Preface to the Student

You have probably been told many times that writing is a basic skill, one that is necessary for success in the real world as well as in college, regardless of the field of study you wish to pursue. You may have accepted this truism, though perhaps skeptically, especially if you are planning a career in, say, medicine or electrical engineering. An important aim of this book, in addition to helping you become a better writer, is to give you a sense of how writing contributes to any kind of learning—as well as to the thinking process itself.

Writing helps us to understand ourselves, our ideas, and our feelings, fully and accurately. Certainly, we often verbalize our thoughts, which can be helpful and often necessary; but writing gives us the added advantage of allowing us to see those thoughts materialized on paper. This process in turn allows us to double-check our statements, to alter them slightly or to remove anything we didn't really want to say, and to make them even more persuasive by adding better examples to support our assertions. Writing makes our thoughts more communicable to other people as well as to ourselves. Because we live in a multicultural society with many value systems, knowing how to communicate our thoughts accurately is more than a necessity—it is a survival tactic.

A textbook on writing can be no more than a guide. It cannot be a "training manual" that will teach you all you need to know about how to write. It functions much like a librarian who can do no more than show you the library and explain the basic procedures for using its resources; which resources you care to use, and why, must be your judgment alone. This particular textbook, certainly, will reveal much about the art and craft of composition and about the principles that underlie all good writing; but it refuses to force your hand and say, "You must do it like this."

The concept “good writing” is meaningless until it is considered within a particular situation. Mark Twain produced “good writing”; so did J. D. Salinger, Ernest Hemingway, Franz Kafka, and Virginia Woolf. But what do these writers share in common? They all knew enough about language to be able to reproduce on paper what was churning about inside their hearts and minds. They knew how to involve and delight their readers—and yet, could one of them have imposed his or her style of writing upon the others? Hardly.

Learning to write well takes time. Even if you have a burning desire to be a writer, you must be as patient as you are persistent. When you are learning to write you are actually learning to think and observe more acutely. You are also learning to interact with the human community and to draw from the resources of others as a way of shaping your own original ideas. You cannot acquire a skill of this depth and richness in a week or two, nor even by the end of your freshman year. But you, as well as this textbook, will succeed if the wheels are set in motion; for learning to write is ultimately a self-guided task. Once you understand the scope of that task and have learned to distinguish between good writing and bad—in your own work as well as in others’—you will have gained the most prized benefit that this book can hope to offer.

Preface to the Teacher

In writing this textbook I have aimed high. I have tried to create a book that students could read with as much pleasure as edification. I have tried to give students, who are often filled with great expectations, a deep-rooted awareness of writing's central importance to education. I want to place in their hands a textbook that clearly shows them how to transform ideas and sensory impressions into words on paper, and how skill in writing enhances comprehension of what is being written about.

The Writer's Art provides several valuable and innovative elements not likely to be found together in a single rhetoric text:

- *A thorough introduction to the dynamics of composing, with options* (there is no such thing as "the" composing process). Emphasis is on the actual habits of working writers. For example, the chapter on sentences includes sections on creating syntactic variety and moving toward syntactic virtuosity; the chapter on paragraphs looks at paragraph structure in relation to the whole discourse, and it includes a section on alternatives to the "well-made" paragraph.
- *Numerous models by both student and professional writers*, covering topics across the curriculum—topics that young men and women in their first year of college will enjoy reading and will learn from.
- *Imaginative "computer writing" exercises for most chapters, plus a chapter on the basics of composing on a personal computer.*
- *A complete guide to research, both in and out of the library*, including techniques of conducting an interview, searching a computer database, and designing a questionnaire. This chapter aims to generate *enthusiasm* for research as well as to introduce the fundamentals of information gathering/assimilating.

- *Three model research papers from three principal disciplines*—physical science, social science, and fine arts. Each research paper is annotated and discussed.
- *Both new and old MLA documentation formats.*
- *Extensive guide to major reference works across the disciplines.*
- *Special topics:* mass-media persuasion • sentence-combining • writing book/performance/film reviews • explications of literary texts • maintaining a journal • preparing for conference tutorials • participating in classroom workshops • writing essay exams.
- *Thorough handbook that includes sections on:* rhetorical and grammatical principles • usage • punctuation and mechanics • spelling • manuscript formatting. All sections include exercises, along with a diagnostic test at the end.

Throughout the book, writing projects are presented separately from the rhetorical principles usually associated with those projects. These “projects” chapters are, in effect, extended writing assignments. Not enough attention has been paid in composition texts to the importance of presenting writing assignments to students; these chapters will fulfill this long-overlooked need.

Rhetoricians sometimes bemoan the “writing in a vacuum” syndrome that can plague the composition course. How can a teacher set up “real” rhetorical situations, working from genuine exigencies? The problem is not as serious as it may seem at first. Certainly one ingredient for making a writing assignment challenging and beneficial is imagination. The directions to the assignment should not only be clear enough to appear “do-able,” but they should also engage students enough to encourage them to *participate*—by willing suspension of disbelief or otherwise—in the exigency introduced. In other words, the assignment should *motivate* the student to write. The assignments throughout this text have been carefully designed to achieve these important objectives.

Finally, *The Writer's Art* is an interdisciplinary textbook. Because writing is, by its very nature, an interdisciplinary activity—as vital to electrical engineers, painters, and economists as it is to literary scholars and poets—a textbook on writing ought to draw from as many disciplines as possible. I disagree with the notion that students from a given major field of study should concern themselves only with writing that is relevant to that discipline. Students must gain insight into the way that writing is important to all disciplines. Freshman composition is the ideal place for them to discover this. Indeed, *The Writer's Art* was conceived as a vehicle for demonstrating the extent to which this is true.

Acknowledgments

It is my pleasure to acknowledge those persons who have helped to bring this enormous project to fruition. I am indebted to professors Chris Anderson, University of North Carolina, Greensboro; Patricia Grignon, Saddleback College South; Susan Betts Landstrom, University of North Carolina, Chapel Hill; Stephen Lynn, University of South Carolina, Columbia; Thomas Moore, University of Maryland; Elizabeth Penfield, University of New Orleans; Susan Petit, College of San Mateo; David Rankin, California State University, Dominguez Hills; Ken Risdon, University of Minnesota; Laurel Sutton; and Nancy Walker, Southwest Missouri State University, for reviewing the manuscript in its various stages of completion and for providing me with invaluable suggestions.

I am also grateful to my Santa Clara colleagues, Professor Mary Ann Aschauer, Professor James P. Degnan, Professor Diane E. Dreher, Professor Helen Moritz, and Professor Richard H. Osberg, for their valuable responses to various chapters.

To my chair, Reverend Charles T. Phipps, S.J., and to my dean, Professor Joseph Subbiondo, I express my gratitude for the reduced teaching load granted me during a critical stage of composition.

To Santa Clara's academic vice president, Reverend Paul Locatelli, S.J., my heartfelt thanks for a university computer grant to study the effects of writing with a microcomputer, and for the indefinite use of an IBM Personal Computer. It was this research, and the use of this equipment, that enabled me to prepare the material relating to composing on a computer, as well as the computer-writing activities presented throughout the book.

For their many hours of assistance with the preparation of the manuscript—with typescript before I received my computer, as well as with innumerable printouts of later drafts—I want to express my thanks to Patty Dionne, Lathell North, and Jo Anna Watt.

I would also like to pay homage to those students who have supplied me with their fine essays, every one of which is an indispensable asset to this book: Don Ballew, Jeff Brown, Evan Elliot, Tom Gough, Thomas Hogendijk, JoAnn Lambkin, Anita Lee, Christine Long, Marie Noble, Ron K. Rock, Jr., and Mike White. A note of thanks also goes to Professor Jane Honeycutt, University of Santa Clara, for calling my attention to her student, Jeff Brown, and his research paper on computer programming.

No author could have been more fortunate than I in working with an editorial staff like Wadsworth's. For his complete faith in me and my work at a time when there wasn't too much to go on, I extend my deepest thanks to Kevin Howat, executive editor. I also thank my production editor, Jane Townsend, and editors Cedric Crocker, John Strohmeier, and

Judith McKibben for their warm support and inexhaustible stream of sage advice. Designer MaryEllen Podgorski, marketing specialist Joy Westberg, marketing manager Terry Baxter, regional field manager Tina Allen, and permissions editors Peggy Meehan and Virginia Phipps have all been wonderfully supportive; I am indeed grateful for their wise counsel and their friendship.

A special note of thanks goes to Lisa Danchi, copy editor, for her keen perception in spotting stylistic flaws and problems with formatting, and for calling my attention to several concepts needing further elaboration or clarification.

And finally, unceasing thanks to my family—to my daughter Laura and my son Michael for their willingness to respond to chapter sections and writing exercises, and to my wife Beverly, to whom I dedicate this book, for her years of selfless devotion.
