Preface

Volumes 160 and 161 of *Methods in Enzymology* collate for the first time an array of procedures related to the enzymatic conversion of plant structural biomass polymers into their constituent monomeric units. This collection of methods for the hydrolysis of cellulose and hemicellulose (Volume 160) and of lignin, as well as related methods for pectin and chitin (Volume 161), is timely because of the increasing tempo of investigation in this area. This is in response to an immediate interest in the conversion of biomass monosaccharides into fuel ethanol and the longer term concern for maintaining supplies of liquid fuels and chemicals with eventual petroleum depletion.

Enzymatic treatment of plant biomass involves special methods due to the insolubility of the lignocellulosic complex and other similar polymers. These methods include substrate preparation, measurement of chemical changes, and culturing of organisms that produce the enzymes. Many of the methods are published in applied and special purpose journals not routinely seen by investigators and hence are not highly visible.

The ability to clone genes, transform cells, and express and secrete heterologous proteins in industrially important microorganisms presents opportunities to produce biomass enzymes in large quantity and at low prices. When this capacity is developed, enzymes will not be selected because of better production in a wild-type organism. Instead, the enzymes will be chosen for their superior catalytic capability and compatibility with the conditions of an industrial process. Since genes from various and often obscure organisms may produce enzymes better suited to such purposes, we have attempted to include methods for the preparation of enzymes in each class, for instance endocellulases, from a wide variety of sources so that investigators seeking to develop useful processes may make use of the options available.

We wish to acknowledge the expert secretarial assistance of Ms. Karen Payne in preparation of these volumes.

WILLIS A. WOOD
SCOTT T. KELLOGG

Enzyme Kinetics and Mechanism (Part A: Initial Rate and Inhibitor Methods)***Edited by* DANIEL L. PURICH**VOLUME 64. Enzyme Kinetics and Mechanism (Part B: Isotopic Probes and Complex Enzyme Systems)***Edited by* DANIEL L. PURICH**VOLUME 65. Nucleic Acids (Part I)***Edited by* LAWRENCE GROSSMAN AND KIVIE MOLDAVE**VOLUME 66. Vitamins and Coenzymes (Part E)***Edited by* DONALD B. MCCORMICK AND LEMUEL D. WRIGHT**VOLUME 67. Vitamins and Coenzymes (Part F)***Edited by* DONALD B. MCCORMICK AND LEMUEL D. WRIGHT**VOLUME 68. Recombinant DNA***Edited by* RAY WU**VOLUME 69. Photosynthesis and Nitrogen Fixation (Part C)***Edited by* ANTHONY SAN PIETRO**VOLUME 70. Immunochemical Techniques (Part A)***Edited by* HELEN VAN VUNAKIS AND JOHN J. LANGONE**VOLUME 71. Lipids (Part C)***Edited by* JOHN M. LOWENSTEIN**VOLUME 72. Lipids (Part D)***Edited by* JOHN M. LOWENSTEIN

VOLUME 73. Immunochemical Techniques (Part B)*Edited by* JOHN J. LANGONE AND HELEN VAN VUNAKIS**VOLUME 74. Immunochemical Techniques (Part C)***Edited by* JOHN J. LANGONE AND HELEN VAN VUNAKIS**VOLUME 75. Cumulative Subject Index Volumes XXXI, XXXII, XXXIV–LX***Edited by* EDWARD A. DENNIS AND MARTHA G. DENNIS**VOLUME 76. Hemoglobins***Edited by* ERALDO ANTONINI, LUIGI ROSSI-BERNARDI, AND EMILIA CHIANCONE**VOLUME 77. Detoxication and Drug Metabolism***Edited by* WILLIAM B. JAKOBY**VOLUME 78. Interferons (Part A)***Edited by* SIDNEY PESTKA**VOLUME 79. Interferons (Part B)***Edited by* SIDNEY PESTKA**VOLUME 80. Proteolytic Enzymes (Part C)***Edited by* LASZLO LORAND**VOLUME 81. Biomembranes (Part H: Visual Pigments and Purple Membranes, I)***Edited by* LESTER PACKER**VOLUME 82. Structural and Contractile Proteins (Part A: Extracellular Matrix)***Edited by* LEON W. CUNNINGHAM AND DIXIE W. FREDERIKSEN**VOLUME 83. Complex Carbohydrates (Part D)***Edited by* VICTOR GINSBURG**VOLUME 84. Immunochemical Techniques (Part D: Selected Immunoassays)***Edited by* JOHN J. LANGONE AND HELEN VAN VUNAKIS
