<i>Useful Statistical Functions in Excel</i>	<i>Description</i>
AVERAGE(<i>data range</i>)	Computes the average value (arithmetic mean) of a set of data.
BETADIST(<i>x, alpha, beta, A, B</i>)	Returns the cumulative beta density function.
BINOMDIST(<i>number_s, trials, probability_s, cumulative</i>)	Returns the individual term binomial distribution.
CHITEST(<i>actual_range, expected_range</i>)	Returns the test for independence; the value of the chi-square distribution and the appropriate degrees of freedom.
CONFIDENCE(<i>alpha, standard_dev, size</i>)	Returns the confidence interval for a population mean.
CORREL(<i>array1, array2</i>)	Computes the correlation coefficient between two data sets.
EXPONDIST(<i>x, lambda, cumulative</i>)	Returns the exponential distribution.
FORECAST(<i>x, known_y's, known_x's</i>)	Calculates a future value along a linear trend.
GAMMADIST(<i>x, alpha, beta, cumulative</i>)	Returns the gamma distribution.
GROWTH(<i>known_y's, known_x's, new_x's, constant</i>)	Calculates predicted exponential growth.
LINEST(<i>known_y's, known_x's, new_x's, constant, stats</i>)	Returns an array that describes a straight line that best fits the data.
LOGNORMDIST(<i>x, mean, standard_deviation</i>)	Returns the cumulative lognormal distribution of x , where $\ln(x)$ is normally distributed with parameters mean and standard deviation.
MEDIAN(<i>data range</i>)	Computes the median (middle value) of a set of data.
MODE(<i>data range</i>)	Computes the mode (most frequently occurring) of a set of data.
NORMDIST(<i>x, mean, standard_deviation, cumulative</i>)	Returns the normal cumulative distribution for the specified mean and standard deviation.
NORMSDIST(<i>z</i>)	Returns the standard normal cumulative distribution (mean = 0, standard deviation = 1).
PERCENTILE(<i>array, k</i>)	Computes the k th percentile of data in a range.
POISSON(<i>x, mean, cumulative</i>)	Returns the Poisson distribution.
QUARTILE(<i>array, quart</i>)	Computes the quartile of a distribution.
SKEW(<i>data range</i>)	Computes the skewness, a measure of the degree to which a distribution is not symmetric around its mean.
STANDARDIZE(<i>x, mean, standard_deviation</i>)	Returns a normalized value for a distribution characterized by a mean and standard deviation.
STDEV(<i>data range</i>)	Computes the standard deviation of a set of data, assumed to be a sample.
STDEVP(<i>data range</i>)	Computes the standard deviation of a set of data, assumed to be an entire population.
TREND(<i>known_y's, known_x's, new_x's, constant</i>)	Returns values along a linear trend line.
TTEST(<i>array1, array2, tails, type</i>)	Returns the probability associated with a t -test.
VAR(<i>data range</i>)	Computes the variance of a set of data, assumed to be a sample.
VARP(<i>data range</i>)	Computes the variance of a set of data, assumed to be an entire population.
WEIBULL(<i>x, alpha, beta, cumulative</i>)	Returns the Weibull distribution.
ZTEST(<i>array, x, sigma</i>)	Returns the two-tailed p -value of a z -test.

PREFACE

INTENDED AUDIENCE

Statistics, Data Analysis, and Decision Modeling was written to meet the need for an introductory text that provides a basic introduction to business statistics and decision models/optimization, focusing on practical applications of data analysis and decision modeling, all presented in a simple and straightforward fashion.

The text consists of 14 chapters in two distinct parts. The first eight chapters deal with statistical and data analysis topics, while the remaining chapters deal with decision models and applications. Thus, the text may be used for:

- MBA or undergraduate business programs that combine topics in business statistics and management science into a single, brief, quantitative methods course.
- Business programs that teach statistics and management science in short, modular courses.
- Executive MBA programs.
- Graduate refresher courses for business statistics and management science.

SUBSTANCE

The danger in using quantitative methods does not generally lie in the inability to perform the requisite calculations, but rather in the lack of a fundamental understanding of why to use a procedure, how to use it correctly, and how to properly interpret results. The principal focus of this text is conceptual understanding using simple and practical examples rather than a plug-and-chug or point-and-click mentality, as are often done in other texts, supplemented by appropriate theory. On the other hand, the text does not attempt to be an encyclopedia of detailed quantitative procedures, but focuses in on useful concepts and tools for today's managers.

To support the presentation of topics in business statistics and decision modeling, this text integrates fundamental theory and practical applications in a spreadsheet environment using *Microsoft Excel 2007* and various spreadsheet add-ins, specifically:

- *PHStat*, a collection of statistical tools that enhance the capabilities of Excel; published by Pearson Education.
- A time limited professional version of *Crystal Ball* (including *CBPredictor* for forecasting and *OptQuest* for optimization), the most popular commercial package for risk analysis.
- *TreePlan*, a decision analysis add-in.
- *SimQuick*, an Excel-based application for process simulation, published by Pearson Education.
- *Premium Solver*, a more powerful version of Excel's Solver.

These tools have been integrated throughout the text to simplify the presentations and implement tools and calculations so that more focus can be placed on interpretation

and understanding the managerial implications of results. However, as not to disrupt the flow of the text discussion and distract from conceptual understanding, we have placed boxed “Notes” for Excel, *PHStat*, and other add-ins that provide procedural details of using specific functions, tools, or techniques where appropriate.

NEW TO THIS EDITION

The fourth edition of this text has been substantially re-written to improve clarity and pedagogical features. Many significant changes have been made in this edition. These changes include the following.

1. Spreadsheet-based tools and applications are now compatible with *Microsoft Excel 2007*, which is used throughout this edition.
2. Every chapter has been carefully revised to improve clarity of the material. Many explanations of critical concepts have been enhanced using new business examples and data sets.
3. Key decision modeling chapters in Part 2 of this book have been significantly revised and reorganized. These are Chapter 9—*Building and Using Decision Models*, Chapter 13—*Linear Optimization*, and Chapter 14—*Integer and Nonlinear Optimization*.
4. Theory and extensive computational formulas have been relegated to end of chapter Appendixes to provide better flexibility for instructors, and not impede learning essential concepts and skills.
5. End-of-chapter material has been enhanced and reorganized to include *Basic Concepts Review Questions* that focus on the understanding of fundamental terms concepts; *Skill-Building Exercises* that facilitate experiential learning and Excel-based skills, and *Problems and Applications*, which provide a wide variety of numerical exercises and practical applications to real and/or realistic data sets or problem scenarios. New cases are introduced in most chapters.

TO THE STUDENTS

The CD-ROM accompanying this text contains all the data and model files used throughout the text in examples, problems, and exercises. These are also available on the text’s Web site, www.pearsonhighered.com/evans. Versions of a variety of software packages, including *PHStat*, *SimQuick*, *Crystal Ball*, and *Premium Solver*, are also available in connection with this text. For complete information on these, please also visit www.pearsonhighered.com/evans.

TO THE INSTRUCTORS

To access instructor solutions files please visit pearsonhighered.com/evans and choose the instructor resources option. A variety of instructor resources are available for instructors who register for our secure environment. The files for each chapter, including PowerPoint presentations, are available for download.

As a registered faculty member, you can login directly to download resource files, and receive immediate access and instructions for installing Course Management content to your campus server.

Need help? Our dedicated Technical Support team is ready to assist instructors with questions about the media supplements that accompany this text. Visit: <http://247.pearsoned.com/> for answers to frequently asked questions and toll-free user support phone numbers.

ACKNOWLEDGEMENTS

I would like to thank the following individuals who have provided reviews and insightful suggestions for this edition:

Johannes Ledolter, University of Iowa
J. Morgan Jones, University of North Carolina
Ray Dacey, University of Idaho
Jim Frendewey, Jr., Michigan Technological University
Yasha Crnkovic, SUNY Albany

In addition, I thank the many students over the years who provided numerous suggestions, data sets and problem ideas, and insights into how to better present the material. Finally, appreciation goes to my editor Mark Pfaltzgraff, Ann Pulido, Susie Abraham, and the entire production staff at Pearson Education, for their dedication in developing and producing this text. If you have any suggestions or corrections, please contact me via email at james.evans@uc.edu.

BRIEF CONTENTS

PART I:	STATISTICS AND DATA ANALYSIS	1
Chapter 1	Data and Business Decisions	3
Chapter 2	Displaying and Summarizing Data	32
Chapter 3	Probability Distributions and Applications	73
Chapter 4	Sampling and Estimation	122
Chapter 5	Hypothesis Testing and Statistical Inference	154
Chapter 6	Regression Analysis	190
Chapter 7	Forecasting	235
Chapter 8	Statistical Quality Control	269
PART II:	DECISION MODELING AND ANALYSIS	293
Chapter 9	Building and Using Decision Models	295
Chapter 10	Risk Analysis and Monte Carlo Simulation	329
Chapter 11	Decisions, Uncertainty, and Risk	374
Chapter 12	Queues and Process Simulation Modeling	408
Chapter 13	Linear Optimization	447
Chapter 14	Integer and Nonlinear Optimization	499
Appendix		551

CONTENTS

Preface xvii

PART I: STATISTICS AND DATA ANALYSIS 1

CHAPTER 1 Data and Business Decisions 3

Introduction	3
Statistical Thinking in Business	5
<i>Six Sigma and Statistical Thinking</i>	6
Data in the Business Environment	7
<i>Metrics and Measurement</i>	8
<i>The Balanced Scorecard</i>	8
Sources and Types of Data	10
<i>Data Classification</i>	12
Populations, Samples, and Statistics	14
Using Microsoft Excel	16
<i>Basic Excel Skills</i>	16
<i>Copying Formulas and Cell References</i>	17
<i>Functions</i>	18
<i>Other Useful Excel Tips</i>	21
<i>Excel Add-Ins</i>	21
Working with Data in Excel	22
<i>PivotTables</i>	22
Basic Concepts Review Questions	29
Skill-Building Exercises	29
Problems and Applications	29
Case: A Data Collection and Analysis Project	30

CHAPTER 2 Displaying and Summarizing Data 32

Introduction	33
Displaying Data with Charts and Graphs	33
<i>Column and Bar Charts</i>	33
<i>Line Charts</i>	36
<i>Pie Charts</i>	37
<i>Area Charts</i>	37
<i>Scatter Diagrams</i>	37
<i>Miscellaneous Excel Charts</i>	38
<i>Summary of Graphical Display Methods</i>	40
Descriptive Statistics: Concepts and Applications	41
<i>Excel Descriptive Statistics Tool</i>	43
<i>Measures of Central Tendency</i>	44
<i>Measures of Dispersion</i>	45
<i>Frequency Distributions and Histograms</i>	47

Measures of Shape	50
Data Profiles	52
Correlation	53
Visual Display of Statistical Measures	56
Box-and-Whisker Plots	56
Stem-and-Leaf Displays	57
Dot-Scale Diagrams	60
Descriptive Statistics for Categorical Data	61
Basic Concepts Review Questions	63
Skill-Building Exercises	64
Problems and Applications	64
Case: The Malcolm Baldrige National Quality Award	68
Appendix: Descriptive Statistics: Theory and Computation	70
Mean, Variance, and Standard Deviation	70
Statistical Measures for Grouped Data	70
Skewness and Kurtosis	71
Correlation	71

CHAPTER 3 Probability Distributions and Applications 73

Introduction	74
Probability: Concepts and Applications	74
Basic Probability Rules	75
Random Variables	77
Probability Distributions	77
Discrete Probability Distributions	79
Continuous Probability Distributions	80
Expected Value and Variance of a Random Variable	81
Common Probability Distributions	82
Bernoulli Distribution	83
Binomial Distribution	84
Poisson Distribution	85
Uniform Distribution	87
Normal Distribution	87
Triangular Distribution	92
Exponential Distribution	93
Other Useful Distributions	94
Probability Distributions in PHStat	97
Joint, Marginal, and Conditional Probability Distributions	98
Monte Carlo Methods in Statistics	99
Random Numbers	100
Random Sampling from Probability Distributions	101
Generating Random Variates in Excel	103
Applications of Monte Carlo Methods in Statistics	105
Sampling Distributions and Sampling Error	107
Standard Error of the Mean	110
Applying Sampling Distributions	111
Basic Concepts Review Questions	111
Skill-Building Exercises	112
Problems and Applications	112
Case: Probability Analysis for Quality Measurements	117

Appendix: Probability: Theory and Computation	118
<i>Expected Value and Variance of a Random Variable</i>	118
<i>Binomial Distribution</i>	118
<i>Poisson Distribution</i>	119
<i>Uniform Distribution</i>	119
<i>Normal Distribution</i>	119
<i>Triangular Distribution</i>	120
<i>Exponential Distribution</i>	120
<i>Conditional Probability</i>	120
<i>Bayes's Theorem</i>	121
CHAPTER 4 Sampling and Estimation	122
Introduction	123
Statistical Sampling	123
<i>Sample Design</i>	123
<i>Sampling Methods</i>	124
<i>Errors in Sampling</i>	127
Estimation	127
<i>Point Estimates</i>	128
<i>Unbiased Estimators</i>	129
<i>Interval Estimates</i>	130
Confidence Intervals: Concepts and Applications	130
<i>Confidence Interval for the Mean with Known Population Standard Deviation</i>	131
<i>Confidence Interval for the Mean with Unknown Population Standard Deviation</i>	134
<i>Confidence Interval for a Proportion</i>	136
<i>Confidence Intervals for the Variance and Standard Deviation</i>	136
<i>Confidence Interval for a Population Total</i>	139
Using Confidence Intervals for Decision Making	140
Confidence Intervals and Sample Size	141
Additional Types of Confidence Intervals	144
Basic Concepts Review Questions	145
Skill-Building Exercises	145
Problems and Applications	146
Case: Analyzing a Customer Survey	148
Appendix: Theory and Additional Topics	149
<i>Theory Underlying Confidence Intervals</i>	149
<i>Sampling Distribution of the Proportion</i>	150
<i>Sample Size Determination</i>	151
<i>Additional Confidence Intervals</i>	151
CHAPTER 5 Hypothesis Testing and Statistical Inference	154
Introduction	155
Basic Concepts of Hypothesis Testing	155
<i>Hypothesis Formulation</i>	156
<i>Significance Level</i>	157
<i>Decision Rules</i>	158
<i>Spreadsheet Support for Hypothesis Testing</i>	160
One-Sample Hypothesis Tests	161
<i>One-Sample Tests for Means</i>	161
<i>Using p-Values</i>	163

<i>One-Sample Tests for Proportions</i>	165
<i>Type II Errors and the Power of a Test</i>	167
Two-Sample Hypothesis Tests	170
<i>Two-Sample Tests for Means</i>	170
<i>Two-Sample Test for Means with Paired Samples</i>	172
<i>Two-Sample Tests for Proportions</i>	173
<i>Hypothesis Tests and Confidence Intervals</i>	174
<i>Test for Equality of Variances</i>	175
ANOVA: Testing Differences of Several Means	177
<i>Assumptions of ANOVA</i>	179
<i>Tukey–Kramer Multiple Comparison Procedure</i>	179
Chi-Square Test for Independence	181
Basic Concepts Review Questions	183
Skill-Building Exercises	184
Problems and Applications	184
Case: HATCO, Inc.	188
Appendix: Hypothesis-Testing Theory and Computation	188
<i>Two-Sample Tests for Differences in Means</i>	188
<i>Two-Sample Test for Differences in Proportions</i>	189
<i>Test for Equality of Variances</i>	189
<i>Theory of Analysis of Variance</i>	189

CHAPTER 6 Regression Analysis 190

Introduction	191
Simple Linear Regression	192
<i>Least-Squares Regression</i>	194
<i>Coefficient of Determination</i>	198
<i>Application of Regression to Investment Risk</i>	198
Interpreting Regression Analysis Output	201
<i>Regression Statistics</i>	201
<i>Hypothesis Testing</i>	202
<i>Residual Analysis</i>	202
<i>Confidence and Prediction Intervals</i>	204
Assumptions of Regression Analysis	204
Multiple Linear Regression	207
<i>Interpreting Results from Multiple Linear Regression</i>	208
<i>Correlation and Multicollinearity</i>	210
Building Good Regression Models	211
<i>Stepwise Regression</i>	214
<i>Best-Subsets Regression</i>	215
<i>The Art of Model Building in Regression</i>	216
Regression with Categorical Independent Variables	219
<i>Categorical Variables with More Than Two Levels</i>	222
Regression Models with Nonlinear Terms	225
Basic Concepts Review Questions	227
Skill-Building Exercises	227
Problems and Applications	228
Case: HATCO	231

Appendix: Regression Theory and Computation	232
<i>Regression as Analysis of Variance</i>	232
<i>Standard Error of the Estimate</i>	233
<i>Adjusted R-Square</i>	233
<i>Confidence Intervals</i>	233
<i>Prediction Intervals</i>	234
CHAPTER 7 Forecasting	235
Introduction	236
Qualitative and Judgmental Methods	237
<i>Historical Analogy</i>	237
<i>The Delphi Method</i>	238
<i>Indicators and Indexes for Forecasting</i>	238
Statistical Forecasting Models	239
Forecasting Models for Stationary Time Series	241
<i>Moving Average Models</i>	241
<i>Error Metrics and Forecast Accuracy</i>	244
<i>Exponential Smoothing Models</i>	246
Forecasting Models for Time Series with Trend and Seasonality	249
<i>Models for Linear Trends</i>	249
<i>Models for Seasonality</i>	249
<i>Models for Trend and Seasonality</i>	249
Choosing and Optimizing Forecasting Models Using <i>CB Predictor</i>	250
Regression Models for Forecasting	255
<i>Autoregressive Forecasting Models</i>	256
<i>Incorporating Seasonality in Regression Models</i>	258
<i>Regression Forecasting with Causal Variables</i>	260
The Practice of Forecasting	262
Basic Concepts Review Questions	264
Skill-Building Exercises	264
Problems and Applications	264
Case: Energy Forecasting	266
Appendix: Advanced Forecasting Models—	
Theory and Computation	266
<i>Double Moving Average</i>	266
<i>Double Exponential Smoothing</i>	267
<i>Additive Seasonality</i>	267
<i>Multiplicative Seasonality</i>	267
<i>Holt–Winters Additive Model</i>	268
<i>Holt–Winters Multiplicative Model</i>	268
CHAPTER 8 Statistical Quality Control	269
Introduction	269
The Role of Statistics and Data Analysis in Quality Control	270
Statistical Process Control	271
<i>Control Charts</i>	272
<i>\bar{x}- and R-Charts</i>	273
Analyzing Control Charts	278
<i>Sudden Shift in the Process Average</i>	279
<i>Cycles</i>	279

<i>Trends</i>	279
<i>Hugging the Center Line</i>	280
<i>Hugging the Control Limits</i>	280
Control Charts for Attributes	282
<i>Variable Sample Size</i>	284
Process Capability Analysis	287
Basic Concepts Review Questions	289
Skill-Building Exercises	289
Problems and Applications	290
Case: Quality Control Analysis	291

PART II: DECISION MODELING AND ANALYSIS 293

CHAPTER 9 Building and Using Decision Models 295

Introduction	295
Decision Models	296
Model Analysis	299
<i>What-If Analysis</i>	300
<i>Model Optimization</i>	304
Tools for Model Building	306
<i>Logic and Business Principles</i>	307
<i>Common Mathematical Functions</i>	308
<i>Data Fitting</i>	308
<i>Spreadsheet Engineering</i>	310
Modeling Examples	311
<i>Gasoline Consumption</i>	311
<i>Revenue Model</i>	311
<i>New Product Development</i>	313
Models Involving Uncertainty	313
<i>Newsvendor Model</i>	314
<i>Monte Carlo Simulation</i>	314
<i>Fitting Probability Distributions to Data</i>	317
Model Assumptions, Complexity, and Realism	319
Basic Concepts Review Questions	322
Skill-Building Exercises	322
Problems and Applications	322
Case: An Inventory Management Decision Model	327

CHAPTER 10 Risk Analysis and Monte Carlo Simulation 329

Introduction	329
Monte Carlo Simulation Using <i>Crystal Ball</i>	331
<i>A Financial Risk Analysis Simulation</i>	331
<i>Defining Model Inputs</i>	331
<i>Running a Simulation</i>	338
<i>Saving Crystal Ball Runs</i>	339
<i>Analyzing Results</i>	339
<i>Crystal Ball Reports and Data Extraction</i>	346
<i>Crystal Ball Functions and Tools</i>	347

Applications of Monte Carlo Simulation	349
<i>Newsvendor Model</i>	349
<i>Overbooking Model</i>	353
<i>Cash Budgeting</i>	354
<i>New Product Development Model</i>	359
<i>Project Management</i>	362
Basic Concepts Review Questions	368
Skill-Building Exercises	368
Problems and Applications	369
Case: The Bellin Project	373
CHAPTER 11 Decisions, Uncertainty, and Risk	374
Introduction	375
Decision Making without Uncertainty and Risk	375
<i>Decisions Involving a Single Alternative</i>	376
<i>Decisions Involving Non-Mutually Exclusive Alternatives</i>	376
<i>Decisions Involving Mutually Exclusive Alternatives</i>	377
Decisions Involving Uncertainty and Risk	378
<i>Making Decisions with Uncertain Information</i>	378
<i>Decision Strategies</i>	379
<i>Risk and Variability</i>	381
Expected Value Decision Making	383
<i>Opportunity Loss and Expected Value of Perfect Information</i>	385
<i>Analysis of Portfolio Risk</i>	386
