Preface to the Paperback Edition

We originally wrote this book because we were fascinated by how and why 'modernizing' initiatives of various kinds can lead to outcomes that no one intended and few anticipated. So we wanted to delve into what the beguiling idea of modernization means. We assembled a set of cases of modernization initiatives with effects that were unintended, ranging from happy surprises through unwelcome side-effects to serious failures. And we set out to explore what are the distinctive characteristics of public policy reforms with modernization aims that go wrong.

Since the book was written, there have been dramatic large-scale events which make an exploration of modernization more timely than ever. One major example is the world financial crisis stemming from the failure of the complicated and ostensibly modern regulatory systems designed to manage financial risk. A once-feted system of risk-based regulation applied to technologically based market operating systems (such as derivatives, trading algorithms, dividing risk into smaller tradeable units) has been, quite literally, tested to destruction, with catastrophic results. No less dramatically, some of the established characteristics of the modern state system have been challenged by a social backlash on a scale anticipated by few people. Across Europe, North America, and beyond, there has been negative feedback against banks, governments imposing spending cuts, and even against modern capitalism itself by the aggrieved and disenchanted. That backlash has manifested itself in demonstrations, protests, capital outflow, and even riots, the extent of which have surprised policy-makers.

In North Africa and the Middle East, a wave of demonstrations, riots, and armed rebellions unanticipated by those steeped in 'orientalist' conceptions of that region caused some regimes to fail or have to face civil war. Some mobilizations have been successful in overturning autocratic and repressive regimes and have earned the 'revolution' label, with moves towards democracy in places where until recently it seemed impossible. There have also been disastrous results not only for those regimes themselves but for the many citizens who were killed or impoverished, and for

the international legitimacy of the western countries which had for so long supported those regimes.

All these sets of events illustrate what can happen when modernization of the state lags behind technological modernization in society at large. In the aftermath of the financial crisis, it became clear that states and policy-makers had placed their faith in 'light touch' regulatory strategies which were entirely inadequate to address technological modernization in the markets at which they were aimed. Policy-makers can find themselves in catch-up mode, relying on technologies and strategies which mean that they struggle to divine where, when, and how the next event will take place. Even the rioters that terrorized streets in some English cities in the summer of 2011, defined by some policy-makers as belonging to the 'underclass', not generally known for technological sophistication, were using Blackberrys, which provided secure messaging. Although police intelligence officers were able subsequently to access Blackberry data sets to identify suspects, they did not have access to the data while the riots were going on. To the frustration of many citizens, police in England therefore had to concentrate on using technologies to assist in arrests after the events rather than in intervening with 'red-handed' suspects.

In technologically less sophisticated regimes, the technological and informational capacity of police and security agencies to control and manage demonstrations and protests has been weakened by the capacity of ordinary citizens to mobilize, organize, and coordinate using an ever-changing cast of social media platforms. In at least some cases, this has been a happy rather than an unhappy surprise. Some autocratic regimes toppled or threatened by the revolutions of the Arab world and North Africa might have been able to do more to save themselves if they had understood better — as, at least until now, the regimes in Iran and China appear to have done — what their people were doing with communications technologies. In Syria, for example, while the country threatened to erupt into civil war in a succession of civilian demonstrations and riots and military crack-down, officials asked potential supporters of the protest at the airport if they 'have the facebook' in their luggage. Far from furthering the rationalization of the state that early modernizers predicted (and anti-modernist commentators decried), societal use of technologies that outstrip and outwit those of the state may bring policy-makers ever more uncertainty and surprise.

This book's analysis has something important to offer to those seeking to understand such epoch-making institutional collapses, as well as the more everyday types of surprises represented by our case studies. We argue that

unhappy outcomes often stem from unbalanced combinations of modernization and insufficient variety in institutional forms and consequent blinding of institutional ability to listen and learn. That explanation applies just as strongly to rare catastrophic events such as global financial crises and regime collapses as it does to the more commonly occurring cases of underachievement, waste, futility, and unwelcome side-effects from the modernization initiatives that are explored in this book.

Ever since 1929 (and no doubt earlier) political scientists have liked to tease economists about financial crashes — ‘why did you not see it coming?’ But events such as the 2011 ‘Arab spring’ put the joke on us political scientists. By looking in detail at modernization reforms — trying to understand the modernization processes that succeed and those that do not — we hope this book will inform policy and institutional design, making us a little less vulnerable to complete surprise and shock from the next major development on the horizon.

Helen Margetts

Christopher Hood

Acknowledgements

We would like to thank all presenters and participants in the seminar series ‘Unintended Consequences of Public Policy Reform’ hosted by the Oxford Internet Institute and the ESRC Public Services Programme in Oxford during 2007–8, for valuable discussions and development of issues covered in this book. We are very grateful to the OII and the ESRC for supporting and funding these seminars. We thank Nesrine Abdel Sattar for her work on the bibliography, Klaus Goetz for some valuable discussions on modernization and Josep Colomer, who found the painting for the front cover. Finally, we thank all those people who have helped us with the book — without necessarily intending to.

Contributors

Perri 6 is Professor of Social Policy in the Graduate School of the College of Business, Law and Social Policy at Nottingham Trent University. His recent books include *Explaining Political Judgement* (Cambridge University Press, 2011), *Principles of Methodology* (with C. Bellamy, Sage, 2012), *Institutional Dynamics of Culture* (ed. with G. Mars, Ashgate, 2008), *Public Emotions* (ed. with S. Radstone, C. Squire and A. Treacher, Palgrave, 2007), *Beyond Delivery* (with E. Peck, Palgrave, 2006), *Managing Networks of Twenty First Century Organisations* (with N. Goodwin, E. Peck and T. Freeman, Palgrave, 2006) and *E-governance* (Palgrave, 2004). He is well known for his work on joined-up government, consumer choice in public services, privacy, and data protection, and on social networks, and has published articles in such journals as *Political Studies*, *Public Administration*, *Journal of Public Administration Research and Theory*, *Policy and Politics*, *Journal of Social Policy*, and *Journal of Comparative Policy Analysis*. He is currently researching how different styles of political judgement result in decisions that produce different types of unintended consequences.

George Boyne is Professor of Public Sector Management at Cardiff Business School, Cardiff University. His main current research interests are organizational performance, executive succession, and structural change in public services. His recent books include *Public Service Performance: Perspectives on Measurement and Management* (Cambridge University Press, 2006) and *Theories of Public Service Improvement* (Oxford University Press, 2009). He is President of the Public Management Research Association, co-editor of the *Journal of Public Administration Research and Theory* and a member of the ESRC Research Grants Board.

H. George Frederickson is the Edwin O. Stene Distinguished Professor of Public Administration at the University of Kansas. He is President Emeritus of Eastern Washington University. Frederickson is the author or co-author of *The New Public Administration*, *The Spirit of Public Administration*, *The Public Administration Theory Primer*, and *Measuring the Performance of the Hollow State*. His most recent book, *Social Equity and Public Administration*, was published in January 2010. Frederickson is a Fellow of the National

Contributors

Academy of Public Administration and serves on the Academy Board of Directors. He is Editor-in-Chief of the *Journal of Public Administration Research and Theory*. Frederickson has received the Dwight Waldo Award, The Charles Levine Award, The John Gaus Lecture Award, and the Distinguished Research in Public Administration Award. The Lifetime Award for Contributions to Public Administration Research of the Public Management Research Association is named in his honour as is the *Public Administration Times* Best Article Award.

Jeanette Hofmann is a researcher at the Social Science Research Centre, Berlin and a director of the Alexander von Humboldt Institute for Internet and Society. Her work focuses on global governance, particularly on the regulation of the internet, and on the transformation of intellectual property rights. She holds a PhD in Political Science from the Free University Berlin. In 2009, she co-edited *Governance als Prozess* (Governance as process), an interdisciplinary collection of contributions to governance research.

Christopher Hood has been Gladstone Professor of Government and Fellow of All Souls College Oxford since 2001 and was Director of the UK Economic and Social Research Council Public Services Research Programme from 2004 to 2010. Before that he held chairs at the London School of Economics and the University of Sydney, New South Wales, and was a lecturer at the University of Glasgow for fourteen years. His publications include *The Limits of Administration* (Wiley, 1976), *The Tools of Government* (Palgrave Macmillan, 1983, updated as *The Tools of Government in the Digital Age*, 2007, with Helen Margetts), *The Art of the State* (Oxford University Press, 1998 and 2000), and *The Politics of Public Service Bargains* (Oxford University Press, 2006, with Martin Lodge). His latest book, *The Blame Game*, was published in 2011 by Princeton University Press.

Oliver James BA (Oxon.), MSc, PhD (LSE, London) is Professor of Politics, Department of Politics, University of Exeter, UK. His research interests include citizens and users' interaction with public services — especially satisfaction with public services and political participation, reform of public organization, and regulation of the public sector. Recent publications include (with G. A. Boyne, P. John, and N. Petrovsky), 'Democracy and Government Performance: Holding Incumbents Accountable in English Local Governments', *Journal of Politics*, 71/4 (2009) and 'Evaluating the Expectations Disconfirmation and Expectations Anchoring Approaches to Citizen Satisfaction with Local Public Services', *Journal of Public Administration Research and Theory*, 19/1 (2009), 103–27.

Peter John is Professor of Political Science and Public Policy at University College London. He is known for his work on public policy and urban politics, and he is author of *Analysing Public Policy* (1998), *Local Governance in Western Europe* (2001), and *Making Policy Work* (2011). He is currently working on two main projects: one applying the experimental method to the study of civic engagement and collective action, the other mapping the decisions of British government since 1911.

Justin Keen has been Professor of Health Politics at the Institute of Health Sciences, University of Leeds, since 2001. His research interests include the politics of information technologies in healthcare, the coordination of care delivery, and health and social care policy. Since 2008 he has also been director of a National Institute for Health Research programme, whose purpose is to 'bridge the gap' between the worlds of research and clinical practice, with the aim of improving the use of research evidence in the NHS.

Tim Leunig is Reader in Economic History at the London School of Economics and Chief Economist at the think tank CentreForum. His academic publications include *Time is Money*, an analysis of the value of time savings generated by the invention and use of the train in the nineteenth century. As well as his academic work, he is the author of public policy papers for various think-tanks, and writes for the *Financial Times*, *Prospect Magazine*, and *Inside Housing*.

Helen Margetts is Professor of Society and the Internet and Director of the Oxford Internet Institute (OII), and Fellow of Mansfield College, University of Oxford. A political scientist specializing in politics and government on the internet, she has authored and co-authored a wide range of books, articles, and policy reports, including (with Patrick Dunleavy and others) *Digital-Era Governance* (Oxford University Press, 2006); (with Christopher Hood) *Tools of Government in the Digital Age* (Palgrave Macmillan, 2007); and *Government on the Internet* (a joint LSE-OII study for the NAO, 2007). She is editor of the journal *Policy and Internet*.

David Marsden is Professor of Industrial Relations at the London School of Economics and a Research Associate of the Centre for Economic Performance. He did his doctoral work at the Laboratoire d'Économie et de Sociologie du Travail (CNRS), Aix-en-Provence, and developed a lasting interest in comparative analysis of labour markets and labour institutions. His books include *The End of Economic Man: Custom and Competition in Labour Markets* (Wheatsheaf, 1986), published also in French and Spanish, and *A Theory of Employment Systems: Micro-Foundations of Societal Diversity* (Oxford University Press, 1999), published

also in Japanese. His recent research includes studies of pay and incentives in Britain and France, and a number studies on the effects of performance pay and of absenteeism in the British public services. He has also worked with the ILO and the OECD on public-service pay questions. He is currently working on a book on a comparative theory of human resource management.

Nicolai Petrovsky is an assistant professor in the Martin School of Public Policy and Administration at the University of Kentucky. His main research interests are the performance and responsiveness of public organizations in democratic countries. Before coming to Kentucky, Nicolai worked for three years at Cardiff University in Wales on a research project about leadership turnover and performance of English local government. Nicolai has published in journals including the *Journal of Politics*, *Public Administration*, and *Defence and Peace Economics*, and contributed a chapter to the Oxford University Press book *Public Service Improvement: Theories and Evidence*.

Devi Sridhar is a Postdoctoral Research Fellow at All Souls College Oxford, and Director of the Global Health project at the Global Economic Governance Programme, Department of Politics and International Relations, Oxford. She is also visiting faculty in health policy at the Public Health Foundation of India. She is the author of *The Battle Against Hunger: Choice, Circumstance and the World Bank* (Oxford University Press, 2008) and editor of *Inside Organisations: South Asian Case Studies* (Sage, 2008). She is currently working on a book on the politics of global health with a focus on public health policy in India.

Edmund C. Stazyk is an Assistant Professor with the Department of Public Administration and Policy in the School of Public Affairs at American University in Washington, DC. His research focuses on the application of organization theory and behaviour to public management, public administration theory, and human resources issues. More specifically, much of his research examines organizational and individual performance with an emphasis on bureaucracy and employee motivation—particularly public-service motivation. He also works in the areas of organizational design, ethics, and human capital.

Yorick Wilks is Professor of Artificial Intelligence at the University of Sheffield, and is also a Senior Research Fellow at the Oxford Internet Institute. He studied maths and philosophy at Cambridge, where he got his Ph.D. in 1968. He has published numerous articles and six books in artificial intelligence concerned with language processing, and has most recently edited *Close Engagements with Artificial Companions* (Benjamins,

2009). He is a Fellow of the American and European Associations for Artificial Intelligence, a member of the EPSRC College of Computing, a member of the UK Computing Research Council and on the boards of some fifteen AI-related journals. He was founding Coordinator of the EU 6th Framework integrated project COMPANIONS (4 years, 15 sites, 1.3m euro) on conversational assistants as personalized and permanent web interfaces.
