ratio- and because the receiver makes decisions assuming that the timing information is perfect. This assumption is in general not valid and leaves the receiver defenseless in the presence of, possibly, large timing-errors. We will see later in this paper that a receiver designed to make decisions in the presence of timing-errors has significant performance advantages over conventional receivers that rely blindly on the synchronization subsystem to provide timing information. Other approaches to the synchronization problem of interest can be found in [10].

## II. ALGORITHM DERIVATION

In this section a dynamic programming algorithm for delay estimation and joint delay and sequence estimation is derived for a Gaussian channel and binary, antipodal signaling. Similar algorithms for other modulation schemes and for an optical Poisson channel can be found in [11].

We have the following communication problem

$$r(t) = \sum_{j=-\infty}^{\infty} S_j(t) + n(t), \quad (1)$$

where  $S_j(t) \in \{S(t), -S(t)\}$ ,  $(j-1)T \leq t \leq jT$  is one of two antipodal modulation signals chosen independently and with equal probability and

$$\int_0^T S^2(t)dt = E.$$

Under our white Gaussian noise assumption,  $n(t)$  is zero-mean, white Gaussian noise with spectral density  $N_0/2$ .

Not having a timing reference, the receiver computes sequentially the following statistics

$$r_j = \frac{1}{E} \int_{(j-1)T}^{jT} r(t - \tau') S(t) dt, \quad j = 1, 2, \dots, N, \dots, \quad (2)$$

where,  $\tau' \in [0, T)$  is the timing-error, as shown in Figure 1. Obviously, if  $\tau' = 0$ , the statistics  $\{r_j, j = 1, 2, \dots, N, \dots\}$  constitute a sufficient statistic for the sequence estimation problem. In the presence of timing-error, however, although the  $r_j$  clearly contain information about the transmitted sequence, they are not a sufficient statistic and, thus, decisions based on them are not globally optimal. On the other hand, computing the statistics  $r_j$  requires very little complexity and, as we will see later, the performance obtained based on these statistics can be significantly better than the performance of conventional receivers utilizing a separate synchronizer.

The problem we address in this paper is that of optimally estimating sequences of symbols and the timing-error from the incomplete statistics  $\{r_j, j = 1, 2, \dots\}$ . We begin by deriving a likelihood function of the observed data conditioned on the timing-error  $\tau'$  and the modulation sequence.

Let  $\mathbf{r} = (r_1, r_2, \dots, r_N)$  be the vector containing the computed statistics  $r_j$ ,  $j = 1, 2, \dots, N$  and  $\mathbf{x} = (x_1, x_2, \dots, x_{N+1})$ ,  $x_i \in \{1, -1\}$ , be the modulation sequence resulting in the received vector  $\mathbf{r}$ . The elements of  $\mathbf{r}$  are conditionally independent, Gaussian random variables with mean

$$E[r_j/\mathbf{x}, \tau'] = x_j \frac{1}{E} \int_0^{\tau'} S(t) S(t + T - \tau') dt + x_{j+1} \frac{1}{E} \int_{\tau'}^T S(t) S(t - \tau') dt. \quad (3)$$

The variance of each  $r_j$  conditioned on the timing-error  $\tau'$  and the modulation sequence  $\mathbf{x}$  is

$$\text{VAR}[r_j/\mathbf{x}, \tau'] = N_0/2E, \quad (4)$$

independently of  $j$ . Assuming rectangular pulses  $S(t)$  and letting

$$\tau = \frac{1}{E} \int_0^{\tau'} S(t) S(t + T - \tau') dt = \frac{\tau'}{T} \quad (5)$$
